Coal Energy Conversion Integrated with Deep Saline Aquifer Carbon Storage Via Combustion in Supercritical Water John Russell Heberle, 2011 Carbon capture and sequestration (CCS) technologies aim to allow the continued use of fossil fuels by outputting carbon in a form other than atmospheric CO₂. Several types of geologic reservoirs are considered as alternatives; of these, deep saline aquifers have the largest potential storage capacity worldwide. Unfortunately, neat CO₂ injected into an aquifer is less dense than the native brine. The resulting buoyancy presents a potential for leakage from the storage formation, and, ultimately, to the atmosphere. This work describes a method for using coal to produce electricity that creates a pre-equilibrated brine/CO₂ solution for injection into a saline aquifer. Such solutions are more dense than the original brine, and present no potential for buoyancy-driven leakage. A concept is introduced in which coal is oxidized in high-pressure, high-temperature water drawn from a saline aquifer in a process known as supercritical water oxidation (SCWO). Combustion in supercritical water and subsequent aquifer storage of all coal-derived fluid effluent removes the need for CO₂ separation and compression steps common in other coal-fired designs with CCS. The properties of supercritical water ($T > 647 \text{ K}$, $P > 221 \text{ bar}$) are described that make it a suitable combustion medium---in contrast to water at ambient conditions. A conceptual plant is developed that includes systems to manage brine and coal (a solid, complex fuel). The system uses a heat engine for work extraction from hot combustion products, and so may be called a supercritical water oxidation, indirectly-fired combined cycle, or SCWO/IFCC. Next, a thermodynamic model is developed to evaluate the performance of this plant and compare it to other coal-fired designs with CCS. Next, a laboratory-scale combustor, constructed to study flames in supercritical water, is described. This apparatus follows from previous supercritical water reactors that were built to study

the destruction of hazardous wastes, but is targeted toward the development of a combustor suitable for use in a power plant. Challenges encountered operating systems that are simultaneously high-pressure and high-temperature are discussed, including the use of several types of metal seals. Autoignition results from initial combustion experiments are presented and compared to previous work.

Embedded Cooling Of Electronic Devices: Conduction, Evaporation, And Single- And Two-phase Convection Madhusudan Iyengar, Justin A Weibel, Mehdi Asheghi, 2024-01-10 This book is a comprehensive guide on emerging cooling technologies for processors in microelectronics. It covers various topics such as chip-embedded two-phase cooling, monolithic microfluidic cooling, numerical modeling, and advances in materials engineering for conduction-limited direct contact cooling, with a goal to remedy high heat flux issues. The book also discusses the co-design of thermal and electromagnetic properties for the development of light and ultra-high efficiency electric motors. It provides an in-depth analysis of the scaling limits, challenges, and opportunities in embedded cooling, including high power RF amplifiers and self-emissive and liquid crystal displays. Its analysis of emerging cooling technologies provides a roadmap for the future of cooling technology in microelectronics. This book is a good starting point for the electrical and thermal engineers, as well as MS and PhD students, interested in understanding and collaboratively tackling the complex and multidisciplinary field of microelectronics device (embedded) cooling. A basic knowledge of heat conduction and convection is required.

Mechanical Engineers' Handbook, Volume 3 Myer Kutz, 2015-03-02 Full coverage of manufacturing and management in mechanical engineering Mechanical Engineers' Handbook, Fourth Edition provides a quick guide to specialized areas that engineers may encounter in their work, providing access to the basics of each and pointing toward trusted resources for further reading, if needed. The book's accessible information offers discussions, examples, and analyses of the topics covered, rather than the straight data, formulas, and calculations found in other handbooks. No single engineer can be a specialist in all areas that they are called upon to work in. It's a discipline that covers a broad range of topics that are used as the building blocks for specialized areas, including aerospace, chemical, materials, nuclear, electrical, and general engineering. This third volume of Mechanical Engineers' Handbook covers Manufacturing & Management, and provides accessible and in-depth access to the topics encountered regularly in the discipline: environmentally benign manufacturing, production planning, production processes and equipment, manufacturing systems evaluation, coatings and surface engineering, physical vapor deposition, mechanical fasteners, seal technology, statistical quality control, nondestructive inspection, intelligent control of material handling systems, and much more. Presents the most comprehensive coverage of the entire discipline of Mechanical Engineering Focuses on the explanation and analysis of the concepts presented as opposed to a straight listing of formulas and data found in other handbooks Offers the option of being purchased as a four-book set or as single books Comes in a subscription format through the Wiley Online Library and in electronic and other

custom formats Engineers at all levels of industry, government, or private consulting practice will find Mechanical Engineers' Handbook, Volume 3 an off-the-shelf reference they'll turn to again and again.

Rubbers in Contact with Food J.A. Sidwell, M.J. Forrest, 2000 This report provides an excellent, clearly written report on the state-of-the-art of food contact elastomers. In the UK, the Ministry of Agriculture Fisheries and Food (MAFF), industry and Rapra have combined forces to study the issues surrounding rubbers in contact with food. A survey has been carried out of the food processing industry to determine which rubber products come into contact with food, contact area, duration of contact and temperature of contact. The results of this survey are found in the report and a compilation of data tables on each food industry studied is included as an appendix. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading.
