Get size of all tables in database - Stack Overflow Oct 25, 2011 · After some searching, I could not find an easy way to get information on all of the tables. There is a handy stored procedure named `sp_spaceused` that will return all of the space used by the database. **Understanding `__get__` and `__set__` and Python descriptors** Sep 26, 2010 · Non-data descriptors, instance and class methods, get their implicit first arguments (usually named `self` and `cls`, respectively) from their non-data descriptor method, `__get__` - and this is how static methods know not to have an implicit first argument. **git config - How to know the git username and email saved during ...** Considering what @Robert said, I tried to play around with the `config` command and it seems that there is a direct way to know both the name and email. To know the username, type: `git config user.name` To know the email, type: `git config user.email` These two output just the name and email respectively and one doesn't need to look through the whole list. Comes in handy. Understanding `.get()` method in Python - Stack Overflow The sample code in your question is clearly trying to count the number of occurrences of each character: if it already has a count for a given character, `get` returns it (so it's just incremented by one), else `get` returns 0 (so the incrementing correctly gives 1 ... *Windows Kill Process By PORT Number - Stack Overflow* Mar 23, 2019 · Option 2 PowerShell `Get-Process -Id (Get-NetTCPConnection -LocalPort portNumber).OwningProcess` cmd C:\> `netstat -a -b` (Add `-n` to stop it trying to resolve hostnames, which will make it a lot faster.) `-a` Displays all connections and listening ports. `-b` Displays the executable involved in creating each connection or listening port. **c# - Get ConnectionString from appsettings.json instead of being ...** Aug 21, 2017 · That's all you need to get the configuration to be used by the design time services like migrations. Here's more detail on what's going on deep down in there: **Why doesn't list have safe `"get"` method like dictionary?** Ultimately it probably doesn't have a safe `.get` method because a dict is an associative collection (values are associated with names) where it is inefficient to check if a key is present (and return its value) without throwing an exception, while it is super trivial to avoid exceptions accessing list elements (as the `len` method is very fast). **How do I find out which process is listening on a TCP or UDP port ...** The default output of `Get-NetTCPConnection` does not include Process ID for some reason and it is a bit confusing. However, you could always get it by formatting the output. The property you are looking for is `OwningProcess`. If you want to find out the ID of the process that is listening on port 443, run this command: **How do I get into a Docker container's shell? - Stack Overflow** May 11, 2015 · `docker debug` It allows you to get a shell (bash/fish/zsh) into any

container. It also works for stopped containers and images. Essentially it's a replacement of `docker exec -it sh` but with more features and less constraints (eg the debug shell has an `install` command to add further tools). **What is the difference between PUT, POST, and PATCH?** Jun 27, 2015 · Difference between PUT, POST, GET, DELETE and PATCH in HTTP Verbs: The most commonly used HTTP verbs POST, GET, PUT, DELETE are similar to CRUD (Create, Read, Update and Delete) operations in database. We specify these HTTP verbs in the capital case. Below is the comparison between them. Create - POST Read - GET Update - PUT Delete - DELETE PATCH: Submits a partial modification to a resource ...
