Digital Research Methods and the Diaspora Dang Nguyen, 2023-11-29 The computational turn in the social sciences

and humanities has generated much excitement about the potential to refresh our approaches to the study of the techno-social. From natively digital to digitised data, researchers of digital diasporas increasingly find themselves working with a range of disparate digital objects. These digital objects can include anything from hyperlink to timestamps, from platform behavioural metrics such as react, share, or retweet to different media formats such as text, image, pre-recorded or livestreamed videos. Taking these disparate objects into account, this book introduces digital methods as research strategies not only for dealing with the ephemeral and unstable nature of tracing the diaspora with digital data, but also for reconceptualizing digital diasporas as assemblages and networks of more-than-human actors. The book also introduces a range of theoretical perspectives and methodological techniques to studying digital diasporas as contingent and processual hybrid collectives of heterogeneous material, cultural, and practice-based assemblages. This book will be essential reading for students and scholars interested in the digital space and transnational communities.

Syntax, the brain, and linguistic theory: a critical reassessment, 2024-07-23 Syntax refers both to the structure of sentences and the underlying combinatorial capacity to generate this structure. For some time, neurolinguistic research on syntax was heavily influenced by theoretical linguistic approaches, which characterize in detail the nature of syntactic representations. A rough consensus has been that the primary region supporting syntax is Broca's area, and that syntactic deficits in aphasia exist primarily due to damage or degeneration of this region, commonly occurring in Broca's aphasia and nonfluent/agrammatic PPA. With respect to temporal dynamics of syntactic processing, neurophysiological research on syntax focused on specific event-related potentials such as the ELAN and P600, thought to index phrase structure building and syntactic reanalyses. However, the research landscape has changed substantially in the last several years with new methodologies and theoretical perspectives, and there is little consensus on the neurobiological foundations of syntax or the role of linguistic theory in guiding research. The goal of this Research Topic is to reassess our understanding of syntax and the brain in light of these developments. Specifically, it is designed to address the following set of major questions:

New Empirical Perspectives on Translation and Interpreting Lore Vandevor, Joke Daems, Bart Defrancq, 2019-12-06

Drawing on work from both eminent and emerging scholars in translation and interpreting studies, this collection offers a critical reflection on current methodological practices in these fields toward strengthening the theoretical and empirical ties between them. Methodological and technological advances have pushed these respective areas of study forward in the last few decades, but advanced tools, such as eye tracking and keystroke logging, and insights from their use have often remained in isolation and not shared across disciplines. This volume explores empirical and theoretical challenges across these areas and the subsequent methodologies implemented to address them and how they might be mutually applied across translation and interpreting studies but also brought together toward a coherent empirical theory of translation and interpreting studies. Organized around three key themes—target-text orientedness, source-text orientedness, and translator/interpreter-orientedness—the book takes stock of both studies of translation and interpreting corpora and processes in an effort to answer such key questions, including: how do written translation and interpreting relate to each other? How do technological advances in these fields shape process and product? What would an empirical theory of translation and interpreting studies look like? Taken together, the collection showcases the possibilities of further dialogue around methodological practices in translation and interpreting studies and will be of interest to students and scholars in these fields.

The Voynich Manuscript as an Example of Oligo-Agglutinative Pasigraphy, Vol. I: A Fuzzy Set Approach to Decryption

Steve Bolton, Class III problems are considered practically unsolvable in cryptology, but none has resisted cryptanalytic attack as persistently as the Voynich Manuscript. In the first installment of this 4-volume set, we present the linguistic and affix analysis that preceded the first complete but approximate translation of the entire manuscript. This contrasts with the piecemeal approach of all prior solutions that resulted in wildly divergent translations of minuscule selections of the text. This systemic attack on the entirety of the text and its unusual distributional features (such as extreme platykurtia, which forbid translation into any natural language) resulted first in superior transcription stability and an equally stable symbol set, based on intensive statistical analysis. The encoding scheme employs a 20-22 letter alphabetic script that most closely resembles a slot-and-filler, top-down, a priori pasigraphic system, with oligo-agglutinative features that are currently only considered a theoretical possibility in the linguistics field. The intricate affixing system is based mainly on precise placement of single letters to denote case roles, semantic classes and 3 primary parts of speech (exhibiting a strong noun surfeit). At the phrase level we find dominant SOV order and head-final, dependent-marked grammar compatible with heavily formatted, inline pharmaceutical lists; these result in short ranges of actionable information, which no competing solution can claim. Plant descriptions are demoted in comparison to other herbals, in favor of processing and dispensing details. This

approximate solution is based on fuzzy set analysis techniques integrated with linguistic universals, a wide range of common statistics (Pareto and Sukhotin scores, Zipf slopes, Indexes of Coincidence, Agglutination and Synthesis and dozens of others) and many home-brewed fuzzy algorithms implemented in T-SQL and VB.Net, after the inadequacy of many advanced data mining techniques was demonstrated. Our methodology was validated when the project reached an inflection point, beyond which we were able to predict the identities and properties of plants based on the text alone. The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript, far beyond that of other published solutions. An incredible 100% of the 133 identified plants have dermatological uses. These can be divided into prominent subtopics like treatment of bites; anthelmintics; rheumatism and other musculo-skeletal ailments; inflammatory skin disorders; external and possibly menstrual bleeding; excision of blemishes; application of cosmetics; and cures dispensable in baths. The centerpiece of the manuscript is the Rosette Folio, which depicts the grand design of a medieval bathhouse, keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy. Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases, such as skin color based diagnostic criteria, remedies/solutions, problems/diseases, plant parts and the like. These findings require 2 volumes to demonstrate and another volume of data and other supplementary material. Despite this complexity, they culminate in a drastic simplification of the script and the first-ever comprehensive translation of the Voynich Manuscript in Volume IV, albeit at low resolution.

English Algorithmic Grammar Hristo Georgiev, 2005-11-21 The ultimate goal of Computational Linguistics is to teach the computer to understand Natural Language. This research monograph presents a description of English according to algorithms which can be programmed into a computer to analyse natural language texts. The algorithmic approach uses series of instructions, written in Natural Language and organised in flow charts, with the aim of analysing certain aspects of the grammar of a sentence. One problem with text processing is the difficulty in distinguishing word forms that belong to parts of speech taken out of context. In order to solve this problem, Hristo Georgiev starts with the assumption that every word is either a verb or a non-verb. From here he presents an algorithm which allows the computer to recognise parts of speech which to a human would be obvious though the meaning of the words. Emphasis for a computer is placed on verbs, nouns, participles and adjectives. English Algorithmic Grammar presents information for computers to recognise tenses, syntax, parsing, reference, and clauses. The final chapters of the book examine the further applications of an algorithmic approach to English grammar, and suggests ways in which the computer can be programmed to recognise meaning. This is an innovative, cutting-edge approach to computational linguistics that will be essential reading for academics researching

computational linguistics, machine translation and natural language processing.

Routledge Course in Modern Mandarin Chinese Level 2 Traditional Claudia Ross, Baozhang He, Pei-chia Chen, Meng Yeh, 2013-01-11 The Routledge Course in Mandarin Chinese is a two-year undergraduate course for students with no prior background in Chinese study. Grammar in Literature Susan Lavender, Stavroula Varella, 2022-06-02 This textbook familiarizes students with grammatical concepts of the English language and develops skills to apply grammar to creative writing and the study of literature. Students take an interactive 'learn-by-doing' approach to the mechanics of language and explore the creative uses of grammar. Experimenting with their own linguistic and creative skills, they come to appreciate the importance of language not only as a means of communication but also as an essential part of creative practice and literary composition. This applied

approach to learning about grammar will be a valuable resource for students of English Literature and Creative Writing who may already be good users of grammar but not fully aware of its significance for communication and creativity.
