I would not recommend using it with classes using linear inheritance, where it's just useless overhead. *java - how to Call super constructor in Lombok - Stack Overflow* Apr 20, 2015 · how to Call super constructor in Lombok Asked 10 years, 4 months ago Modified 1 year, 1 month ago Viewed 339k times [coding style - Using "super" in C++ - Stack Overflow](#) As for chaining super::super, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). [What is a difference between <? super E> and <? extends E>?](#) Sep 2, 2009 · The first (<? super E>) says that it's "some type which is an ancestor (superclass) of E"; the second (<? extends E>) says that it's "some type which is a subclass of E". (In both cases E itself is okay.) So the constructor uses the ? extends E form so it guarantees that when it fetches values from the collection, they will all be E or some subclass (i.e. it's compatible). The ... [oop - What does 'super' do in Python? - Stack Overflow](#) Nov 3, 2015 · The one without super hard-codes its parent's method - thus it has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... **Python: 'super' object has no attribute 'attribute_name'** After the base class's __init__ ran, the derived object has the attributes set there (e.g. some_var) as it's the very same object as the self in the derived class' __init__. You can and should just use self.some_var everywhere. super is for accessing stuff from base classes, but instance variables are (as the name says) part of an instance, not part of that instance's class. *python - replace block within { { super () } } - Stack Overflow* In the child template, I would like to include everything that was in the head block from the base (by calling { { super() } }) and include some additional things, yet at the same time replace the title block within the super call. [AttributeError: 'super' object has no attribute - Stack Overflow](#) Jul 9, 2018 · I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: AttributeError: 'super' object has no attribute do_something class Parent: def __init__(self):... **super () in Java - Stack Overflow** Sep 22, 2010 · super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. **Understanding Python super() with __init__() methods** Feb 23, 2009 · super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple

inheritance, where all sorts of fun stuff can happen.
