Occupational Therapy in Australia Ted Brown, Helen M. Bourke-Taylor, Stephen Isbel, Reinie Cordier, Louise Gustafsson, 2021-04-18 This ground-breaking text provides a comprehensive guide to the occupational therapy profession in Australia, from the profession's role in the health care system to the broad scope and nature of its practice. The book is organised into three sections: the Australian context; professional issues and practice issues. Contributions from 80 Australian occupational therapists working in education, research, policy and practice bring together the most relevant and up-to-date information in this essential book. The authors begin the Australian environment section with an overview of the Australian health care system, a history of occupational therapy in Australia and the role of Australian occupational therapy professional associations and regulatory bodies. The values and philosophy of occupational therapy, ethical and legal aspects of practice and the role of occupational therapy in population health and health promotion are considered next. The professional issues covered in the book include using effective communication skills, client-centred practice principles and a strength-based approach when working with individuals, families, groups, communities, organisations and populations. Additional topics, including occupational science, the education of occupational therapists, research in occupational therapy, evidence-based practice clinical reasoning and occupational therapy models of practice, are also covered in the middle section of the book. *Occupational Therapy in Australia: Practice and Process Issues* is established as the essential practice reference for students, practitioners and educators in Australia. This second edition has been revised and updated throughout and includes new chapters on communication skills, environmental aspects of occupational therapy practice and decolonising occupational therapy through a strength-based approach to practice.

Developing Learning Professionals Stephen Billett, Amanda J. Henderson, 2011-02-04 In higher education institutions across the globe, there is a growing interest in integrating classroom learning with experience in practice settings. This interest is the result of an increased emphasis on courses that prepare students for specific occupations in the hopes that upon graduation students will be job-ready. *Developing Learning Professionals: Integrating Experiences in University and Practice Settings* explores how the integration of student experiences across university and practice settings might best be used to produce college graduates who are adept, critical practitioners. To do so, it draws on the findings of a series of projects in Australia that investigated diverse aspects of work-related learning. Through these projects, a range of scholars and researchers consider different aspects of this educational initiative within the same national higher education context.

They address pedagogic and curriculum practices, institutional arrangements and partnerships of varying kinds, and a consolidated set of perspectives.

Manual of Simulation in Healthcare Richard H. Riley, 2008 Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anesthesia.

Leadership Pearls in Healthcare Ralph Junckerstorff, Sara Baqar, 2025-05-26 This book brings together the insights of some of Australia's most respected healthcare professionals and provides a resource for readers new to the concept of leadership and those currently in leadership or managerial positions. Administrative (as opposed to clinical) leadership and the skills required to be good at it, are not well covered in the medical, nursing or allied health curricula. Despite this, healthcare workers are often required to take up leadership/managerial roles, often with little notice and minimal training. In contrast to the scientific nature of clinical medicine, leadership is a management concept and open to different interpretations. Clinicians who have the potential to be great leaders may shy away from administrative leadership positions because of limited understanding and training in what leadership entails. Unfortunately, not all great clinicians turn out to be great leaders/managers. *Leadership Pearls in Healthcare* delves deep into the minds of eminent leaders across all disciplines within the Australian healthcare system and discover the most valuable lessons they have learnt during their leadership journey. To demonstrate how they can be applied in practice, each leadership pearl will be presented in a scenario/situation-based format, followed by a discussion with relevant references. Following this, authors will include closely related practical tips as 'Other Gems'. Designed in an engaging and user-friendly format, this book is accessible to a wide audience, including current and emerging leaders in healthcare, students in medical, nursing, allied health, recently graduated doctors, nurses,

and allied health professionals, as well as current and emerging leaders outside of healthcare.

International Handbook of Research in Professional and Practice-based Learning Stephen Billett, Christian Harteis, Hans Gruber, 2014-07-15 The International Handbook of Research in Professional and Practice-based Learning discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and shaped through their professional environment and practices. Moreover, in turn, the practice and processes of learning through practice are shaped by their development, all of which are required to be understood through a range of research orientations, methods and findings. This Handbook will appeal to academics working in fields of professional practice, including those who are concerned about developing these capacities in their students. In addition, students and research students will also find this Handbook a key reference resource to the field.

Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging M. A. Hayat, 2014-12-31 Volume 6 provides coverage of the mechanisms of regulation of autophagy; intracellular pathogen use of the autophagy mechanism; the role of autophagy in host immunity; and selective autophagy. Attention is given to a number of mechanistic advances in the understanding of regulation, particularly the importance of nutrient availability; microRNAs; and cross-talk with other protein degradation pathways. Intracellular pathogen repurposing of autophagy for pathogenic benefit is also provided, with coverage of Herpesvirus protein modulation of autophagy; the varicella-zoster virus and the maintenance of homeostasis; and the relationship between autophagy and the hepatitis b virus. The significance of autophagy in host defense is elucidated, providing a specific focus on facilitation of antigen presentation; participation in thymic development; and the sharing of regulatory nodes with innate immunity. Selective autophagy for the degradation of mitochondria and endocytosed gap junctions are also explored. This book is an asset to newcomers as a concise overview of the regulation of autophagy, its role in host defense and immunity, and selective autophagy, while serving as an excellent reference for more experienced scientists and clinicians looking to update their knowledge. This cohesive structure provides an effective framework for detailed insight into this new frontier. Edited by Dr. Anthony Atala, one of the foremost experts in the field, and his co-editor Dr. Sean V. Murphy, this volume is a definitive work for stem cell research and its future implications. It is a key resource for all stem cell researchers, clinicians, and government and industry staff working in this dynamic and exciting field.

Rethinking Second Language Learning Marisa Cordella, Hui Huang, 2016-05-19 This book evaluates a project where formal classroom learning of a second language was supplemented with informal, natural interactions with older native speakers of the target language, delivering a number of pedagogical and societal benefits. The authors introduce a model of intergenerational, intercultural encounters which aims to promote the use of community language resources; enrich the experiences of young learners; foster greater understanding between generations; break down cultural stereotypes;

encourage appreciation of different cultures and enhance the quality of life and community engagement of older people with a bi/multilingual background. It draws on theories of language acquisition, discourse analysis and psychosocial perspectives to propose a model of language learning for students that can be used for any language or locality. It is therefore an essential resource for graduate students, researchers and language teachers as well as for education, aged and youth care policy makers, practitioners and community services workers who are interested in innovative language pedagogy.
