Get size of all tables in database - Stack Overflow Oct 25, 2011 · After some searching, I could not find an easy way to get information on all of the tables. There is a handy stored procedure named `sp_spaceused` that will return all of the space used by the database. Why doesn't list have safe "get" method like dictionary? Ultimately it probably doesn't have a safe `.get` method because a dict is an associative collection (values are associated with names) where it is inefficient to check if a key is present (and return its value) without throwing an exception, while it is super trivial to avoid exceptions accessing list elements (as the `len` method is very fast). *How do I get into a Docker container's shell? - Stack Overflow* May 11, 2015 · `docker debug` It allows you to get a shell (bash/fish/zsh) into any container. It also works for stopped containers and images. Essentially it's a replacement of `docker exec -it sh` but with more features and less constraints (eg the debug shell has an `install` command to add further tools). *git config - How to know the git username and email saved during ...* Considering what @Robert said, I tried to play around with the `config` command and it seems that there is a direct way to know both the name and email. To know the username, type: `git config user.name` To know the email, type: `git config user.email` These two output just the name and email respectively and one doesn't need to look through the whole list. Comes in handy. **Understanding `__get__` and `__set__` and Python descriptors** Sep 26, 2010 · Non-data descriptors, instance and class methods, get their implicit first arguments (usually named `self` and `cls`, respectively) from their non-data descriptor method, `__get__` - and this is how static methods know not to have an implicit first argument. **Understanding `.get()` method in Python - Stack Overflow** The sample code in your question is clearly trying to count the number of occurrences of each character: if it already has a count for a given character, `get` returns it (so it's just incremented by one), else `get` returns 0 (so the incrementing correctly gives 1 ... How do I find out which process is listening on a TCP or UDP port ... The default output of `Get-NetTCPConnection` does not include Process ID for some reason and it is a bit confusing. However, you could always get it by formatting the output. The property you are looking for is `OwningProcess`. If you want to find out the ID of the process that is listening on port 443, run this command: *Windows Kill Process By PORT Number - Stack Overflow* Mar 23, 2019 · `Option 2 PowerShell Get-Process -Id (Get-NetTCPConnection -LocalPort portNumber).OwningProcess cmd C:\> netstat -a -b` (Add `-n` to stop it trying to resolve hostnames, which will make it a lot faster.) `-a` Displays all connections and listening ports. `-b` Displays the executable involved in creating each connection or listening port. c# - Get ConnectionString from
