Construire en acier Helmut C. Schultz, Werner Sobek, Karl J. Habermann, 2003-01-01 L'avènement au XIXe siècle du matériau acier a fondamentalement contribué à l'évolution de l'architecture, en ouvrant des possibilités jusqu'alors insoupçonnées dans le domaine des portées et des hauteurs de bâtiments. De nos jours, la technique de construction incite à réaliser des performances toujours plus remarquables et à rechercher de nouvelles formes de bâtiments : le matériau acier a affranchi la construction de presque toutes les limites. Les auteurs de Construire en acier se sont proposés de centrer leur ouvrage autour du thème de l'unité de la conception et de la construction, et de présenter clairement les assemblages appropriés à ce type de construction, en fonction du matériau, du traitement, de la fabrication et du montage de l'ouvrage. Largement illustré, ce livre a l'ambition d'être à la fois un manuel et un traité sur la construction en acier. Il offre aux architectes et aux ingénieurs ainsi qu'aux étudiants une référence précieuse sur leur travail de concepteurs ou de constructeurs.

Dictionary of Building and Civil Engineering ,2013-12-20 In the last few decades civil engineering has undergone substantial technological change which has, naturally, been reflected in the terminology employed in the industry. Efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general, and that of civil engineering in particular. The publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field, as well as by the lack of suitable updated bilingual dictionaries. This Dictionary contains some 14.000 English terms together with their German, French, Dutch and Russian equivalents, which are used in the main branches of civil engineering and relate to the basic principles of structural design and calculations (the elasticity theory, strength of materials, soil mechanics and other allied technical disciplines); to buildings and installations, structures and their parts, building materials and prefabrications, civil engineering technology and practice, building and road construction machines, construction site equipment, housing equipment and fittings (including modern systems of air conditioning); as well as to hydrotechnical and irrigation constructions. The Dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning, as well as airfield, railway and underground construction. The Dictionary does not list trade names of building materials, parts and machines or the names of chemical compounds. Nor does it give adverbial, adjective or verbal terms.

Jacques Rivette Mary M. Wiles,2012-01-19 As a pioneer of the French New Wave, Jacques Rivette was one of a group of directors who permanently altered the world's perception of cinema by taking the camera out of the studios and into the streets. His films, including Paris nous appartient, Out 1: Noli me tangere, Céline et Julie vont en bateau--Phantom Ladies Over Paris, La belle noiseuse, Secret défense, and Va savoir are extraordinary combinations of intellectual depth, playfulness, and sensuous beauty. In this study of Rivette, Mary M. Wiles provides a thorough account of the director's career from the burgeoning French New Wave to the present day, focusing on the theatricality of Rivette's films and his explorations of the relationship between cinema and fine arts such as painting, literature, music, and dance. Wiles also explores the intellectual interests that shaped Rivette's approach to film, including Sartre's existentialism, Barthes's structuralism, and the radical theater of the 1960s. The volume concludes with Wiles's insightful interview with Rivette.

The Construction of Gothic Cathedrals John Fitchen,1981 Describes the process of erecting the great cathedrals in the Gothic era. This text explains the building equipment and falsework needed, the actual operations undertaken, and the

sequence of these operations as far as they can be deduced from manuscript illuminations and pictorial representations.

Migration and Climate Change Jamila Alaktif, Stéphane Callens, 2020-07-16 This book aims to provide a better understanding of how human cultures interact with climate change over an extended period of time. It is an analysis of the past and present, ranging from the first human migration to contemporary organizational management using an approach developed by Michel Foucault, defined as: the research, the practice, the experience, by which the subject operates on themselves the transformations necessary in order to have access to the truth. This book consists of two parts. The first part focuses on climate change and the substantial effects it had on the first human cultures. The second part explores the role of organizations and the development of new frameworks for action in more recent times of anthropogenic climate change.

River Flow 2020 Wim Uijttewaal, Mário J. Franca, Daniel Valero, Victor Chavarrias, Clàudia Ylla Arbós, Ralph Schielen, Alessandra Crosato, 2020-08-27 Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water, navigation, energy, ecosystem services, and flood conveyance. Because of this essential role, mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts. This has resulted in often highly engineered rivers with a narrow set of functions. In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes. River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics, consequences of climate change, and urbanisation. River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics, River Flow 2020, organised under the auspices of the Committee on Fluvial Hydraulics of the International

Association for Hydro-Environment Engineering and Research (IAHR). What should have been a lively physical gathering of researchers, students and practitioners, was converted into an online event as the COVID-19 pandemic hindered international travelling and large gatherings of people. Nevertheless, the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event. Since its first edition in 2002, in Louvain-la-Neuve, this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals. This is highlighted by the large number of contributions applying for the Coleman award for young researchers, and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students. River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics, and contains five major themes which are focus of research in the fluvial environment: river fundamentals, the digital river, the healthy river, extreme events and rivers under pressure. Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest. The contributions will therefore be of interest to academics in hydraulics, hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering.

Geotechnical Engineering Challenges to Meet Current and Emerging Needs of Society Nuno Guerra, Manuel Matos Fernandes, Cristiana Ferreira, António Gomes Correia, Alexandre Pinto, Pedro Sêco Pinto, 2024-09-17 'Geotechnical Engineering Challenges to Meet Current and Emerging Needs of Society' includes the papers presented at the XVIII European Conference on Soil Mechanics and Geotechnical Engineering (Lisbon, Portugal, August 26 to 30th, 2024). The papers aim to contribute to a better understanding of problems and solutions of geotechnical nature, as well as to a more adequate management of natural resources. Case studies are included to better disseminate the success and failure of Geotechnical Engineering practice. The peer-reviewed articles of these proceedings address the six main topics: New developments on structural design Geohazards Risk analysis and safety evaluation Current and new construction methods Environment, water, and energy Future city world vision With contributions from academic researchers and industry practitioners from Europe and abroad, this collection of conference articles features an interesting and wide-ranging combination of innovation, emerging technologies and case histories, and will be of interest to academics and professionals in Soil Mechanics and Geotechnical Engineering.
