Smart Product Engineering Michael Abramovici,Rainer Stark,2013-03-14 The collection of papers in this book comprises the proceedings of the 23rd CIRP Design Conference held between March 11th and March 13th 2013 at the Ruhr-Universität Bochum in Germany. The event was organized in cooperation with the German Academic Society for Product Development - WiGeP. The focus of the conference was on »Smart Product Engineering«, covering two major aspects of modern product creation: the development of intelligent ("smart") products as well as the new ("smart") approach of engineering, explicitly taking into account consistent systems integration. Throughout the 97 papers contained in these proceedings, a range of topics are covered, amongst them the different facets and aspects of what makes a product or an engineering solution "smart". In addition, the conference papers investigate new ways of engineering for production planning and collaboration towards Smart Product Engineering. The publications provide a solid insight into the pressing issues of modern digital product creation facing increasing challenges in a rapidly changing industrial environment. They also give implicit advice how a "smart" product or engineering solution (processes, methods and tools) needs to be designed and implemented in order to become successful.

Métrologie dimensionnelle et tridimensionnelle de fabrication Souhir Gara,2025-02-04 La métrologie est la science des

mesures. La métrologie de fabrication s'intéresse au contrôle du brut lors de la réception de la matière première ou de la pièce brute qui provient du moulage, forgeage... Ce livre est destiné aux lycéens de la filiale techniques, aux étudiants niveau BTS, aux étudiants des instituts supérieurs aux études technologiques, aux étudiants des instituts préparatoires, aux élèves-ingénieurs, aux enseignants, aux responsables de production, aux maintenanciers, aux métrologues et aux spécialistes du domaine de l'usinage et des mesures qui peuvent l'utiliser pour maîtriser les activités d'un mesureur au sein d'une société de fabrication. Il débute par une présentation des instruments de contrôle et de mesure ainsi que leur pratique d'emploi et lecture et finalise à une description détaillée du mode d'élaboration de la gamme de contrôle et du contrat de phase de contrôle en métrologie dimensionnelle et de la gamme de mesure et du contrat de phase de mesure en métrologie tridimensionnelle. Il englobe une description, des exemples et des exercices corrigés en détail liés à la lecture du dessin de définition, à l'élaboration des montages de contrôle en fonction de la forme de la pièce et des contraintes imposées, au calcul des erreurs et des incertitudes, au choix d'un vérificateur approprié à une commande donnée, à l'élaboration des gammes et des contrats de phases dans le laboratoire de métrologie. Il traite aussi de la vérification des machines-outils, dès leurs réceptions et/ou après chaque production d'une commande de séries répétitives, garantissant une installation correcte, une conservation de leurs capacités et une continuité de production des pièces qui satisfont les consignes de la qualité totale.

Automatique et informatique industrielle Yves Monpeurt, Maksoud Oudjedi, 1994-01-01 T00:00:00+01:00 Cet ouvrage, mis à jour sous une nouvelle présentation, destiné aux classes de Première et Terminale STI, traite l'ensemble du programme rénové d'automatique et informatique industrielle. Il propose des documents à compléter, des exemples à imaginer, suivant une démarche active et motivante pour les élèves. Ce livre permet au professeur d'adapter son enseignement, en fonction du matériel et des parties opératives dont il dispose dans le laboratoire de son établissement. Une double préoccupation a dirigé la conception de cet ouvrage : • doter l'élève d'outils indispensables, pour appréhender au mieux les notions essentielles, • organiser et structurer l'ensemble de ces connaissances, afin d'acquérir le savoir-faire de l'automatique et informatique industrielle.
