in mathematics galois cohomology is  
the study of the group cohomology of  
galois modules that is the application of  
homological algebra to modules for  
galois groups a galois group  $G$   
associated to a field extension  $L/K$  acts  
in a natural way on some abelian  
groups for example those constructed  
directly from  $L$  but also through other  
galois representations that may be  
derived by more abstract means galois  
cohomology accounts for the way in  
which taking galois invariant elements  
fails
