Mammalogy George A. Feldhamer, Joseph F. Merritt, Carey Krajewski, Janet L. Rachlow, Kelley M. Stewart, 2020-03-24 A completely revised and updated edition of the leading mammalogy textbook, featuring color photographs throughout and a new streamlined structure for enhanced use in courses. There are more than 6,400 species in the class Mammalia, including the blue whale—the largest animal that has ever lived—and the pygmy shrew, which weighs little more than a dime. Such diversity among mammals has allowed them to play critical roles in every ecosystem, whether marine, freshwater, alpine,

tundra, forest, or desert. Reflecting the expertise and perspective of five leading mammalogists, the fifth edition of *Mammalogy: Adaptation, Diversity, Ecology* significantly updates taxonomy, adds a new introductory chapter on the science of mammalogy, and highlights several recently described species. To enhance its appeal to students, textual material has been reduced, consolidated, and streamlined without sacrificing breadth or depth of coverage. The fifth edition includes • for the first time, stunning color photographs throughout • chapters rearranged and grouped to best reflect phylogenetic relationships, with updated numbers of genera and species for each family • updated mammalian structural and functional adaptations, as well as ordinal fossil histories • recent advances in mammalian phylogeny, biogeography, social behavior, and ecology, with 12 new or revised cladograms reflecting current research findings • new breakout boxes on novel or unique aspects of mammals • new work on female post-copulatory mate choice, cooperative behaviors, group defense, and the role of the vomeronasal system • discussions of the current implications of climate change and other anthropogenic factors for mammals Maintaining the accessible, readable style for which Feldhamer and his coauthors are well known, this new edition of *Mammalogy* is the authoritative textbook on this amazingly diverse class of vertebrates.

Bat Ecology Thomas H. Kunz, M. Brock Fenton, 2005 In recent years researchers have discovered that bats play key roles in many ecosystems as insect predators, seed dispersers, and pollinators. Bats also display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics, including food webs, biogeography, and emerging diseases. In *Bat Ecology*, world-renowned bat scholars present an up-to-date, comprehensive, and authoritative review of this ongoing research. The first part of the book covers the life history and behavioral ecology of bats, from migration to sperm competition and natural selection. The next section focuses on functional ecology, including ecomorphology, feeding, and physiology. In the third section, contributors explore macroecological issues such as the evolution of ecological diversity, range size, and infectious diseases (including rabies) in bats. A final chapter discusses conservation challenges facing these fascinating flying mammals. *Bat Ecology* is the most comprehensive state-of-the-field collection for scientists and researchers. Contributors: John D. Altringham, Robert M. R. Barclay, Tenley M. Conway, Elizabeth R. Dumont, Peggy Eby, Abigail C. Entwistle, Theodore H. Fleming, Patricia W. Freeman, Lawrence D. Harder, Gareth Jones, Linda F. Lumsden, Gary F. McCracken, Sharon L. Messenger, Bruce D. Patterson, Paul A. Racey, Jens Rydell, Charles E. Rupprecht, Nancy B. Simmons, Jean S. Smith, John R. Bats John D. Altringham, 2011-08-25 Bats are highly charismatic and popular animals that are not only fascinating in their own right, but illustrate most of the topical and important concepts and issues in mammalian biology. This book covers the key aspects of bat biology, including evolution, flight, echolocation, hibernation, reproduction, feeding and roosting ecology, social behaviour, migration, population and community ecology, biogeography, and conservation. Written in collaboration with experts in captive management, ecology and veterinary science, chapters are presented for each

taxonomic group of Australian mammals. Australian Mammals provides practical guidance for zookeepers, veterinarians, zoologists, researchers and students.

Handbook of Mammals of Madagascar Nick Garbutt, 2023-01-05 The most up-to-date and comprehensive handbook to the region's mammals, illustrated with exceptional photography. Madagascar is home to one of the most remarkable assemblages of mammals on earth. Millions of years of isolation has resulted in the evolution of a suite of species that are exceptional for two major reasons. Firstly, every native non-volant species (approximately 210 species) is endemic. No other island or place on earth boasts such a combination of species richness and endemism. And secondly, these mammals have evolved an extraordinary diversity of body forms and lifestyles often displaying significant convergence with forms elsewhere but also at times evolving utterly unique features. Handbook of the Mammals of Madagascar describes all 217 native species, including bats, tenrecs, mice and lemurs, and a small number of introduced, non-native species. Species accounts are subdivided into sections covering description and identification, habitat and distribution (including distribution maps), behaviour and where to see. Over the past 15 years, major advances in research have been made into the island's mammal fauna and species accounts include all the latest information. Supporting chapters cover the island's regions and habitats, threats to mammals, conservation and important mammal watching sites. There is also a section covering the bizarre extinct mammal fauna. Throughout, the book is illustrated with exceptional, high-quality photography, often featuring species rarely photographed previously.
