

The 60L Green Building

Michael Harrison Smith

60L Green Building, 2000 Represents the collaborative efforts of both the Client Group and the Consortium to develop the planning and physical needs of the 60L Green Building Project at 60 Leicester Street, Carlton--Introduction.

Green Technology Dustin Mulvaney, 2011-05-03 Green Technology: An A-to-Z Guide explores the essential role of technology and its most recent developments toward a sustainable environment. Twofold in its definition, green technology includes the changing of existing technology toward energy conservation as well as the creation of new, clean technology aimed at utilizing renewable resources. With a primary focus on waste management, the volume presents more than 150 articles in A-to-Z format featuring such disciplines as nanoscience, biochemistry, information technology, and environmental engineering. Scholars and experts in their fields present a full range of topics from applications of green technology to The Green Grid global consortium to membrane technology and water purification systems to waste-to-energy technology. This work culminates in an outstanding reference available in both print and electronic formats for academic, university, and public libraries. Vivid photographs, searchable hyperlinks, an extensive resource guide, numerous cross references, and a clear, accessible writing style make the Green Society volumes ideal for classroom use as well as for research.

Factor Five Ernst Ulrich Weizsäcker, Charlie Hargroves, Michael H. Smith, Cheryl Desha, Peter Stasinopoulos, 2009 The 21st century will see monumental change. Either the human race will use its knowledge and skills and change the way it interacts with the environment, or the environment will change the way it interacts with its inhabitants. In the first case, the focus of this book, we would see our sophisticated understanding in areas such as physics, chemistry, engineering, biology, planning, commerce, business and governance accumulated over the last 1,000 years brought to bear on the challenge of dramatically reducing our pressure on the environment. The second case however is the opposite scenario, involving the decline of the planet's ecosystems until they reach thresholds where recovery is not possible, and following which we have no idea what happens. For instance, if we fail to respond to Sir Nicolas Stern's call to meet appropriate stabilisation trajectories for greenhouse gas emissions, and we allow the average temperature of our planet's surface to increase by 4-6 degrees Celsius, we will see staggering changes to our environment, including rapidly rising sea level, withering crops, diminishing water reserves, drought, cyclones, floods ... allowing this to happen will be the failure of our species, and those that survive will have a deadly legacy. In this update to the 1997 International Best Seller, *Factor Four*, Ernst von Weizsäcker again leads

a team to present a compelling case for sector wide advances that can deliver significant resource productivity improvements over the coming century. The purpose of this book is to inspire hope and to then inform meaningful action in the coming decades to respond to the greatest challenge our species has ever faced 6 that of living in harmony with our planet and its other inhabitants.--Publisher's description.

The Green City Nicholas Low,Brendon Gleeson,Ray Green,Darko Radovic,2016-05-09 A team of city-building professionals explain in straightforward terms how the idea of ecological sustainability can be embodied in the everyday life of homes, communities and cities to make a better future.The book considers - and answers - three questions: What does the global agenda of sustainable development mean for the urban spaces where most

The Natural Advantage of Nations Michael Harrison Smith,2013-06-17 This book is more than just a 'palliative care' guide for the planet - it is about innovation, solutions, competitiveness and profitability. At work, at home and as members of society, our generation has an opportunity - to be part of the obligation - and an exciting solution in restoring the balance. The authors present a bold vision for the future and demonstrate how we can get there, drawing on lessons of competitive advantage theory and the latest in sustainability, economics, innovation, business and governance theory and practice. The result is nothing less than the most authoritative and comprehensive guide to date, to building the new ecologically sustainable economy. Green Urbanism Down Under Timothy Beatley,Peter Newman,2012-09-26 In this immensely practical book, Timothy Beatley sets out to answer a simple question: what can Americans learn from Australians about “greening” city life? Green Urbanism Down Under reports on the current state of “sustainability practice” in Australia and the many lessons that U.S. residents can learn from the best Australian programs and initiatives. Australia is similar to the United States in many ways, especially in its “energy footprint.” For example, Australia’s per capita greenhouse gas emissions are second only to those of the United States. A similar percentage of its residents live in cities (85 percent in Australia vs. 80 percent in the United States). And it suffers from parallel problems of air and water pollution, a national dependence on automobiles, and high fossil fuel consumption. Still, after traveling throughout Australia, Beatley finds that there are myriad creative responses to these problems—and that they offer instructive examples for the United States. Green Urbanism Down Under is a very readable collection of solutions. Although many of these innovative solutions are little-known outside Australia, they all present practical possibilities for U.S. cities. Beatley describes “green transport” projects, “city farms,” renewable energy plans, green living programs, and much more. He considers a host of public policy initiatives and scrutinizes regional and state planning efforts for answers. In closing, he shares his impressions about how Australian results might be applied to U.S.

problems. This is a unique book: hopeful, constructive, and filled with ideas that have been proven to work. It is a “must read” for anyone who cares about the future of American cities.

The Australian Green Consumer Guide Tanya Ha,2008 Gives consumers confidence that they can find certifiably organic and more ecologically sound products in the market place without being duped by false advertising.

Sustainable Buildings in Practice George Baird,2010-01-29 Current assessment methods of sustainable buildings do not adequately account for the users’ needs. Given that over the life of a building, total salary costs far outweigh both operating costs and combined capital and rental costs, the occupants’ needs are not something which should be sensibly ignored. This book presents an unbiased evaluation of thirty of the most cutting-edge, sustainable buildings in the world, in terms of the users’ perceived comfort, health and productivity. The author has visited the buildings, interviewed the design teams and examined the findings of a sixty-question standardized user questionnaire. The book provides: thirty case studies covering mixed-mode, passive and environmentally sustainable commercial and institutional buildings detailed insights into the principles underlying the design of sustainable buildings worldwide, over several climatic zones and eleven countries, together with clear explanations and illustrations of innovative design practice a discussion of common issues and the lessons that may be learnt from a study of the performance of sustainable buildings in practice, from the point of view of the people who use them. This important book will be of great benefit to architects and engineers, facility managers of commercial and institutional buildings, as well as developers and researchers, academics and students in these fields.

Sustainable Retrofitting of Commercial Buildings Richard Hyde,Nathan Groenhout,Francis Barram,Ken Yeang,2015-01-28 Despite recent improvements in energy efficiency being made in new build, it is important that the existing commercial building sector also take action to meet emission reduction targets. The objectives and challenges of such action will reduce the risk of the sector becoming obsolete due to high energy use and poor environmental performance. This book presents a theory-based, practice-support methodology to deal with sustainable retrofitting opportunities for existing commercial buildings in warm climates using bioclimatic design as the basis. The book has four main parts, focusing on eco-design and renovation, bioclimatic retrofitting, technological and behavioural change and case studies of retrofitting exemplars. In the first part, the context of climate change effects on design and renovation at the city scale is discussed. The second part looks at bioclimatic retrofitting as a 'design guide' for existing buildings, highlighting the significance of architectural design and engineering systems for energy performance. The technological and behavioural contexts of the existing building sector - policies, modelling, monitoring and trend analysis in respect to energy and environmental performance - are covered in part three. The final part gives some case studies showing the effectiveness of strategies suggested for effective environmental performance. This book is a must-have guide for all involved in the design and engineering of retrofitting projects in warm climates.

Ecology of Cities and Towns Mark J. McDonnell, Amy K. Hahs, Jürgen H. Breuste, 2009-06-25 The unprecedented growth of cities and towns around the world, coupled with the unknown effects of global change, has created an urgent need to increase ecological understanding of human settlements, in order to develop inhabitable, sustainable cities and towns in the future. Although there is a wealth of knowledge regarding the understanding of human organisation and behaviour, there is comparably little information available regarding the ecology of cities and towns. This book brings together leading scientists, landscape designers and planners from developed and developing countries around the world, to explore how urban ecological research has been undertaken to date, what has been learnt, where there are gaps in knowledge, and what the future challenges and opportunities are.

The Environmental Brief Richard Hyde, Steve Watson, Wendy Cheshire, Mark Thomson, 2007-01-24 The built environment is responsible for an estimated forty-five per cent of all greenhouse gas emissions. As the greatest opportunities for reducing these emissions occur during the briefing and design processes, the pathway to better design lies in preparing environmental briefs, and using these to drive building design and produce buildings of high environmental performance. This process-driven book looks at the theoretical issues involved in an environmental brief, and outlines methods by which architects can approach the writing of a brief that considers all aspects of the natural and the built environment, and relates these concepts to a number of case studies from around the world.

What Colour is your Building? David Clark, 2019-07-25 Defining and reducing the carbon footprint of a new or refurbished building can be a daunting task. There are lots of tools to measure the environmental impact of buildings, but they all measure energy and CO₂ in different ways, and they do not measure the whole carbon footprint. What Colour is your Building? provides practical and pragmatic guidance on how to calculate and then compare the whole carbon footprint of buildings using one simple method looking at operating, embodied and transport energy. It will equip designers, building owners, occupiers, planners and policy makers with the tools and knowledge that they will need to make decisions early on about where the big impacts will be in terms of reducing the carbon footprint of the building, including: A new, simple approach to understanding the whole carbon impact of buildings Benchmarking data for operating energy performance A clear, transparent method of separating landlord energy performance from tenant energy performance Simple diagrams and numbers to put renewable energy into perspective.

Whole System Design Peter Stansinopoulos, Michael Smith, Karlson Hargroves, Cheryl Desha, 2013-01-11 Whole System Design is increasingly being seen as one of the most cost-effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system. A focus on design is critical, as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life, which can

span from a few years to many decades. Indeed, it is now widely acknowledged that all designers - particularly engineers, architects and industrial designers - need to be able to understand and implement a whole system design approach. This book provides a clear design methodology, based on leading efforts in the field, and is supported by worked examples that demonstrate how advances in energy, materials and water productivity can be achieved through applying an integrated approach to sustainable engineering. Chapters 1-5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework. Chapters 6-10 demonstrate, through detailed worked examples, the application of the approach to industrial pumping systems, passenger vehicles, electronics and computer systems, temperature control of buildings, and domestic water systems. Published with The Natural Edge Project, the World Federation of Engineering Organizations, UNESCO and the Australian Government.

Vortex Cities to Sustainable Cities Phil McManus, 2005 This book examines how Australian cities are becoming unsustainable and suggests possibilities for future actions that move us towards sustainability. Chapters on population and demography, air quality, water quality, water availability, transport and biodiversity include many new ideas to make our cities more sustainable.

Positive Development Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of 'Positive Development' in which the built environment provides greater life quality, health, amenity and safety for all without sacrificing resources or money. With a different form of design, development itself can become a 'sustainability solution'. A cornerstone of this new paradigm is the eco-retrofitting of the vast urban fabric we already inhabit. The author presents a revolutionary new tool called SmartMode to achieve this end. This book challenges everyone working in or studying the areas of sustainable development, planning, architecture or the built environment to rethink their current ideas and practices.

Facteur 5 Cheryl Desha, Karlson Hargoves, Michael Smith, Peter Stasinopoulos, Ernst von Weizsäcker, 2013-11-22

Changement climatique, croissance économique en berne, voire inexistante, ressources planétaires toujours plus chères et difficiles d'accès, droit pour tous les hommes à un niveau de vie correct : tels sont les défis de ce siècle. Pour les relever, le monde doit produire biens et services en consommant beaucoup moins de ressources. Rendre les ressources 5 fois plus productives, c'est possible, rapidement, et c'est rentable ! Les technologies existent déjà, il suffit de les utiliser : c'est ce que démontrent les auteurs de Facteur 5 dans la première partie de ce livre, en illustrant leur propos par des dizaines d'exemples concrets d'amélioration de la productivité des ressources, pris dans des secteurs économiques très variés : bâtiments, industrie, agriculture, agro-alimentaire et restauration, transports, technologies de l'information. La seconde partie de l'ouvrage prolonge la réflexion et étudie les aspects politiques, économiques et éthiques de cet objectif visionnaire. Ses propositions novatrices montrent comment inciter entreprises et consommateurs à adopter des technologies beaucoup plus économes en eau, en énergie, en matériaux, et quel rôle États et institutions publiques peuvent jouer pour répondre au mieux à ces défis majeurs. L'ouvrage s'adresse à un public très varié de décideurs (responsables politiques, managers d'entreprises, experts internationaux, etc.) impliqués de près ou de loin dans des questions de stratégie de développement durable, aux ingénieurs, chercheurs, enseignants et étudiants.
