*Academic E-Books* Suzanne M. Ward, Robert S. Freeman, Judith M. Nixon, 2015-11-15 Academic E-Books: Publishers, Librarians, and Users provides readers with a view of the changing and emerging roles of electronic books in higher education. The three main sections contain contributions by experts in the publisher/vendor arena, as well as by librarians who report on both the challenges of offering and managing e-books and on the issues surrounding patron use of e-books. The case study section offers perspectives from seven different sizes and types of libraries whose librarians describe innovative and thought-provoking projects involving e-books. Read about perspectives on e-books from organizations as diverse as a commercial publisher and an association press. Learn about the viewpoint of a jobber. Find out about the e-book challenges facing librarians, such as the quest to control costs in the patron-driven acquisitions (PDA) model, how to solve the dilemma of resource sharing with e-books, and how to manage PDA in the consortial environment. See what patron use of e-books reveals about reading habits and disciplinary differences. Finally, in the case study section, discover how to promote scholarly e-books, how to manage an e-reader checkout program, and how one library replaced most of its print collection with e-books. These and other examples illustrate how innovative librarians use e-books to enhance users' experiences with scholarly works.

**Radiobiology Textbook** Sarah Baatout, 2023-09-23 This open access textbook focuses on the various aspects of radiobiology. The goal of radiobiological research is to better understand the effects of radiation exposure at the cellular and molecular levels in order to determine the impact on health. This book offers a unique perspective, by covering not only radiation biology but also radiation physics, radiation oncology, radiotherapy, radiochemistry, radiopharmacy, nuclear medicine, space radiation biology & physics, environmental and human radiation protection, nuclear emergency planning, molecular biology and bioinformatics, as well as the ethical, legal and social considerations related to radiobiology. This range of disciplines contributes to making radiobiology a broad and rather complex topic. This textbook is intended to provide a solid foundation to those interested in the basics and practice of radiobiological science. It is a learning resource, meeting the needs of students, scientists and medical staff with an interest in this rapidly evolving discipline, as well as a teaching tool, with accompanying teaching material to help educators.

**Engineering the Environment** David P. D. Munns, 2017-07-19 Promising an end to global hunger and political instability, huge climate-controlled laboratories known as phytotrons spread around the world to thirty countries after the Second World War. The United States built nearly a dozen, including the first at Caltech in 1949. Made possible by computers and other novel greenhouse technologies of the early Cold War, phytotrons enabled plant scientists to experiment on the environmental causes of growth and development of living organisms. Subsequently, they turned biologists into technologists who, in their pursuit of knowledge about plants, also set out to master the machines that controlled their environment. *Engineering the Environment* tells the forgotten story of a research program that revealed the shape of the environment, the limits of growth and development, and the limits of human control over complex technological systems. As support and funding for basic science dwindled in the mid-1960s, phytotrons declined and ultimately disappeared—until, nearly thirty years later, the British built the Ecotron to study the impact of climate change on biological communities. By revisiting this history of phytotrons, David Munns reminds us of the vital role they can play in helping researchers unravel the complexities of natural ecosystems in the Anthropocene.

**High-School Biology Today and Tomorrow** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on High-School Biology Education, 1989-02-01 Biology is where many of science's most exciting and relevant advances are taking place. Yet, many students leave school without having learned basic biology principles, and few are excited enough to continue in the sciences. Why is biology education failing? How can reform be accomplished? This book presents information and expert views from curriculum developers, teachers, and others, offering suggestions about major issues in biology education: what should we teach in biology and how should it be taught? How can we measure results? How should teachers be educated and certified? What obstacles are blocking reform?

**Textbooks in Academic Libraries** Chris Diaz, 2018-12-03 Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify high impact courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A

textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.

The work that Dr. Squires has done in moving the curriculum development process onto the Web has removed some of the tedium involved in crafting curriculum, making it 'user friendly' and open to the kinds of ongoing changes that make the promise of continual renewal of curriculum a reality. *The 2011 Guide to Free Or Nearly-Free E-Books*, 2011 One of the problems which face all librarians adding e-books to their collections is that of bibliographic control: there is no legal deposit for e-books and consequently there is no single place from which new titles can be found. If this is true of commercially published e-books, it is most certainly also true of free e-books... and there are many thousands of free e-books available over the Internet, many of which are of a quality such

that librarians might wish to have them in their collections. The 2011 Guide to Free or Nearly-Free e-Books is offered as a tool for librarians and others involved in book selection (e.g. teachers in schools) in all sectors - school, further and higher education, public and special libraries - to facilitate easy access to free e-books and e-book collections which can enhance their digital library.

**Keeping College Within Reach** United States. Congress. House. Committee on Education and the Workforce. Subcommittee on Higher Education and Workforce Training, 2014

Evolution Vs. Creationism Eugenie Carol Scott, 2005 Almost eighty years after the Scopes trial, the debate over the teaching of evolution continues to rage. There is no easy resolution--it is a complex topic with profound scientific, religious, educational, and legal implications. How can a student or parent understand this issue, which is such a vital part of education? *Evolution vs. Creationism* provides a badly needed, comprehensive, and balanced survey. Written by one of the leading advocates for the teaching of evolution in the United States, this accessible resource provides an introduction to the many facets of the current debate--the scientific evidence for evolution, the legal and educational basis for its teaching, and the various religious points of view--as well as a concise history of the evolution-creationism controversy. Each of the four sections of *Evolution vs. Creationism* provides a resource that will assist the reader in better understanding these issues. The first section addresses the nature of how evolution works as part of the scientific enterprise, as well as a summary of the relationship between religious beliefs and science. A section on the history of the controversy provides a handy synopsis of the lengthy struggles, from before Darwin to the present day, between advocates of creationism and the proponents of evolution. A collection of primary source documents addressing cosmology, law, education, and religious issues from all sides of the debate constitute the third section. The book concludes with a selection of resources for further information for those who wish to study the topic in more depth.

*Health Sciences Collection Management for the Twenty-First Century* Susan K. Kendall, 2018-01-15 Selected as a 2025 Doody's Core Title *Health Sciences Collection Management for the Twenty-First Century* is intended for those with any level of experience in health sciences collection management. This book from the authoritative Medical Library Association starts with the context of health sciences publishing and covers the foundations of selection, budgeting, and management. It won't tell new librarians what to buy but will give them background and criteria that should go into their selections. However, the focus of this book is not only on best practices but also on the big picture and the deeper changes in the field that affect

decision making. Subjects not always covered in many collection development textbooks such marketing or accessibility are included because they are part of the larger collections landscape. Chapter contributors bring their own perspectives to the topics. Stories of different libraries' experiences bring interesting topics to the forefront in practical, specific, and timely detail. While whole books have been written that go into some of these topics more in depth on their own, the treatment of each topic here focuses on the unique perspective and concerns of the collection manager.

*Replacing Darwin* Nathaniel T Jeanson, 2017-09-01 If Darwin were to examine the evidence today using modern science, would his conclusions be the same? Charles Darwin's *On the Origin of Species*, published over 150 years ago, is considered one of history's most influential books and continues to serve as the foundation of thought for evolutionary biology. Since Darwin's time, however, new fields of science have emerged that simply give us better answers to the question of origins. With a Ph.D. in cell and developmental biology from Harvard University, Dr. Nathaniel Jeanson is uniquely qualified to investigate what genetics reveal about origins. *The Origins Puzzle Comes Together* If the science surrounding origins were a puzzle, Darwin would have had fewer than 15% of the pieces to work with when he developed his theory of evolution. We now have a much greater percentage of the pieces because of modern scientific research. As Dr. Jeanson puts the new pieces together, a whole new picture emerges, giving us a testable, predictive model to explain the origin of species. *A New Scientific Revolution Begins* Darwin's theory of evolution may be one of science's "sacred cows," but genetics research is proving it wrong. Changing an entrenched narrative, even if it's wrong, is no easy task. *Replacing Darwin* asks you to consider the possibility that, based on genetics research, our origins are more easily understood in the context of . . . In the beginning . . . God, with the timeline found in the biblical narrative of Genesis. There is a better answer to the origins debate than what we have been led to believe. Let the revolution begin! About the Author Dr. Nathaniel Jeanson is a scientist and a scholar, trained in one of the most prestigious universities in the world. He earned his B.S. in Molecular Biology and Bioinformatics from the University of Wisconsin-Parkside and his PhD in Cell and Developmental Biology from Harvard University. As an undergraduate, he researched the molecular control of photosynthesis, and his graduate work involved investigating the molecular and physiological control of adult blood stem cells. His findings have been presented at regional and national conferences and have been published in peer-reviewed journals, such as *Blood*, *Nature*, and *Cell*. Since 2009, he has been actively researching the origin of species, both at the Institute for Creation Research and at *Answers in Genesis*.
