Collaborative Medicine Case Studies Rodger Kessler, Dale Stafford, 2008-03-11 This timely and important work looks at the collaborative health care model for the delivery of mental health care in a primary care setting. This has become the ideal model for the treatment of comorbid medical and psychiatric or psychological disorders. There is also an increased awareness that pharmacological intervention, the most frequently delivered intervention for psychological disorders, is often of limited effectiveness without concurrent specific psychological intervention. The book includes more than two dozen case studies, co-written by clinical psychologists and primary care physicians. It is essential reading for any psychology practitioner in a clinical setting, as well as for health care administrators.

Case Studies for Complementary Therapists Kelly Galvin, Madelaine Bishop, 2010-12-20 This book provides support at curriculum level for developing the complementary potential which exists between complementary and conventional western medicine. It provides students, teachers and practitioners with a framework within which they can effectively analyse and classify the extensive amount of information gathered in a CAM consultation and help them develop effective and appropriate treatment programmes within the time constraints of a busy clinic. It provides an insight into the initial CAM consultation process, offering possible treatment and collaborative referral options for individual cases rather than dictating diagnostic analysis or treatment protocols for specific conditions. Question suggestions have been provided to help the user collect the necessary information to develop a working diagnosis and treatment protocol for each individual case. Readers can then adapt questions, decision-making tools and therapeutic recommendations to suit the needs of their own clients. Complementary practitioners are often uncertain about the legal and ethical boundaries regarding diagnosis and case management. This book will help CAM students and practitioners recognise situations requiring referral understand their role in collaborative case management and confidently integrate a range of CAM modalities in treatment programmes - Provides a clear case analysis format which can be and adapted to suit the requirements of individual case histories - Specific questioning format - Clearly identifies situations where cross or collaborative referral is necessary - Decision tables help readers prioritise treatment, refer appropriately and help guide clinical thinking when readers are faced with several treatment options. - Class tested, curriculum based

Health Services Management: A Case Study Approach, Eleventh Edition Ann Scheck McAlearney, Anthony R. Kovner, 2017-09-01 Instructor Resources: Instructor's Manual Today's healthcare managers face increasingly complex challenges and often must make decisions quickly. When a difficult situation arises, managers can no longer simply look it up online or in the management literature. Properly looking it up involves knowing where and how to look, appropriately framing a research question, weighing valid evidence, and understanding what is required to make proposed solutions work. Health Services Management: A Case Study Approach offers a diverse collection of case studies to help readers learn and apply key concepts of management, with an emphasis on the use of evidence in management practice. The case study authors, many of whom are practitioners or academics who work closely with practitioners, present realistic management challenges across a variety of settings. They examine potential responses to those challenges by health services managers and other stakeholders, and they provide a platform for meaningful discussion of opportunities and constraints for management decision makers attempting to implement change. This edition includes 60 case studies—32 of which are brand new—arranged thematically into six sections: The Role of the Manager, Control, Organizational Design, Professional Integration, Adaptation, and Accountability. The new cases include the following: • Better Metrics for Financial Management

• What Makes a Patient-Centered Medical Home? • Doing the Right Thing When the Financials Do Not Support Palliative Care • Hearing the Patient Voice: Working with Patient and Family Advisers to Improve the Patient Experience • Managed Care Cautionary Tale: A Case Study in Risk Adjustment and Patient Dumping Learning by example is one of the oldest forms of learning, and the case study approach offers a time-tested way for students and healthcare professionals to develop practical skills that are not easily acquired through lectures. Health Services Management has been used in classrooms since 1978, and this eleventh edition offers a fresh take on a classic text.

These skills will allow them to alter the health trajectory of some of the neediest patients in the health care system. This volume covers a broad range of toxicological topics, and specialty guidance is offered at the end of every case to aid non-toxicologists. The dilemmas are applicable to both academic and clinical medicine. A list of relevant questions is also provided for each case. Subjects include common toxicological problems, rare presentations of common problems, common problems with controversial treatments or difficult diagnoses, and rare problems. Case Studies in Medical Toxicology from the American College of Medical Toxicology is a detailed reference text on specific toxicological issues and also serves as a practical review for those taking board exams. Building Capacity for Health Informatics in the Future F. Lau,J.A. Bartle-Clar,G. Bliss,2017-03 Health information technologies are revolutionizing and streamlining healthcare, and uptake continues to rise dramatically. If these technologies are to be effectively implemented, capacity must be built at a regional, national and global level, and the support and involvement of both government and industry will be vital. This book presents the proceedings of the 2017 Information Technology and Communications in Health conference (ITCH 2017), held in Victoria, BC, Canada, in February 2017. The conference considers, from a variety of perspectives, what is required to move the technology forward to real, sustained and widespread use, and the solutions examined range from improvements in usability and training to the need for new and improved design of information systems, user interfaces and interoperable solutions. Government policies, mandates, initiatives and the need for regulation are also explored, as is the requirement for improved interaction between industrial, governmental and academic partners. With its focus on building the next generation of health informatics and the capacity required to deliver better healthcare worldwide, this book will be of interest to all those involved in the provision of healthcare.
