**Global Economic Prospects, June 2023** World Bank, 2023-06-27 Global growth is projected to slow significantly in the second half of this year, with weakness continuing in 2024. Inflation pressures persist, and tight monetary policy is expected to weigh substantially on activity. The possibility of more widespread bank turmoil and tighter monetary policy could result in even weaker global growth. Rising borrowing costs in advanced economies could lead to financial dislocations in the more vulnerable emerging market and developing economies (EMDEs). In low-income countries, in particular, fiscal positions are increasingly precarious. Comprehensive policy action is needed at the global and national levels to foster macroeconomic and financial stability. Among many EMDEs, and especially in low-income countries, bolstering fiscal sustainability will require generating higher revenues, making spending more efficient, and improving debt management practices. Continued international cooperation is also necessary to tackle climate change, support populations affected by crises and hunger, and provide debt relief where needed. In the longer term, reversing a projected decline in EMDE potential growth will require reforms to bolster physical and human capital and labor-supply growth.

Bangladesh International Monetary Fund. Asia and Pacific Dept, 2024-06-24 The Bangladesh economy continues to face multiple challenges. Persistently high international commodity and food prices and global uncertainties have amplified macroeconomic vulnerabilities. A sudden reversal of the financial account intensified pressures on foreign exchange reserves and the exchange rate, calling for a reinvigoration of the reform momentum.

**South Asia Economic Focus** World Bank, 2024-04-02 South Asia is expected to continue to be the fastest-growing emerging market and developing economy (EMDE) region over the next two years. This is largely thanks to robust growth in India, but growth is also expected to pick up in most other South Asian economies. However, growth in the near-term is more reliant on the public sector than elsewhere, whereas private investment, in particular, continues to be weak. Efforts to rein in

elevated debt, borrowing costs, and fiscal deficits may eventually weigh on growth and limit governments' ability to respond to increasingly frequent climate shocks. Yet, the provision of public goods is among the most effective strategies for climate adaptation. This is especially the case for households and farms, which tend to rely on shifting their efforts to non-agricultural jobs. These strategies are less effective forms of climate adaptation, in part because opportunities to move out of agriculture are limited by the region's below-average employment ratios in the non-agricultural sector and for women. Because employment growth is falling short of working-age population growth, the region fails to fully capitalize on its demographic dividend. Vibrant, competitive firms are key to unlocking the demographic dividend, robust private investment, and workers' ability to move out of agriculture. A range of policies could spur firm growth, including improved business climates and institutions, the removal of financial sector restrictions, and greater openness to trade and capital flows.

*Impacts of the Russia-Ukraine War price shocks on the Bangladesh economy: A general equilibrium analysis* Chowdhury, Tahreen Tahrima,Dorosh, Paul A.,Islam, Rizwana,Pradesha, Angga,2023-05-04 The spike in global commodity prices caused by the Russia-Ukraine war has had major adverse impacts on many developing countries, including Bangladesh, that still depend heavily on energy and food imports. Although the Bangladesh economy has rebounded after the COVID-19 pandemic, the latest global trade shock has threatened to increase food insecurity and poverty. This study utilizes the Bangladesh RIAPA economywide model to assess the impact of increases in global commodity prices and explores potential policy interventions to reduce negative impacts. Simulation results show that increases in international commodity prices create a GDP loss of 0.36 percent and an increase of three million in the number of poor (mainly rural poor). Energy price shocks account for most of this decline in real GDP (0.28 percent). The fertilizer subsidy helps spur agriculture production which leads to an increase in crop GDP by 0.78 percent and total agricultural GDP by 0.43 percent. Changes in policy could help mitigate the effects of these price shocks. In particular, petroleum subsidies would help increase production in both agriculture and services, leading to a 0.3 percent increase in household consumption, considerably more than the gain under a targeted cash transfer policy of equal cost. However, given that the petroleum subsidy does not specifically target the poor, it only reduces poverty by a fraction of what a targeted cash transfer would. Moreover, as illustrated by the experiences of other countries, increases in a fuel subsidy, once introduced, are likely to be very difficult to reverse. This suggests that if the major policy goal is to reduce poverty, a direct cash transfer would be more effective than the other policy options considered here. Combining these policies, however, would be even more effective than any single intervention, reducing poverty incidence by around 2.5 million people, and thereby preventing nearly all of the potential increase in poverty resulting from global price shocks.

*Global Economic Prospects, January 2023* World Bank Group, 2023-02-23 Global growth is projected to decelerate sharply, reflecting synchronous policy tightening aimed at containing very high inflation, worsening financial conditions, and continued disruptions from Russia's invasion of Ukraine. Investment growth in emerging market and developing economies (EMDEs) is expected to remain below its average rate of the past two decades. Further adverse shocks could push the global economy into recession. Small states are especially vulnerable to such shocks because of the reliance on external trade and financing, limited economic diversification, elevated debt, and susceptibility to natural disasters. Against this backdrop, it is critical that EMDE policy makers ensure that any fiscal support is focused on vulnerable groups, that inflation expectations remain well anchored, and that financial systems continue to be resilient. Urgent global and national efforts are also needed to mitigate the risks of global recession and debt distress in EMDEs, and to support a major increase in EMDE investment. *Global Economic Prospects* is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). Each edition includes analytical pieces on topical policy challenges faced by these economies.

Asian Development Outlook 2022 Asian Development Bank, 2022-04-01 Developing Asia faces greater uncertainty from the Russian invasion of Ukraine even as the region continues to contend with COVID-19 outbreaks. The war has sent shockwaves across financial and commodity markets. The highly transmissible Omicron variant has fueled a sharp rise in cases in the region, though its less severe health impact, coupled with increased immunity, has allowed economies to remain relatively open. As such, growth in the region is forecast to remain strong, supported by recovering domestic demand. The Russian invasion of Ukraine, aggressive monetary policy tightening in the US, and renewed COVID-19 outbreaks pose near-term risks to the outlook, alongside medium-term risks such as rising inequality due to school closures. Fiscal resources are needed to aid recovery and support sustainable development. But deficits and debt expanded substantially during the pandemic. Mobilizing taxes and optimizing tax incentives needs to be combined with improved spending efficiency to help developing Asia achieve its development objectives.

*Towards a Sustainable Economy* Moazzem Hossain, Qazi Kholiquzzaman Ahmad, Mazharul M Islam, 2022-12-30 The Sustainable Development Goals (SDGs) were introduced by the United Nations (UN) for all member nations with a total of 17 goals and 169 targets to be achieved between 2016 and 2030. The recent pandemic has presented more challenges to achieving the UN's SDGs. This book examines Bangladesh's ascendancy in socio-economic terms and the prospects of Bangladesh overcoming the challenges to become a higher-middle-income nation by 2030. This book traces the

transformation of Bangladesh from 1996 through 2020 and examines various factors contributing to its success from rural economy, external support, manufacturing, and structural transformation to energy consumption. This book also looks at the challenges and opportunities for Bangladesh as the Fourth Industrial Revolution unfolds and as climate change, to which Bangladesh is highly vulnerable, escalates. This book will be a useful reference document for those who are interested in gaining more insights into inclusive growth and sustainable development from the case study of Bangladesh.

**Asian Development Outlook April 2023** Asian Development Bank,2023-04-01 This publication highlights brighter economic prospects for Asia and the Pacific amid ongoing challenges. It forecasts growth across the region's developing economies of 4.8% this year and in 2024, up from 4.2% in 2022. The reopening of the People's Republic of China (PRC) will boost regional economic growth through supply chain linkages and demand for goods and services. Growth in the PRC is expected to rebound to 5.0% this year from 3.0% in 2022. Healthy domestic demand in India will also support regional growth: India is forecast to grow by 6.4% in 2023. Growth in the Caucasus and Central Asia, the Pacific, and Southeast Asia will be lifted as tourism recovers. Meanwhile, headline inflation is expected to decelerate from 4.4% in 2022 to 4.2% this year and 3.3% in 2024. However, higher debt and interest rates have magnified financial stability risks, as evidenced by recent banking sector problems in the United States and Europe. An escalation in the Russian invasion of Ukraine could cause renewed surges in commodity prices, stoking global inflation and inducing further monetary tightening. Further, climate change and global fracturing remain persistent challenges. To confront these challenges, policy makers need to strengthen

policies to ensure financial stability and actively support multilateralism to deepen regional cooperation.
