Emergency Nursing Care Gary Jones,Ruth Endacott,Robert Crouch,2002-11 This comprehensive textbook is aimed at both the qualified or trainee nurse in accident and emergency care.

High Risk and Critical Care Intrapartum Nursing Lisa K. Mandeville,Nan H. Troiano,1999 Co-published with the Association of Women's Health, Obstetrics & Neonatal Nurses (AWHONN), this comprehensive clinical text/reference provides a current, concise and accurate source of guidance for perinatal nurses and clinical specialists. Readers will find clear explanations and specific guidelines for all aspects of high-risk labor and delivery, with information that's easy to locate and use, including the most current material on obstetric critical care. Coverage includes AWHONN's protocols and procedures; and sample protocols and flowsheets enhance quick referencing. New chapters in this edition on: Invasive Hemodynamic Monitoring, Mechanical Ventilation, Sepsis, Acute Renal Failure, Thyroid Disorders, and more! A Brandon-Hill Recommended Title.

Principles and Practice of Trauma Nursing Rose Ann O'Shea,2005-01-01 This unique, authoritative book explores the spectrum of trauma care provided in the UK, discussing procedures for specific trauma presentations as well as the nurse's role in providing care in the emergency setting. Chapters on the relevant biosciences are included, which serve as an excellent source of review or instruction for nurses of all levels. In addition to the basic science dimensions of trauma nursing, the book also addresses clinical, psychosocial, and psychological aspects of care. Its structured approach to patient management presents information in an easy-to-follow format. Research evidence is used throughout to support the text, laying the foundation for expert nursing practice. Multidisciplinary approach makes the book relevant to current practice. Key learning points are highlighted with the text to help direct the reader's attention and encourage learning. A wide range of expert contributors makes the book a credible and authoritative source. Easy-to-understand chapters on fundamental biosciences expand readers' knowledge. Extensive illustrations, line drawings, and easy-to-read tables provide clear, visual explanations of important material. Appropriate references and recommended sources for further reading help readers develop knowledge and insight. Structured textbook format facilitates learning, enables information to be found quickly, and makes the book more user-friendly. The section on pre-hospital care presents a key piece of the trauma care spectrum, rather than focusing solely on the nurse's role in in-hospital care.

Accident & Emergency Brian Dolan, Lynda Holt, 2008 This edition shows nurses why they are doing what they do, rather than just how, for a range of A&E conditions. It has sections that cover potential problem areas, such as paediatrics and treating the mentally ill A&E patient. A basic A&P section is included so even the most experienced nurse can refresh their knowledge.

Manuals Combined: NURSING CARE OF THE SURGICAL PATIENT, SPECIAL SURGICAL PROCEDURES I & II, SURGICAL METHODS, STERILE PROCEDURES AND WOUND CARE ,2019-03-14 Well over 700 total pages ... Surgery encompasses all elements in the scientific care of surgical patients. The operation is the focal point for these patients. It is imperative that the patient comes to the operating room (OR) optimally prepared physically and emotionally before performance of an operative procedure. The persons concerned with and/or contributing to surgical patient care are many. The practical nurse shares a special experience with the patient at this time of great stress and need in his life. Their relationship encompasses feelings, attitudes, and behavior approaches. The nurse's first objective is to promote and establish a meaningful, therapeutic relationship, enabling the provision of individualized care. He, then, is to provide the perioperative nursing care that is required for the safest possible care of the patient and production of a favorable surgical outcome. Any patient who is scheduled to have surgery poses special challenges to personnel entrusted with his care. Every procedure done by (OR) operating room personnel for the patient's operation--from the preoperative skin prep to final closure of the incision--requires thorough mastery of many precision techniques and uncompromising attention to detail in order to safeguard the patient. While in the OR, the patient is cared for by a highly trained team that must function as a unit if the patient's best interest is to be served. You, the OR specialist, are a member of this team. While each patient brings new challenges to the surgical team, there are certain problems and techniques associated with particular kinds of special surgery that can be anticipated. By preparing for these peculiarities of the various specialties, the team can circumvent a great many problems that would otherwise arise. In this subcourse, a large number of operations in various specialties are described, along with special dangers that may attend these particular procedures. The more familiar you become with these, the more effectively you will be able to do your part as a member of the operating room team. Also, in this course, you will study wound healing and wound care, contaminated wounds, and burns. Information you read in this course will aid you in maintaining and improving the health of soldiers.
