Under a White Sky Elizabeth Kolbert, 2022-04-05 NATIONAL BESTSELLER • The Pulitzer Prize-winning author of *The Sixth Extinction* returns to humanity's transformative impact on the environment, now asking: After doing so much damage, can we change nature, this time to save it? RECOMMENDED BY PRESIDENT OBAMA AND BILL GATES • SHORTLISTED FOR THE WAINWRIGHT PRIZE FOR WRITING • ONE OF THE TEN BEST BOOKS OF THE YEAR: *The Washington Post* • ONE OF THE BEST BOOKS OF THE YEAR: *Time*, *Esquire*, *Publishers Weekly*, *Kirkus Reviews* • "Beautifully and insistently, Kolbert shows us that it is time to think radically about the ways we manage the environment."—Helen Macdonald, *The New York Times* With a new afterword by the author That man should have dominion "over all the earth, and over every creeping thing that creepeth upon the earth" is a prophecy that has hardened into fact. So pervasive are human impacts on the planet that it's said we live in a new geological epoch: the Anthropocene. In *Under a White Sky*, Elizabeth Kolbert takes a hard look at the new world we are creating. Along the way, she meets biologists who are trying to preserve the world's rarest fish, which lives in a single tiny pool in the middle of the Mojave; engineers who are turning carbon emissions to stone in Iceland; Australian researchers who are trying to develop a "super coral" that can survive on a hotter globe; and physicists who are contemplating shooting tiny diamonds into the stratosphere to cool the earth. One way to look at human civilization, says Kolbert, is as a ten-thousand-year exercise in defying nature. In *The Sixth Extinction*, she explored the ways in which our capacity for destruction has reshaped the natural world. Now she examines how the very sorts of interventions that have imperiled our planet are increasingly seen as the only hope for its salvation. By turns inspiring, terrifying, and darkly comic, *Under a White Sky* is an utterly original examination of the challenges we face.

The Forever Crisis Adam Day, 2024-08-01 This book is an introduction to complex systems thinking at the global governance level. It offers concepts, tools, and ways of thinking about how systems change that can be applied to the most wicked problems facing the world today. More than an abstract argument for complexity theory, the book offers a targeted critique of today’s highest-profile proposals for improving the governance of our environment, security, finance, health, and digital space. It suggests that we should spend less effort and resources on upgrading existing institutions, and more on understanding how they (and we) relate to each other. The volume will be essential reading for public policymakers, NGOs and think tanks, foreign policy experts, government officials, and global decision-makers.

Speed & Scale John Doerr, 2021-11-09 “If you care about climate change, John Doerr’s new book, *Speed & Scale*, offers concrete steps that we can all take to make a difference.” - Barack Obama With clear-eyed realism and an engineer’s precision, Doerr lays out the practical actions, global ambitions, and economic investments we need to avert climate catastrophe. Guided by real-world solutions, *Speed & Scale* features unprecedented, firsthand accounts from climate leaders such as Laurene Powell Jobs, Christiana Figueres, Al Gore, Mary Barra, John Kerry, and dozens of other intrepid policymakers, innovators, and scientists. In *Speed & Scale*, Doerr presents a compelling 10-step plan to cut greenhouse gas emissions to net zero by 2050—the global goal we need to reach to ensure a livable Earth for generations to come. From electrifying our energy grid to fixing our global food supply chain to capturing carbon from the air, *Speed & Scale* contains practical solutions for policymakers and entrepreneurs alike. As the world confronts an urgent climate crisis, Doerr reminds us that it is also the greatest economic opportunity of our lifetimes. Whether you’re a climate scientist or someone striving to make a difference in your local community, this book will help you to activate the sustainable solutions the world urgently needs. Praise for *Speed & Scale*: “Everybody should get *Speed & Scale* by John Doerr.” - Meryl Streep “A practical guide for participation in decarbonizing the global economy, a task as challenging as it is urgent.” - Christiana Figueres

Universities on Fire Bryan Alexander, 2023-03-28 Scientists agree that we are on the precipice of a global climate crisis. How will it transform colleges and universities? In 2019, intense fires in the San Francisco Bay Area closed universities and drove afflicted people to shelter at other campuses. At the same time, extraordinary fires ravaged eastern Australia. Several universities responded by promising material and research support to damaged businesses while also hosting refugees and emergency response teams in student residence halls. This was an echo of the devastation wreaked by Hurricane Katrina on Tulane University in 2005. In *Universities on Fire*, futurist Bryan Alexander explores higher education during an age of unfolding climate crisis. Powered by real-world examples and the latest research, Alexander assesses practical responses and strategies by surveying contemporary programs and academic climate research from around the world. He establishes a model of how academic institutions may respond and offers practical pathways forward for higher education. How will the two main purposes of education—teaching and research—change as the world heats up? Alexander positions colleges and universities in the broader social world, from town-gown relationships to connections between how campuses and civilization as a whole respond to this epochal threat. Current studies of climate change trace the likely implications across a range of domains, from agriculture to policy, urban design, technology, culture, and human psychology. However, few books have predicted or studied the effects of the climate crisis on colleges and universities. By connecting climate research to a deep, futures-informed analysis of academia, *Universities on Fire* explores how climate change will fundamentally reshape higher education.

Scrubbing the Sky Paul McKendrick, 2023-02-07 An in-depth look at the people and the science behind our attempts to pull carbon dioxide out of the atmosphere with direct air capture. Drawing on interviews with stakeholders at the intersection of climate science, energy technology, and public policy, Paul McKendrick's investigation traces more than 20 years of technological development with direct air capture, from Biosphere 2; to multi-million dollar promises from Richard Branson, Bill Gates, and Elon Musk; to the opening of Orca, the world's largest commercial direct air capture facility, in Iceland in 2021. The question of what will be necessary for direct air capture to reach a meaningful scale, and how much it will cost, has fueled intense scientific and political debate, and spurred a value chain that spans finance, industry, technology, policy, and academia. McKendrick's clear and riveting prose presents the full story of this fascinating pursuit for the first time, inviting readers to learn more about this critical climate intervention option.

The Coming Wave Mustafa Suleyman, 2025-04-01 NEW YORK TIMES BESTSELLER • An urgent warning of the unprecedented risks that AI and other fast-developing technologies pose to global order, and how we might contain them while we have the chance—from a co-founder of the pioneering artificial intelligence company DeepMind and current CEO of Microsoft AI “A fascinating, well-written, and important book.”—Yuval Noah Harari “Essential reading.”—Daniel Kahneman “My favorite book on AI.”—Bill Gates, *GatesNotes* A Best Book of the Year: CNN, Economist, Bloomberg, Politico Playbook,

Financial Times, The Guardian, CEO Magazine, Semafor • Winner of the Inc. Non-Obvious Book Award • Finalist for the Porchlight Business Book Award and the Financial Times and Schroders Business Book of the Year Award We are approaching a critical threshold in the history of our species. Everything is about to change. Soon you will live surrounded by AIs. They will organize your life, operate your business, and run core government services. You will live in a world of DNA printers and quantum computers, engineered pathogens and autonomous weapons, robot assistants and abundant energy. None of us are prepared. As co-founder of the pioneering AI company DeepMind, part of Google, Mustafa Suleyman has been at the center of this revolution. The coming decade, he argues, will be defined by this wave of powerful, fast-proliferating new technologies. In *The Coming Wave*, Suleyman shows how these forces will create immense prosperity but also threaten the nation-state, the foundation of global order. As our fragile governments sleepwalk into disaster, we face an existential dilemma: unprecedented harms on one side, the threat of overbearing surveillance on the other. How do we ensure the flourishing of humankind? How do we maintain control? How do we navigate the narrow path to a successful future? This groundbreaking book from the ultimate AI insider establishes “the containment problem”—the task of maintaining control over powerful technologies—as the essential challenge of our age.

Born of Fire and Rain M. L. Herring, 2024-10-29 Go beyond the scenery of the Pacific temperate rainforest to witness how complex ecosystems survive in a world of upheavals If you live on a rapidly changing planet, you’d be wise to learn how it works. The giant old forests on a skinny stretch of land on the far west coast of North America have a lot to say about living in a twitchy world. In this engaging book science writer M. L. Herring takes readers into the Pacific temperate rainforest at the tumultuous edge of a shifting continent in a precarious moment of time. Readers peek behind the magnificent scenery into a forest of ancient trees, exploding mountains, disappearing owls, tsunamis, megafires, and ten million people to learn what it means to be a forest in a world of upheavals. Through Herring’s words and pictures, readers drift into the canopy through masses of ferns and lichens, burrow into soil through hair-thin threads of fungi, and plunge headlong through a watershed flushed with rain and snowmelt. Readers experience the temperate rainforest through science and art as it faces a shifting climate and the shifting priorities of a constantly changing society. The book journeys beyond the grid of latitude and longitude and into places only one’s imagination can fit, to discover what it means to be human in an ecological world.

Horizon Work Adriana Petryna, 2022-04-12 This book argues that a world characterized by runaway climate change needs radically new models of scientific and practical expertise to effectively address the emergency--

Critical Approaches to Online Learning Julian McDougall, 2025-02-28 Online learning has become an increasing presence in higher education course design, with most courses combining physical real time engagement with asynchronous learning activity. Now, however, there is a greater need for this one-stop guide to critical practice in this area, as we rethink the role of digital in the social practices of university learning and teaching. This book provides a critical and contemporary ‘deep

dive' into the socio-material, technological and pedagogical practices at work in virtual and digital higher education. Examples are drawn from across and between disciplinary pedagogies with a focus on blended and hybrid approaches and the pivot to fully online made urgent by Covid-19 but drawing on existing best practice. The Critical Practice in Higher Education series provides a scholarly and practical entry point for academics into key areas of higher education practice. Each book in the series explores an individual topic in depth, providing an overview in relation to current thinking and practice, informed by recent research. The series will be of interest to those engaged in the study of higher education, those involved in leading learning and teaching or working in academic development, and individuals seeking to explore particular topics of professional interest. Through critical engagement, this series aims to promote an expanded notion of being an academic - connecting research, teaching, scholarship, community engagement and leadership - while developing confidence and authority.

Escaping Nature Orrin H. Pilkey, Charles O. Pilkey, Linda P. Pilkey-Jarvis, Norma J. Longo, Keith C. Pilkey, Fred B. Dodson, Hannah L. Hayes, 2024-01-26 Industrial and agricultural greenhouse gas emissions are rapidly warming Earth's climate, unleashing rising seas, ocean acidification, melting permafrost, powerful storms, wildfires, floods, deadly heat waves, droughts, tsunamis, food shortages, and armed conflict over shrinking water supplies while reducing nutritional levels in crops. Billions of people will become climate refugees. Hotter temperatures will allow tropical diseases to spread into temperate regions. Higher levels of CO₂, allergens, dust, and other particulate matter will impair our physical and mental health and even reduce our cognitive abilities. Climate change disproportionately affects the world's poor. It also harms Nature, and could ultimately trigger a sixth mass extinction. In *Escaping Nature*, Orrin H. Pilkey and his coauthors offer concrete suggestions for how to respond to the threats posed by global climate change. They argue that while we wait for the world's governments to get serious about mitigating climate change we can adapt to a hotter world through technological innovations, behavioral changes, nature-based solutions, political changes, and education.

Economic Transformation Johannes Wolf, 2024-06-03 This book discusses the requirements and preconditions for transforming the economy in order to achieve defined goals while maintaining and utilizing the efficiency of markets. It shows how economic concepts and practices need to be reconsidered and revised in the face of enormous ecological damage and significant economic inequality across much of the world. The book systematizes essential ecological and social targets and presents factors influencing Economic Transformation. Various transformation concepts are discussed with regard to their contribution to adequate economic design and corresponding options for action are developed. Businesses, private households, the state and the commons are involved in these reflections, but also supranational institutions and (civil) society. The ecological compatibility of the economy and the reduction of excessive divergencies in income and wealth are the guiding principles of the overall considerations. In addition, the extent to which the concerns of Economic Transformation

are reflected in the government programs of the USA, Great Britain, South Africa and Germany is examined. The book will be of interest to anyone who shares the belief that increasing well-being in a market-oriented society must go hand in hand with ecological compatibility and improved social equity, both globally and within societies.

Learning Strategies for Sustainable Organisations Bryan Hopkins, 2022-05-05 Learning Strategies for Sustainable Organisations explores sustainability in the context of organisational practice and its implications for learning. Based on a systems thinking approach, it provides a thorough grounding in the principles of systems thinking and tools that can be used to help implement sustainability-focused learning strategies. Increasingly, organisations are recognising the importance of adapting their practices to become more sustainable. Drawing on the Agenda 2030 Sustainable Development Goals as a framework, new knowledge, skills and attitudes are required to help provide products and services that align with changing social and ecological environments and better serve the communities of which they are a part. This book is a practical guide showing how to facilitate sustainability learning and development within organisations, explaining how to identify gaps in current practice, take into account different contexts and perspectives about what sustainability means, and evaluate results following implementation. Learning resources include chapter summaries, illustrations, reflection points, mind maps and further reading. Written by an independent performance and learning consultant with extensive experience working with international organisations, this book provides a necessary toolkit for human resource development directors, training managers, chief sustainability officers and management consultants specialising in sustainable development.

Waters of the United States Royal C Gardner, 2024-12-19 In 2023, the Supreme Court made one of its most devastating rulings in environmental history. By narrowing the legal definition of 'waters of the United States' (WOTUS), the court opened the floodgates to unregulated pollution. But while tremendously consequential, the decision was also simply the latest in a long series of battles over WOTUS, and which rivers, streams, lakes, ponds, wetlands, and perhaps even farm fields were to be protected by the Clean Water Act of 1972. Waters of the United States is an unprecedented exploration of this history--and its importance for today's efforts to conserve a critical natural resource. The book not only examines how bodies of water are legally defined (and therefore protected), but who gets to decide on these definitions. The result is a fascinating look at the ongoing power struggle between the president and federal agencies, the courts, the states, and Congress, over water quality. Waters of the United States offers the detailed analysis necessary for any lawyer or environmental advocate to understand the nuances of water policy, while spinning a compelling narrative for readers who have never cracked a law book. The unique mix of insights into environmental law, history, and politics is required reading for anyone who cares about the future of the nation's water.

Management Footsteps and Foundations Ian Waitt, 2023-04-25 This important work will serve to change irrevocably the course, nature and future of management education. For the first time, the foundations of management are brought to

life through historical analysis. Never attempted or achieved before, the book takes the reader on a journey through almost the whole of human history, viewed from a management perspective. The study of management will be utterly transformed by this daringly innovative new paradigm for the understanding of the types of human management, the different approaches, practices and systems, and their development over time. The book also provides a summation of the author's accumulation of over two decades of experience and knowledge in management education, and three decades of applied action in the world of business.

Wild Anthropocene Louise Economides, 2025-04-17 *Wild Anthropocene* examines four key areas—the politics of deep time, neoliberalism's socio-ecological impacts, global population growth and inter-species entanglement—to demonstrate how literature illuminates progressive solutions to Anthropocene challenges. The book argues that technological mitigation of contemporary environmental crises must be complimented by a politics committed to multispecies justice. Central to this new politics is the project of reimagining our relationship with time as something other than its status within capitalist praxis. The book brings together poetry and fiction written by a diverse range of writers to demonstrate how contemporary literature addresses important connections between social oppression and environmental issues. It also critiques techno-managerial visions of the future that celebrate humanity's ever-growing control over ecosystems by examining multiple sources of wildness (temporal, environmental and technological) that expose the problematic ideology underwriting such aspirations. Readers will be introduced to a way of understanding the Anthropocene that, while being informed by recent discoveries in earth science and evolutionary biology, also makes a strong case for humanities-based understanding of environmental politics. This interdisciplinary text will be a useful addition to theoretical discussions on the Anthropocene for scholars, researchers and students in the environmental humanities, literary studies, ecocriticism and environmental philosophy.

Homo Ecophagus Warren M. Hern, 2022-09-30 *Home Ecophagus* by Warren M. Hern is a wide-ranging look at the major problems for the survival of not just the human species, but all other species on Earth due to human activities over the past tens of thousands years. The title of the book indicates Hern's new name for the human species: The man who devours the ecosystem. Over the course of its evolution, Hern observes, humans have evolved cultures and adaptations that have now become malignant and that the human species, at the global level, has all the major characteristics of a malignant neoplasm – converting all plant, animal, organic, and inorganic material into human biomass or its adaptive adjuncts and support systems. Hern contends that this process is incompatible with continued survival of the human species and most other species on the planet, offering a diagnosis and prognosis of the current environmental impasse.

Mourning in the Anthropocene Joshua Trey Barnett, 2022-08-01 Enormous ecological losses and profound planetary transformations mean that ours is a time to grieve beyond the human. Yet, Joshua Trey Barnett argues in this eloquent and urgent book, our capacity to grieve for more-than-human others is neither natural nor inevitable. Weaving together personal

narratives, theoretical meditations, and insightful readings of cultural artifacts, he suggests that ecological grief is best understood as a rhetorical achievement. As a collection of worldmaking practices, rhetoric makes things matter, bestows value, directs attention, generates knowledge, and foment feelings. By dwelling on three rhetorical practices—naming, archiving, and making visible—Barnett shows how they prepare us to grieve past, present, and future ecological losses. Simultaneously diagnostic and prescriptive, this book reveals rhetorical practices that set our ecological grief into motion and illuminates pathways to more connected, caring earthly coexistence.

Devils Hole Pupfish Kevin C. Brown, 2021-09-07 The Devils Hole pupfish is one of the rarest vertebrate animals on the planet; its only natural habitat is a ten-by-sixty-foot pool near Death Valley, on the Nevada—California border. Isolation in Devils Hole made the fish different from its close genetic relatives, but as *Devils Hole Pupfish* explores, what has made the species a survivor is its many surprising connections to the people who have studied, ignored, protested or protected it.

The Good-Enough Life Avram Alpert, 2023-09-19 How an acceptance of our limitations can lead to a more fulfilling life and a more harmonious society We live in a world oriented toward greatness, one in which we feel compelled to be among the wealthiest, most powerful, and most famous. This book explains why no one truly benefits from this competitive social order, and reveals how another way of life is possible—a good-enough life for all. Avram Alpert shows how our obsession with greatness results in stress and anxiety, damage to our relationships, widespread political and economic inequality, and destruction of the natural world. He describes how to move beyond greatness to create a society in which everyone flourishes. By competing less with each other, each of us can find renewed meaning and purpose, have our material and emotional needs met, and begin to lead more leisurely lives. Alpert makes no false utopian promises, however. Life can never be more than good enough because there will always be accidents and tragedies beyond our control, which is why we must stop dividing the world into winners and losers and ensure that there is a fair share of decency and sufficiency to go around. Visionary and provocative, *The Good-Enough Life* demonstrates how we can work together to cultivate a good-enough life for all instead of tearing ourselves apart in a race to the top of the social pyramid.
