**Zoonosis** Jacob Lorenzo-Morales, 2012-04-04 Zoonotic diseases are mainly caused by bacterial, viral or parasitic agents although unconventional agents such as prions could also be involved in causing zoonotic diseases. Many of the zoonotic

diseases are a public health concern but also affect the production of food of animal origin thus they could cause problems in international trade of animal-origin goods. A major factor contributing to the emergence of new zoonotic pathogens in human populations is increased contact between humans and animals. This book provides an insight on zoonosis and both authors and the editor hope that the work compiled in it would help to raise awareness and interest in this field. It should also help researchers, clinicians and other readers in their research and clinical usage.
