Murray-Darling Basin, Australia Barry Hart,Neil Byron,Nick Bond,Carmel Pollino,Michael Stewardson,2020-10-23

Murray-Darling Basin, Australia: Its Future Management is a much-needed text for water resources managers, water, catchment, estuarine and coastal scientists, and aquatic ecologists. The book first provides a summary of the Murray-Darling River system: its hydrology, water-related ecological assets, land uses (particularly irrigation), and its rural and regional communities; and management within the Basin, including catchments and natural resources, water resources, irrigation, environment, and monitoring and evaluation. Additionally, the recent major water reforms in the Basin are discussed, with a focus particularly on the development and implementation of the Basin Plan. Murray-Darling Basin, Australia: Its Future Management then provides an analysis of the next set of policy and institutional reforms (environmental, social, cultural and economic) needed to ensure the Basin is managed as an integrated system (including its water resources, catchment and estuary) capable of adapting to future changes. Six major challenges facing the Basin are identified and discussed, particularly within the context of predicted changes to the climate leading to an increased frequency of drought and a hotter and dryer future. Finally, a 'road map' or 'blueprint' to achieve more integrated management of the Basin is provided, together with some 'key lessons' of relevance to others involved in the management of multijurisdictional river Basins. - Provides a consolidated account of the Murray-Darling Basin system; an area of global relevance to those interested in rebalancing river systems where the water resources have been over allocated - Offers a detailed analysis of the current system and its management, with a focus on water and ecosystem management - Discusses a number of key challenges, particularly those related to climate change, facing future reforms to the Murray-Darling Basin Plan - Provides a blueprint for changes needed to ensure the Basin is managed as an integrated whole (from catchment to coast)

Integrated Groundwater Management Anthony J Jakeman,Olivier Barreteau,Randall J Hunt,Jean-Daniel

Rinaudo,Andrew Ross,2016-08-05 The aim of this book is to document for the first time the dimensions and requirements of effective integrated groundwater management (IGM). Groundwater management is a formidable challenge, one that remains one of humanity's foremost priorities. It has become a largely non-renewable resource that is overexploited in many parts of the world. In the 21st century, the issue moves from how to simply obtain the water we need to how we manage it sustainably for future generations, future economies, and future ecosystems. The focus then becomes one of understanding

the drivers and current state of the groundwater resource, and restoring equilibrium to at-risk aquifers. Many interrelated dimensions, however, come to bear when trying to manage groundwater effectively. An integrated approach to groundwater necessarily involves many factors beyond the aquifer itself, such as surface water, water use, water quality, and ecohydrology. Moreover, the science by itself can only define the fundamental bounds of what is possible; effective IGM must also engage the wider community of stakeholders to develop and support policy and other socioeconomic tools needed to realize effective IGM. In order to demonstrate IGM, this book covers theory and principles, embracing: 1) an overview of the dimensions and requirements of groundwater management from an international perspective; 2) the scale of groundwater issues internationally and its links with other sectors, principally energy and climate change; 3) groundwater governance with regard to principles, instruments and institutions available for IGM; 4) biophysical constraints and the capacity and role of hydroecological and hydrogeological science including water quality concerns; and 5) necessary tools including models, data infrastructures, decision support systems and the management of uncertainty. Examples of effective, and failed, IGM are given. Throughout, the importance of the socioeconomic context that connects all effective IGM is emphasized. Taken as a whole, this work relates the many facets of effective IGM, from the catchment to global perspective.

Indigenous Engineering for an Enduring Culture Cat Kutay, Elysabeth Leigh, Juliana Kaya Prpic, Lyndon Ormond-Parker, 2022-09-28 For many millennia, Indigenous Australians have been engineering the landscape using sophisticated technological and philosophical knowledge systems in a deliberate response to changing social and environmental circumstances. These knowledge systems integrate profound understanding of country and bring together knowledge of the topography and geology of the landscape, its natural cycles and ecological systems, its hydrological systems and natural resources including fauna and flora. This enables people to manage resources sustainably and reliably, and testifies to a developed, contextualised knowledge system and to a society with agency and the capability to maintain and refine accumulated knowledge and material processes. This book is a recognition and acknowledgement of the ingenuity of Indigenous engineering which is grounded in philosophical principles, values and practices that emphasise sustainability, reciprocity, respect, and diversity, and often presents a much-needed challenge to a Western engineering worldview. Each chapter is written by a team of authors combining Indigenous knowledge skills and academic expertise, providing examples of collaboration at the intersection of Western and Indigenous engineering principles, sharing old and new knowledges and skills. These varied approaches demonstrate ways to integrate Indigenous knowledges into the curricula for Australian engineering degrees, in line with the Australian Council of Engineering Deans' Position Statement on Embedding Aboriginal and Torres Strait Islander perspectives into the engineering curriculum first published in 2017.

Sustainable Groundwater Management Jean-Daniel Rinaudo, Cameron Holley, Steve Barnett, Marielle Montginoul, 2020-03-16 This book describes and analyses the diversity of possible approaches and policy pathways to

implement sustainable groundwater development, based on a comparative analysis of numerous quantitative management case studies from France and Australia. This unique book brings together water professionals and academics involved for several decades in groundwater policy making, planning or operational management to reflect on their experience with developing and implementing groundwater management policy. The data and analysis presented accordingly makes a significant contribution to the empirical water management literature by providing novel, real world insights unpublished elsewhere. The originality of the contributions also lies in the different disciplinary perspectives (hydrogeology, economics, planning and social sciences in particular) adopted in many chapters. The book offers a unique comparative analysis of France, Australia and experiences in countries such as Chile and the US to identify similarities, but also fundamental differences, which are analysed and presented as alternative policy options – these differences being mainly related to the role of the state, the community and market mechanisms in groundwater management.

New Directions for Law in Australia Ron Levy, Molly O'Brien, Simon Rice, Pauline Ridge, Margaret Thornton, 2017-09-22 For reasons of effectiveness, efficiency and equity, Australian law reform should be planned carefully. Academics can and should take the lead in this process. This book collects over 50 discrete law reform recommendations, encapsulated in short, digestible essays written by leading Australian scholars. It emerges from a major conference held at The Australian National University in 2016, which featured intensive discussion among participants from government, practice and the academy. The book is intended to serve as a national focal point for Australian legal innovation. It is divided into six main parts: commercial and corporate law, criminal law and evidence, environmental law, private law, public law, and legal practice and legal education. In addition, Indigenous perspectives on law reform are embedded throughout each part. This collective work—the first of its kind—will be of value to policy makers, media, law reform agencies, academics, practitioners and the judiciary. It provides a bird's eye view of the current state and the future of law reform in Australia.

Reforming Water Law and Governance Cameron Holley, Darren Sinclair, 2018-04-27 This book identifies the most effective water policy tools and innovations, and the circumstances that foster their successful implementation by taking a comparative look at a world-leading 'laboratory' of water law and governance: Australia. In particular, the book analyses Australia's 20-year experience implementing a hybrid governance system of markets, hierarchical regulation, and collaborative integrated water planning. Australia is acknowledged as a world leader in water governance reform, and an examination of its relatively mature water law and governance system has great significance for many international academics and jurisdictions. This book synthesises practical lessons and theoretical insights from Australia, as well as recommendations from comparative analysis with countries such as the United States to provide useful guidance for

policymakers and scholars seeking to apply water instruments in a wide range of policy contexts. The book also advances our understanding of water and broader environmental governance theory and is a valuable reference for scholars, researchers and students working in law, regulation and governance studies – especially in the field of water and environmental law. Bridging Science And Policy Implication For Managing Climate Extremes Hong-sang Jung, Bin Wang, 2017-12-19 Since 1980, the number of climate-related disasters has been greatly increased globally. Scientific consensus based on the IPCC fifth report suggested that global warming would bring more intense and frequent extreme climate events. These climate-related disasters hinder the achievement of sustainable economic growth and prosperity by disrupting supply chains, impeding production, destroying infrastructure, and necessitating high-cost rebuilding and recovery. To mitigate the climate extreme risks and possible losses, it is essential to maximize the utilization of scientific outputs and to share best practices in

disaster risk management. Aligned with such purposes, Asia-Pacific Economic Cooperation (APEC) Climate Center (APCC) hosts the APEC Climate Symposium (APCS) every year. APCS focused on drought prediction and management in 2013, climate extremes and hydrological disaster in 2014, and efficient use of climate information for disaster risk management in 2015. This book aims to compile some of the important results from the latest research in climate extreme prediction and services and its application studies with a focus on climate extremes such as typhoons, droughts, and floods based on the APCS presentations during 2013-2015.

Earth Observation for Water Resources Management Luis García, Diego Rodríguez, Marcus Wijnen, Inge Pakulski, 2016-04-14 Water systems are building blocks for poverty alleviation, shared growth, sustainable development, and green growth strategies. They require data from in-situ observation networks. Budgetary and other constraints have taken a toll on their operation and there are many regions in the world where the data are scarce or unreliable. Increasingly, remote sensing satellite-based earth observation is becoming an alternative. This book briefly describes some key global water challenges, perspectives for remote sensing approaches, and their importance for water resources-related activities. It describes eight key types of water resources management variables, a list of sensors that can produce such information, and a description of existing data products with examples. Earth Observation for Water Resources Management provides a series of practical guidelines that can be used by project leaders to decide whether remote sensing may be useful for the problem at hand and suitable data sources to consider if so. The book concludes with a review of the literature on reliability statistics of remote-sensed estimations.
