Solutions Guide, Introductory Chemistry, a Foundation, Introductory Chemistry, Basic Chemistry, Fourth Edition, Zumdahl James F. Hall, 2000

Chemical Principles Peter Atkins, Loretta Jones, 2007-08 Written for calculus-inclusive general chemistry courses, Chemical Principles helps students develop chemical insight by showing the connections between fundamental chemical ideas and their applications. Unlike other texts, it begins with a detailed picture of the atom then builds toward chemistry's frontier, continually demonstrating how to solve problems, think about nature and matter, and visualize chemical concepts as working chemists do. Flexibility in level is crucial, and is largely established through clearly labeling (separating in boxes) the calculus coverage in the text: Instructors have the option of whether to incorporate calculus in the coverage of topics. The multimedia integration of Chemical Principles is more deeply established than any other text for this course. Through the unique eBook, the comprehensive Chemistry Portal, Living Graph icons that connect the text to the Web, and a complete set of animations, students can take full advantage of the wealth of resources available to them to help them learn and gain a deeper understanding.

Organogold Compounds Hubert Schmidbaur, 1980-03-28 With contributions by numerous experts

Compounds with Noble Gases, H, O, N, F, and Cl Gertrud Hönes, Karl Koeber, Irmgard Kreuzbichler, Beate Schwager, Ulrike Neu-Becker, Gertrude Swoboda, 1992-12-04 The volume covers the interactions and compounds of gold with noble gases, hydrogen, oxygen, nitrogen, fluorine, and chlorine. Along with the expanding use of gold in recent years, for example in electronics and in aerospace equipment, there has been an impressive series of advances in the chemistry of gold compounds and of discoveries of unusual oxidation states. Hydrogen forms a nonstoichiometric solid phase, AuH_n at high pressures with a maximum value of $n=0.43$. Hydrides such as AuH exist only in the gaseous state. The predominant oxide is that of gold(III), Au_2O_3 . The lower-valent oxides Au_2O and AuO form during anodic oxidation of gold. There still is no evidence for definite gold(I) and gold(II) fluorides, whereas AuF_3 is stable below 500°C , while it is immediately decomposed by water. The first pentavalent gold compound, $(\text{Xe}_2\text{F}_{11})\text{AuF}_6$, was synthesized in the early 1970's. Later, a number of new AuV compounds were prepared, among them AuF_5 . The highest oxidation state of gold ever realized is +7 in the recently synthesized AuF_7 . The major portion of this volume deals with gold chlorine-compounds. Solid AuCl has a polymeric structure with Au and Cl atoms forming zigzag chains, while the gaseous compound consists of dimeric Au_2Cl_2 molecules. AuCl_2 , which was first thought to be a compound of gold(II), actually is a mixed-valence gold(I)-gold(III) compound with the net formula Au_4Cl_8 . The crystal structure of AuCl_3 comprises discrete, planar Au_2Cl_6 molecules. The most important water-soluble gold compounds are the tetrachloroauric acid, HAuCl_4 , and its sodium and potassium salts, easy to obtain by dissolution of gold in aqua regia. They are used besides AuCl_3 to prepare nearly all other gold compounds, mostly in solution via the tetrachloroaurate (III) ion AuCl_4^- .

The Further Inventions of Daedalus David E. H. Jones, 1999 If so, or indeed if not, then Daedalus is your man. This book brings together 148 of his highly scientific proposals on these and allied matters. Daedalus, the court jester in the palace of science and engineering, began his amazing career in 1964 in the weekly magazine *New Scientist*. His remit, brilliantly achieved, was to confuse the scientific community in general. In 1988 he graduated to *The Guardian* and also to the prestigious pages of *Nature*, where he bamboozles the Nobel prizewinners. His delusive proposals steam boldly out along the solid track of accepted science and technology, but somehow rapidly go off the rails -- or do they? This second compilation of his finest schemes includes a look at one from his first compilation (*The Inventions of Daedalus*, 1982) which did indeed wind up in the Nobel prize lists.
