Circumcision and Human Rights George Denniston, Frederick Hodges, Marilyn Fayre Milos, 2008-12-23 "There is hardly a reason to circumcise a little boy for medical reasons because those medical reasons don't exist", said Dr. Michael Wilks, Head of Ethics at the British Medical Association, who admitted that doctors have circumcised boys for "no good reason". In the United States, parts of Africa, the Middle East, and in the Muslim world, 13.3 million infant boys and 2 million girls have part or all of their external sex organs cut off for reasons that defy logic and violate basic human rights. Doctors, parents, and politicians have been misled into thinking that circumcision is beneficial, necessary, and harmless. In *Circumcision and human rights*, internationally respected experts in the fields of medicine, science, politics, law, ethics, sociology, anthropology, history, and religion present the latest research on this tragedy, as a part of the worldwide campaign to end sexual mutilation. They outline steps for eradicating this abusive practice to enable males and females the dignity of living out their lives with all the body parts with which they were born.

Sexual Mutilations George C. Denniston, Marilyn Fayre Milos, 2013-03-09 Sexual mutilation is a global problem that affects 15.3 million children and young adults annually. In terms of gender, 13.3 million boys and 2 million girls are

involuntarily subjected to sexual mutilation every year. While it is tempting to quantify and compare the amount of tissue removed from either gender, no ethical justification can be made for removing any amount of flesh from the body of another person. The violation of human rights implicit in sexual mutilation is identical for any gender. The violation occurs with the first cut into another person's body. Although mutilation is a strong term, it precisely and accurately describes a condition denoting any disfigurement or injury by removal or destruction of any conspicuous or essential part of the body. While such terms as circumcision and genital cutting are less threatening to our sensitivities, they ultimately do a disservice by masking the fact of what is actually being done to babies and children. Although the courageous example of the survivors of sexual mutilation indicates that humans can certainly live and even reproduce without all of their external sexual organs, this biological phenomenon does not, however, justify subjecting a person to sexual mutilation. The remarkable resilience of the human body is a testament to the importance nature places on reproduction rather than a vindication for surgical practices that compromise this function.
