Charles H. Zastrow, Sarah L. Hessenauer

Family Systems Application to Social Work Karen Gail Lewis, 2015-07-24 Originally published in 1991, this title is a valuable social work text which demonstrated how to apply family system concepts to clinical situations encountered in work with inner-city populations at the time. Unlike traditional theories in clinical social work which were oriented toward the individual, this fascinating book offers a paradigm for social work that encompasses the client, his or her immediate and extended family, the community, the government, and the social worker. The family systems concepts in this refreshing volume are illustrated by case examples addressing the specific issues of AIDS and drug abuse, homelessness, foster care, wife abuse, care of those with intellectual disabilities, and adoption issues. Social workers and social work students can still gain perspective from these insightful chapters and will discover that it is not pathological people that make difficult populations, but difficult life situations that breed pathology.

Skills for Using Theory in Social Work James A. Forte, 2014-02-05 Using theory, research evidence and experiential knowledge is a critical component of good social work. This unique text is designed to help social work students and practitioners to integrate theorizing into practice, demonstrating how to search for, select and translate academic knowledge for practical use in helping people improve their lives and environments. Presenting 32 core skills, *Skills for Using Theory in Social Work* provides a conceptual foundation, a vocabulary, and a set of skills to aid competent social work theorizing. Each chapter outlines the knowledge and action components of the skill and its relationship to core practice behaviours, along with learning and reflection activities. The lessons are divided into four parts: Section one discusses foundational material, including self-identification as a theorist-practitioner, the deliberate use of the term theory, and a social work approach to the selection of knowledge. Section two focuses on the adept use of theorizing skills. It covers identifying assumptions, using concepts, formulating propositions, organizing theory elements inductively or deductively, summarizing and displaying the elements of a theory, gathering and organizing assessment information and communicating with clients and colleagues about tentative theories. Section three includes lessons preparing social workers for the construction of useful middle-range theories including causal theories and interpretive theories and for testing and sharing these practical theories. Section four presents skills to develop critical thinking about theoretical knowledge. These include avoiding the misuse of theory, judging a theory using scientific standards, judging a theory by professional standards, critiquing theory in its cultural and historical

context and making judgments about the likely long-term impact of a theory. This key text will help readers to demonstrate their expertise in reflective, competent, and theory-informed practice. It is suitable for all social work students and practitioners, particularly those taking practice, theory and human behaviour in the social environment courses.

101 Social Work Clinical Techniques Francis J. Turner, William Rowe, 2013-05-08 The purpose of the book is to enhance the concept of Technique in the teaching and practice of Social Work. Over the years Technique has not been stressed as a part of practice even though the actual practice of Social Work consists of the utilization of techniques in addition to theory and the process of assessment and diagnosis. The book seeks to achieve its goal in four ways. It addresses the way the concept of Technique has or has not been used over the years. It addresses the need for a clear definition of technique. It analysis the qualities that Technique should have at this point in our history of clinical practice. It then formulates and presents a definition of technique for our thesis based on this definition. It then presents a brief discussion of 101 Techniques discussed in contemporary literature by discussing each one's place in practice a bit about its history and necessary knowledge skills to use responsibly. It addresses the latter by grouping a level of risk involved in its utilization.

Suitable for a generalist approach, this book illustrates the value of applying theory to practice in a variety of social work roles, across diverse fields and facing assorted challenges. The first section provides a practical foundation for beginning to use theory in your social work practice. Section two looks at how you can translate and integrate fourteen theories commonly found in social work across each phase of the planned change process. The theories discussed are: behavioural, interpretive anthropology, psychodynamic, evolutionary biology, cognitive, symbolic interactionism, strengths, social constructionism exchange economics, role, ecological, critical, feminist, and systems theory. The final section addresses some key issues for real life social work practice, including common barriers to using theory in practice, the potential for multi-professional communication and theory-sharing, and developing an integrative theoretical model for your own personal practice. Linking to core competencies identified by the Council of Social Work Education, this text supports social work students and practitioners in developing vital skills, including critical thinking, applying theory and the effective use of the planned change process.

At a time when economic globalization, armed conflict, and ecological devastation continue to undermine human rights and the possibilities for social justice, the need for linking a structural analysis to social work practice is greater than ever. The second edition of this popular social work practice text more fully addresses the connection between social justice and human rights. It includes a discussion of social work's role in promoting peace and responding to environmental problems. It also places a greater attention on the links between social work theories/concepts and practice skill/responses. The text has been updated and revised throughout with four new chapters: social work and human rights, cultural competence and practice with immigrant communities, social work and mental health communities, and practice with

couples and families. Detailed case studies demonstrate the integration of theory, policy, and practice.
