Educatrónica Ruiz Velasco Sánchez, Enrique, 2007-01-01 Este libro es un producto de investigación que recupera veinte años de experiencia en una disciplina de reciente creación, la Inteligencia Artificial en Educación. Su abordaje es complemente innovador, y en su contenido se desarrollan los aspectos teórico-metodológicos y prácticos que la sustentan. Un objetivo primordial de Educatrónica es favorecer en los estudiantes la integración en distintas áreas del conocimiento para la adquisición de habilidades tecnológicas, de información, de comunicación y de nociones científicas, involucrándolos en un proceso de desarrollo de proyectos, con el fin de generar en ellos un pensamiento sistémico, estructurado, lógico, abstracto y formal.

Curso de autocad para arquitectos. Inmaculada Esteban, Fernando Valderrama, 2007 Este libro está escrito usando una receta infalible para el fracaso: contentar a todos los que desean usar bien AutoCAD. Para los que empiezan, presenta el eficaz método de los tutoriales: una entrada rápida, por inmersión, en el manejo del programa, a base de realizar ejemplos paso a paso. No se explica la teoría o los comandos; simplemente se dibuja. Es un curso acelerado y un quitamiedos. Para los que ya saben, se añaden unas lecciones monográficas que mejorarán su manera de trabajar con AutoCAD, con opciones y conceptos avanzados que no han tenido la oportunidad o el tiempo de probar hasta ahora. También encontrarán comentarios críticos sobre el programa, trucos y preguntas sin respuesta. Con las ediciones previas han aprendido a dibujar con AutoCAD numerosos estudiantes de la Universidad Europea de Madrid, así como profesionales en el Taller de Informática del Colegio Oficial de Arquitectos de Madrid. Otros muchos lo han utilizado en solitario. Todos los problemas son específicos de la arquitectura, con énfasis en la composición de los planos, la impresión a escala y el control de los grafismos, como rotulación, tipos de línea, gruesos y colores. El libro se concentra en el dibujo en dos dimensiones, pero contempla también las necesidades de coordinación propias de un estudio de arquitectura, ya que propone recomendaciones para mejorar el trabajo en equipo, la normalización, la reutilización de la información digital y buenas prácticas de organización. Por último, todos los modelos son edificios aprobados para su uso: proyectos de Mies, Utzon o Siza. También se han añadido, pensando en los alumnos de Arquitectura Técnica, recursos y bloques dinámicos para realizar detalles constructivos. Así, al mismo tiempo que se dibuja, se aprende a entender la buena arquitectura y la construcción, disfrutando con ello.

Montaje de conjuntos y estructuras fijas o desmontables ROLDÁN VILORIA, JOSÉ, 2021-11-04 El presente libro desarrolla los contenidos de la Unidad Formativa (UF445) Montaje de conjuntos y estructuras fijas o desmontables, incluida en el módulo formativo (MF0088_1) Operaciones de montaje, correspondiente al Certificado de Profesionalidad FMEE0108 Operaciones auxiliares de fabricación mecánica, regulado por el Real Decreto 1216/2009, de 17 de julio. Se inicia con la presentación de las herramientas auxiliares, que son muchas y muy variadas, que ayudarán al profesional en el desarrollo de las tareas mecánicas (fabricación, mantenimiento y montaje), como las llaves de apriete, las dinamométricas y de grados, los destornilladores, los alicates, los martillos y las mazas, los granetes, las limas, las terrajas y los machos de roscar, los extractores, las herramientas de corte, los útiles de fijación y otras herramientas complementarias. A continuación, se estudian las uniones para formar subconjuntos, conjuntos, máquinas e instalaciones, en los que participan uniones fijas y uniones desmontables, así como la realización de estas uniones. El objetivo final es que el profesional mecánico esté preparado para montar conjuntos y estructuras metálicas mediante uniones fijas o desmontables, teniendo en cuenta las normas de prevención de riesgos laborales y de protección del medioambiente. Otras uniones que se incluyen son las que se realizan con productos adhesivos, pegamentos, colas, resinas, cintas adhesivas, así como el empleo de plásticos, polietilenos, poliuretanos y otros. Se analiza la importancia que tienen las hojas de proceso, la preparación y la disposición en orden de montaje de los materiales, la identificación de los elementos componentes de conjuntos y subconjuntos y las normas de seguridad en el trabajo, para la ejecución de las operaciones de montajes mecánicos. Se presta también especial atención al almacenaje y transporte de materiales, los equipos y las máquinas auxiliares necesarios para su manipulación: polipastos, grúas, transpaletas y otros. Finalmente, se repasan el mantenimiento de primer nivel y la limpieza de maquinaria y herramientas, destacando la importancia que tienen la gestión de residuos, embalajes y la protección del medio ambiente. El contenido de esta obra está acompañado de gran cantidad de imágenes y tablas con gran nivel de detalle, completando cada capítulo con actividades finales de repaso, para comprobar lo que se ha aprendido. José Roldán Viloria ha tenido una intensa vida profesional en el campo de la industria, desarrollando y materializando proyectos, que ha compaginado con la enseñanza en la Formación Profesional y con la elaboración de más de 60 libros técnicos en los que se recogen de forma clara y precisa

las diferentes tecnologías desarrolladas y su aplicación práctica (mecánica, neumática, hidráulica, electricidad, fluidos y energías renovables). Algunos de estos títulos han sido traducidos.
