EDUCACIÓN EN FÍSICA Fernando Flores,2003-07-03 La enseñanza de las ciencias exactas es un campo pletórico de retos y de problemas, pero también de oportunidades y posibilidades. La física, en este ámbito, se convierte en un excelente ejemplo para mostrar temas como los modelos conceptuales, las ideas previas, los errores en los libros de texto y cómo valerse de esos errores para la enseñanza. Los autores, reconocidos investigadores de esta área, se dirigen a docentes y a todo aquel interesado en la enseñanza de las ciencias, aportando importantes conocimientos de este tema, y siembran líneas de investigación por explorar. El libro ofrece una visión panorámica de proyectos de estudio acerca de la enseñanza de la Física que van desde la formación de docentes hasta las propuestas de enseñanza, pasando por las investigaciones de naturaleza más teórica como los aspectos históricos y la propia construcción del conocimiento.

Engineering Design Applications III Andreas Öchsner,Holm Altenbach,2020-03-05 This book provides an update on recent advances in various areas of modern engineering design, such as mechanical, materials, computer, and process engineering, which provide the foundation for the development of improved structures, materials, and processes. The modern design cycle is characterized by the interaction of different disciplines and a strong shift toward computer-based approaches involving only a small number of experiments for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also connected to environmental demands. In the transportation industry (e.g. automotive or aerospace), where there is a demand for greater fuel efficiency, one solution is lighter structures and/or

improved processes for energy conversion. Another emerging area is the interaction of classical engineering with the health and medical sector.

La actividad experimental en electrostática Edwin Germán García Arteaga,2024-10-08 El presente trata los problemas de la formación en física a nivel universitario para futuros docentes. Desde un estudio de caso relacionado con la electrostática se pone en evidencia que la enseñanza descontextualizada de los contenidos de la física, la ausencia de la actividad experimental, el razonamiento lógico-matemático reducido a la memorización de fórmulas y ecuaciones, y la apropiación de leyes y teorías sin sentido histórico son parte de los problemas identificados. Como alternativa a dichos problemas, se presenta un estudio histórico-crítico de la electrostática, en torno a los problemas fundamentales que tuvieron los científicos en la construcción de esta rama de la física y que resultan significativos en la enseñanza actual, desde los estudios de William Gilbert sobre la electricidad y el magnetismo en el s. XVI hasta los aportes experimentales de Faraday y Maxwell en el s. XIX; desde la perspectiva de campos, pasando por los trabajos experimentales de Stephen Gray, Charles du Fay y Benjamín Franklin, entre otros. Finalmente se hace una propuesta alternativa para enseñar la electrostática desde un enfoque constructivista, haciendo énfasis en el sentido histórico y experimental que acompaña la física.
