Topografía para minería subterránea Miquel Estruch Serra,2002 El presente libro ofrece una completa descripción de los instrumentos y métodos propios de los levantamientos planimétricos y altimétricos en galerías, túneles y explotaciones mineras en el subsuelo, con lo que viene a cubrir una laguna existente en publicaciones relacionadas con la topografía propiamente minera y subterránea. Su principal objetivo es proporcionar a los estudiantes de ingeniería técnica minera y a los técnicos profesionales en las tareas mineras los conocimientos necesarios para llevar a cabo todos los trabajos topográficos necesarios para la orientación y levantamientos de planos del interior de las minas, el estudio y control de los hundimientos mineros, los proyectos y cálculos de rompimientos mineros, los de la comunicación de túneles, así como el

replanteo y guiado de dichas labores subterráneas. Se abordan los sistemas clásicos, los modernos automatizados y computarizados, así como la aplicación del rayo láser en los diferentes trabajos topográficos de orientación y guiado de las labores subterráneas. Es un complemento del libro de Cartografía minera del mismo autor.

El soporte infraestructural de la ciudad Manuel Herce Vallejo, Joan Miró Farrerons, 2004-12-31 El presente libro pretende aportar una visión integrada del proyecto y dimensionado de las redes de servicios urbanos, analizando sus funciones e interrelaciones, planteadas desde sus parámetros de diseño, fundamentales en su colaboración a la construcción de la ciudad. Dicho enfoque destaca el hecho de constituir el soporte infraestructural de una ciudad, con una permanencia temporal superior a cualquier otra intervención sobre ella, de modo que condiciona y apoya su extensión sobre el territorio y la forma en que ésta se manifiesta. Con ello se busca superar la visión simplificada que aportan los manuales técnicos de cálculo, enfocados siempre desde la perspectiva del funcionamiento de cada una de las redes de servicios, y frecuentemente descontextualizados respecto a su entorno social y geográfico. De ahí la preferencia por acentuar los parámetros fundamentales que afectan al proyecto de esas infraestructuras desde la lógica de la construcción de la ciudad y con la gradación que exige la variedad de niveles de urbanización con que ésta se da actualmente en el mundo -- Iniciativa Digital Politècnica.
