

Perfil Longitudinal Y Secciones Transversales Topografía

Isidro Giol y Soldevilla

Topografía de obras Ignacio de Corral Manuel de Villena, 2009-07 El objetivo de este libro es profundizar en todo lo que se refiere a la topografía aplicada al replanteo en la obra civil. Para ello se estudian los métodos de replanteo y los sistemas de cálculo de las diversas alineaciones que definen una obra lineal. Gran parte del contenido está destinado al trabajo en obras lineales, que es donde mayor dificultad puede haber en los cálculos. No obstante, en el capítulo 13 se estudian aspectos geométricos de diversos tipos de obras. Se mantiene la diferenciación entre planimetría (capítulos 2 a 5) y altimetría (6 a 9), siendo los capítulos 8 y 9 los que estudian la sección transversal para el caso de las carreteras. Se habla también en profundidad de las mediciones y del proyecto de una obra de ingeniería.

Topografía subterránea para minería y obras Estruch Serra, Miquel, Tapia Gómez, Ana, 2003-02-27 El presente libro ofrece una descripción exhaustiva de los instrumentos y métodos propios de los levantamientos planimétricos y altimétricos en galerías, explotaciones mineras, túneles y todo tipo de obras a realizar en el subsuelo, con lo que viene a cubrir una laguna existente en publicaciones relacionadas con la topografía propiamente subterránea. Su objetivo principal es proporcionar a los estudiantes y técnicos profesionales en las tareas mineras y obras subterráneas los conocimientos necesarios para la orientación y el levantamiento de planos del interior de las minas, el estudio y control de los hundimientos mineros, la determinación de las intrusiones mineras, los proyectos y cálculos de rompimientos mineros, los de la comunicación de túneles, así como el replanteo y la dirección de dichas labores subterráneas. Se abordan los sistemas clásicos tradicionales, los modernos automatizados y computarizados, así como la aplicación del rayo láser en los diferentes trabajos topográficos de orientación y dirección de las labores subterráneas. Todos los conocimientos que se exponen son importantes para los técnicos que han de ejecutar trabajos subterráneos, ya que si no poseen una formación adecuada se

desorientan, debido a las condiciones tan particulares de dichas operaciones, pierden mucho tiempo tratando de aplicar los procedimientos clásicos de la superficie y con frecuencia deben afrontar problemas que les parecen imposibles de resolver. Todo ello les ocurre por la falta de una instrucción indispensable que se ofrece en este libro, y que es de aplicación en la minería y en las obras a realizar en el subsuelo.

Ingeniería de vías agroforestales HERRÁEZ GARRIDO, FERNANDO,MORENO VEGA, ALBERTO,2019-05-14 Diseño, cálculo, construcción y mantenimiento de caminos En España, la longitud actual de la red de caminos rurales y vías o pistas agroforestales resulta incluso superior a la de carreteras. Estas infraestructuras lineales, aparte de comunicar pequeños núcleos poblacionales, prestan servicio a todos los aprovechamientos agroforestales y al turismo rural, cuyas actividades podrían verse muy afectadas en caso de no existir dicha red. Entre las atribuciones de los antiguos Ingenieros y actuales Graduados y Másteres en Ingeniería Agronómica y de Montes está la de proyectar caminos, ya sean agrícolas o forestales, así como las de dirigir, controlar o certificar las obras para la construcción y el mantenimiento de los mismos. Pero las actuales necesidades de comunicación, junto con la modernización del sector agroforestal, sobre todo en lo que se refiere a maquinaria e infraestructuras, ha modificado el concepto de “camino rural”, demandando estudios mucho más detallados de su geometría y sus firmes en función de las intensidades de tráfico presentes y futuras. La utilización de máquinas agroforestales cada vez más potentes y pesadas, capaces de arrastrar cargas remolcadas de hasta 24 t, unido al aumento de las dimensiones y velocidades de los vehículos en general, ha dado lugar a unas mayores exigencias constructivas en los viales agroforestales. Unos caminos que, dado el ajustado presupuesto existente para este tipo de obras, precisan y exigen de fórmulas y técnicas duraderas y a la vez económicamente viables, tanto en su diseño, como en su ejecución y mantenimiento. Por todo ello, se ha considerado necesario elaborar un libro donde se aborden todas estas cuestiones. Una publicación dirigida tanto a estudiantes de ingenierías agrícolas y forestales, como a los titulados de las mismas o a cualquier profesional que tenga una relación directa o indirecta con esta materia.

Atlas Teresita Canchala Nastar, Yesid Carvajal Escobar, Camilo Ocampo Marulanda, Julián David Mera Franco, Juan Camilo Triana Vargas, 2024-11-26 Atlas: Eventos extremos de precipitación en Nariño es resultado de un proyecto de investigación que analiza la variabilidad climática y los eventos extremos de precipitación entre 1983 y 2019 en el departamento de Nariño; una región localizada en la zona ecuatorial y caracterizada por su compleja fisiografía, que incluye las costas del Pacífico, los Andes y el piedemonte Amazónico. Las precipitaciones en los Andes nariñenses presentan un comportamiento bimodal, con dos períodos lluviosos bien definidos que favorecen la agricultura de secano, actividad altamente sensible al clima, lo que destaca la necesidad de contar con información precisa para la gestión del territorio y el desarrollo humano sustentable. En esta obra se analizan con especial énfasis las fases extremas del fenómeno el Niño-Oscilación del Sur (ENOS), principal modo de la variabilidad climática interanual, que influye en las dinámicas climáticas del departamento e impacta significativamente la agricultura y los recursos hídricos. Desde un enfoque interdisciplinario, se abordan aspectos fundamentales sobre la climatología de Nariño, utilizando el índice estandarizado de precipitación (SPI) para caracterizar eventos de sequía y excesos de lluvia. Constituye una contribución significativa en la climatología en Nariño y provee una base sólida de conocimientos para mejorar la resiliencia de las comunidades frente a impactos de la variabilidad y el cambio climático. Su enfoque metodológico y la presentación de la información lo convierten en un documento de especial interés para académicos, planificadores, tomadores de decisiones y profesionales del sector, ya que

proporciona información científica valiosa para la gestión del riesgo climático y el desarrollo sustentable del departamento.
