[Remaking Berlin](#) Timothy Moss, 2020-09-29 An examination of Berlin's turbulent history through the lens of its water and energy infrastructures. In Remaking Berlin, Timothy Moss takes a novel perspective on Berlin's turbulent twentieth-century history, examining it through the lens of its water and energy infrastructures. He shows that, through a century of changing regimes, geopolitical interventions, and socioeconomic volatility, Berlin's networked urban infrastructures have acted as medium and manifestation of municipal, national, and international politics and policies. Moss traces the coevolution of Berlin and its infrastructure systems from the creation of Greater Berlin in 1920 to remunicipalization of services in 2020, encompassing democratic, fascist, and socialist regimes. Throughout, he explores the tension between obduracy and change in Berlin's infrastructures. Examining the choices made by utility managers, politicians, and government officials, Moss makes visible systems that we often take for granted. Moss describes the reorganization of infrastructure systems to meet the needs of a new unitary city after Berlin's incorporation in 1920, and how utilities delivered on political promises; the insidious embedding of repression, racism, autarky, and militarization within the networked city under the Nazis; and the

resilience of Berlin's infrastructures during wartime and political division. He examines East Berlin's socialist infrastructural ideal (and its under-resourced systems), West Berlin's insular existence (and its aspirations of system autarky), and reunified Berlin's privatization of utilities (subsequently challenged by social movements). Taking Berlin as an exemplar, Moss's account will inspire researchers to take a fresh look at urban infrastructure histories, offering new ways of conceptualizing the multiple temporalities and spatialities of the networked city.

Amnesiopolis Eli Rubin,2016-02-04 *Amnesiopolis* explores the construction of Marzahn, the largest prefabricated housing project in East Germany, built on the outskirts of East Berlin in the 1970s and 1980s, and touted by the regime as the future of socialism. It focuses particularly on the experience of East Germans who moved, often from crumbling slums left over as a legacy of the nineteenth century, into this radically new place - one defined by pure functionality and rationality - a material manifestation of the utopian promise of socialism. Eli Rubin employs methodologies from critical geography, urban history, architectural history, environmental history, and everyday life history to ask whether their experience was a radical break with their personal pasts and the German past. *Amnesiopolis* asks: can a dramatic change in spatial and material surroundings sever the links of memory that tie people to their old life narratives, and if so, does that help build a new socialist mentality in the minds of historical subjects? The answer is yes and no-as much as the East German state tried to create a completely new socialist settlement, divorced of any links to the pre-socialist past, the massive construction project uncovered the truth buried-literally-in the ground, which was that the urge to colonize the outskirts of Berlin was not new at all. Furthermore, the construction of a new city out of nothing, using repeating, identical buildings, created a panopticon-like effect, giving the Stasi the possibility of more complete surveillance than they previously had.

Roof Construction Manual Eberhard Schunck,Hans Jochen Oster,Rainer Barthel,Kurt Kießl,2013-01-21 the Roof Construction Manual is a comprehensive reference work on the construction of pitched roofs, containing over 1800 plans and 220 photographs. Thirteen fundamental roof types and the relevant materials including thatch, wood, slate, tile, concrete, fibrous cement, bitumen, glass, metal, membranes, and synthetic materials are documented in detail. Essential topics such as ventilation, vapour and wind seals, insulation and drainage, renovation and energy conservation are examined. As with all the Construction Manuals, some 38 built examples illustrate the theoretical details, paying particular attention to important features such as the ridge, hip, eaves, roof valley, verge, and penetration. A compact presentation of the load-bearing physics and structures as well as current norms and standards make this volume an indispensable standard work for all architects

and engineers.

Lead Pipe Rehabilitation and Replacement Techniques Gregory J. Kirmeyer,2000 The information contained in this manual can be used by utilities that need to plan and execute a lead service line replacement program to meet the requirements of the Safe Drinking Water Act's Lead and Copper Rule. European utilities will be able to use this manual as a guide to meet the water quality directives of the European Union regarding lead in drinking water. This manual can be used by utilities to screen and evaluate lead pipe rehabilitation and replacement technologies that best fit their needs. Selection criteria guidelines can be used by utilities to develop tailored programs for their site-specific applications. Findings from this project are based on state-of-the-art technologies at the time of the study. Guidelines can be used to help select and prioritize technologies; however, these guidelines are not intended to be used to identify the only suitable technology alternative for a site-specific application. Some techniques may have limited availability, particularly those technologies currently under development.
