Coastal Marine Ecosystems of Latin America U. Seeliger,B. Kjerfve,2013-03-14 Coastal and marine ecosystems, some severely degraded, other still pristine, control rich resources of inshore environments and coastal seas of Latin America's Pacific and Atlantic margins. Conflicts between the needs of the region's nations and diminishing revenues and environmental quality have induced awareness of coastal ecological problems and motivated financial support for restoration and management. The volume provides a competent review on the structure, processes and function of 22 important Latin American coastal marine ecosystems. Each contribution describes the environmental settings, biotic components and structure of the system, considers trophic processes and energy flow, evaluates the modifying influence of natural and human perturbations, and suggests management needs. Although the focus of the book is on basic ecological research, the results have application for coastal managers.

The Ecology of the Barí Stephen Beckerman,Roberto Lizarralde,2013-11-01 Inhabiting the rainforest of the southwest Maracaibo Basin, split by the border between Colombia and Venezuela, the Barí have survived centuries of incursions. Anthropologist Roberto Lizarralde began studying the Barí in 1960, when he made the first modern peaceful contact with this previously unreceptive people; he was joined by anthropologist Stephen Beckerman in 1970. The Ecology of the Barí showcases the findings of their singular long-term study. Detailing the Barí's relations with natural and social environments, this work presents quantitative subsistence data unmatched elsewhere in anthropological publications. The authors' lengthy

longitudinal fieldwork provided the rare opportunity to study a tribal people before, during, and after their aboriginal patterns of subsistence and reproduction were eroded by the modern world. Of particular interest is the book's exploration of partible paternity—the widespread belief in lowland South America that a child can have more than one biological father. The study illustrates its quantitative findings with an in-depth biographical sketch of the remarkable life of an individual Barí woman and a history of Barí relations with outsiders, as well as a description of the rainforest environment that has informed all aspects of Bari history for the past five hundred years. Focusing on subsistence, defense, and reproduction, the chapters beautifully capture the Barí's traditional culture and the loss represented by its substantial transformation over the past half-century.

Estuaries of South America Gerardo M.E. Perillo, Maria C. Piccolo, Mario Pino-Quivira, 2012-12-06 The original idea of this book started when we were making a residual fluxes study of the Paranagua Coastal Lagoon (Brazil) near the colonial town of Guaraque~aba. Among the beautiful mangroves of this Brazilian National Park, between profile and profile, we wondered why South American estuaries were little known in the international arena. Besides, most of the papers published in the literature are based on biological research. Practically nothing is known about their geomorphology and dynamics. That night, while we were walking along the hilly streets of the town, we decided that the only way to have an idea about the degree of advance in the geomorphology and dynamics of our estuaries was to ask the proper South American researchers to write review articles about the estuaries in which they were working or about the general state of the art of the Geomorphology and Physical Oceanography of the estuaries of his/her country. The book grew from then on. Although initially many scientists offer to write a chapter, we ran into the same problem these researchers have to publish in journals, they felt that their English was not good enough and withdrew. However, we are very satisfied about the number and quality of the contributions which also passed a very strong review process.

Perspectives on Integrated Coastal Zone Management Wim Salomons, Kerry Turner, Luiz D. de Lacerda, S. Ramachandran, 2012-12-06 All coastal areas are facing a growing range of stresses and shocks, the scale of which now poses threats to the resilience of both human and environmental coastal systems. Responsible agencies are seeking better ways of managing the causes and consequences of the environmental change process in coastal zones. This volume discusses the basic principles underpinning a more integrated approach to coastal management and highlights the obstacles that may be met in practice in both developed and developing countries. Successful strategies will have to encompass all the elements of management, from planning and design through financing and implementation, as highlighted in this book.
