Tratado de Nutrición Angel Gil (DRT) Hernandez, 2010-09-20 El Tratado de Nutrición, 2{487} edición, aporta conocimientos que abarcan desde la bioquímica y la biología molecular, la fisiología y la bromatología, hasta la nutrición en el estado de salud y la nutrición clínica. Dirigido por el Profesor Ángel Gil Hernández y con la participación de cerca de 300 autores, es la obra de nutrición más completa que se ha escrito hasta ahora. El objetivo fundamental del Tratado de Nutrición es servir de obra de consulta para los profesionales relacionados con la Nutrición y de estudio para los estudiantes de los nuevos grados en el ámbito de las ciencias de la salud (Nutrición y Dietética Humana, Medicina, Farmacia, Biología, Bioquímica y Biología Molecular, y Enfermería) y de los másteres asociados. A la calidad técnica y gráfica de cada uno de los tomos se suma la opción de acceder al sitio Web que incluye animaciones, vídeos, aplicaciones informáticas y numerosos documentos de interés. Todo ello constituye un atractivo de enorme valor para todos los profesionales de la salud interesados en la nutrición. Este tomo está dedicado al estudio de las bases fisiológicas, bioquímicas y moleculares de la nutrición. En él se detallan tanto los aspectos relacionados con la absorción, la digestión y el metabolismo de los macro y micronutrientes, como los efectos de los nutrientes sobre el crecimiento, el desarrollo y la muerte celular, y las interacciones entre los genes y

Fundamentos de Inmunología básica y su correlación clínica Erik Honigmann de Beraza, 2018-02-15 La inmunología es una ciencia que relativamente tiene poco de conocerse, por lo que los descubrimientos en torno a ella crecen día con día. Esto ha hecho que la cantidad de información actual sea vasta y compleja, dificultando su análisis y entendimiento. Actualmente existen diversos libros de texto, artículos y recursos electrónicos que intentan ser un medio importante para aquellos que se inician en esta ciencia, sin embargo, en muchos casos como en los recursos electrónicos, esta información es errónea y en el caso de los libros de texto y artículos muchos de ellos no se encuentran asequibles. Este material de apoyo ayuda a mejorar el aprendizaje de la materia, ya que cada tema del libro es explicado de una manera sencilla y sintetizada de tal manera que su comprensión sea mucho más rápida. Facilita la lectura y el estudio en el alumno y en caso de querer profundizar más en los temas, se expone la bibliografía al final de cada capítulo. Además de lo anterior, se espera que a futuro el profesionalista utilice este material como referencia para las diversas actividades que tenga que realizar, tanto académicamente como profesionalmente. Por ello, en este libro se revisan los temas más importantes y relevantes entorno a la inmunología, dándole un enfoque importante en el área clínica. Para el desarrollo de este material se realizó una investigación documental de diversas fuentes bibliográficas, lo que permitió el desarrollo de seis capítulos. Uno introductorio en donde se habla sobre cómo nació la inmunología, algunos conceptos básicos, tales como la diferencia entre

inmunología, resistencia e inmunidad, la función que tiene la respuesta inmunológica, su clasificación actual, algunos aspectos que hay que tener en cuenta sobre la inmunidad, las células que forman al sistema inmunológico, una revisión básica sobre su anatomía fisiología e histología del sistema inmunológico y la formación o nacimiento de linfocitos T y B. Un segundo capítulo en donde se repasan los mecanismos inespecíficos de defensa, también llamado inmunidad innata; aquí se realiza una revisión sobre las barreras físicas, químicas y biológicas, sitios inductores de la respuesta inmunológica, el sistema de remoción de partículas, la función de algunas moléculas (péptidos, citocinas, quimiocinas y complemento) frente a agentes extraños, el proceso de inflamación, fiebre y fagocitosis. En el tercer capítulo se revisan los mecanismos específicos de defensa o la inmunidad humoral; aquí se repasan algunos conceptos sobre inmunógenos, antígenos, inmunoglobulinas, la importancia de los linfocitos T y B y el HLA. Del cuarto capítulo al sexto, se revisan temas en donde la inmunología tiene aplicación, ya sea para entender enfermedades o para realizar tratamientos alternativos. Por ejemplo, se revisan algunos desórdenes inmunológicos, vacunas en México y en el mundo, sueros e inmunoglobulinas y algunos inmunomoduladores y para finalizar algunas áreas de interés de la inmunología, en donde se discuten temas como la muerte celular, envejecimiento, cáncer y la respuesta inmunológica, inmunología en la obesidad, inmunoparasitología y una nueva área de estudio denominada psiconeuroendocrinoinmunología.

Temas Selectos de Biología I Rosalino Vázquez Conde, Rosalino Vazquez Lopez, 2014 Este libro se desarrolla con un enfoque constructivista y un atractivo diseño a color enriquecido con las siguientes secciones: En contacto con tus conocimientos; Temas selectos de Biología I y tu comunidad; Una ventana al conocimiento; Evaluación formativa aparece estratégicamente a lo largo del texto para confirmar que el alumno vaya asimilando los nuevos conocimientos; Evaluación sumativa contiene diversos reactivos capaces de demostrar que el estudiante logró aprender el tema; Ampliando el conocimiento (incluye un glosario y bibliografía sugerida). Esperamos que este libro sea una herramienta novedosa, interactiva y útil para despertar en los estudiantes el interés por la Biología.

Ecología y salud Gabriel Félix Burgos, Ecología y salud, 4ª edición, es un texto actualizado, conciso y ordenado, una herramienta fundamental para el alumno de pregrado y estudiantes de enfermería; pues le facilitará la adquisición de conocimientos en biología, microbiología, parasitología, además de distintas enfermedades, y sus interacciones entre sí; promoviendo el cuidado del ambiente y la prevención de problemas de salud pública. Ecología y salud, 4ª edición se fundamenta y conceptualiza con base en la triada ecológica, la cual está compuesta por el ambiente, huésped y parásitos. Cada capítulo se conforma por distintos esquemas, haciendo énfasis en los determinantes sociales de la salud; además, contiene actividades de aprendizaje que le permiten al alumno repasar los temas expuestos. Cabe señalar, que también se incluye un glosario, el cual contiene las explicaciones de las palabras más utilizadas en toda la obra.

Immune system and cannabis Pharmacology University, 2022-02-25 Have you ever wondered how your body defends

you from disease? It happens because we have the immune system. And what is the immune system? The immune system is a network of interconnected organs, tissues and cells whose mission is to protect us against foreign agents. In this way it is possible to have a defense response against an infectious agent. It is located in the bone marrow, thymus, tonsils, adenoids, Peyer's patches, liver, spleen and lymph nodes, among others. How does it work? Through the detection of pathogens and its response to eliminate them. The success of maintaining health can be attributed to the ability of the immune system to recognize and consequently respond against microbes or substances in a targeted manner. What is the inflammatory response? It is the response of a living organism to tissue damage caused by a foreign agent that may be physical, chemical or biological. A homeostatic process in which the Nervous System and the Immune System participate, oriented to destroy, dilute or isolate the aggressor agent and is intimately related to the process of coagulation and repair, with the purpose of correcting the damage caused. At this moment you must be wondering What is the relationship between cannabinoids and the immune system? There is a reason for the relationship. Cannabinoids have been used for many years for different purposes. Recently, discoveries have emerged about their mechanisms of action and therapeutic targets, as well as the alterations in the endocannabinoid system observed in various diseases and conditions that manifest with pain, inflammation, autoimmune pathologies and different organ-specific disorders. In addition, fundamental elements of the endocannabinoid system are found in the cells of the immune system and you will learn about this in detail in this ebook. A lot of questions, right? These and other questions will be solved with this ebook that Pharmacology University brings to you.

Biología del desarrollo Scott F. Gilbert, 2005 Resumen: La Biología del Desarrollo puede ser concebida como una imagen dinámica del desarrollo en la que se conjugan distintos aspectos provenientes de la morfología clásica y experimental, de la genética y de la biología celular. La obra consta de cuatro partes: Principios de biología del desarrollo, Desarrollo embrionario temprano, Desarrollo embrionario tardío y Ramificaciones de la biología del desarrollo. Versión excelentemente traducida al español de la séptima edición inglesa original, el Gilbert será sin duda bien recibido entre los universitarios interesados en este campo (biólogos, veterinarios, médicos, bioquímicos y farmacéuticos). Es una obra bien conocida y apreciada, dimensionada hábilmente en la frontera del libro de texto y el libro de referencia. Biología del Desarrollo es de lectura casi obligada para los profesionales que quieran mantenerse o estar al día en embriología. Más que un texto de biología del desarrollo, es una auténtica escuela de pensamiento en este campo.

Régimen jurídico del aroma y de la contaminación por hedor Basto Gómez, Elizabeth S., 2016-08-16 Estamos, efectivamente, rodeados de olores. La medicina los ha estudiado, ha investigado cómo afectan a la mente humana y también las relaciones que se establecen entre la amplia zona destinada al olor con otras zonas del cerebro. El ser humano ha tratado de rentabilizar el sentido del olfato llevándolo a los negocios de los aromas y perfumes. Hoy se busca que el olor identifique marcas, eventos y ciudades. El planteamiento horizontal del olor desde el aroma al hedor nos muestra el amplio espectro que puede captar, clasificar y memorizar el sistema olfativo para disfrute o tortura de los individuos expuestos. El recurrir en este estudio al apoyo en otras ciencias es para demostrar que las personas, los animales y hasta las plantas pueden resultar afectados por el olor, la contaminación odorífera afecta a la inviolabilidad del domicilio, a la calidad de vida y genera consecuencias en la salud física y mental por la sobre exposición generando daños materiales y morales como parte de los efectos de la contaminación.
