Automobile Engineering Dr. Sushil Kumar Choudhary, Dr. Pramod Kumar Mishra, Automobile engineering is the one of the subject of mechanical and automobile engineering branch. It deals with the various types of automobiles, their mechanism of transmission systems and its applications. Basically all the types of vehicles work on the principle of internal combustion processes. Different types of fuels are burnt inside the cylinder at higher temperature to get the transmission motion in the vehicles. It deals with the design and creation of vehicles used as means of transportation by road. Essentially, it derived from mechanical engineering. More specifically, it is the branch of engineering that deals with the design, development, manufacturing, production, testing, repairing, control and management of automobiles. It is a combination of different elements of mechanical engineering, electrical engineering, electronic engineering, software engineering and safety engineering. Therefore, every mechanical and automobile engineering student should have the knowledge of automobile engineering its mechanism and its various applications. This Automobile engineering lab manual deals with everything about automobiles and practices to propel them.
