Química ambiental de sistemas terrestres Xavier Domènech, José Peral, 2012-01-01 Los procesos químicos asociados al medio terrestre se describen aquí tratando de forma conjunta los fenómenos que ocurren en el suelo y en la hidrosfera. Esta visión conjunta de la química de ambos medios permite explicar una gran cantidad de fenómenos con relativamente pocos recursos conceptuales: la constitución química del sistema terrestre, la interfase sólido-agua, los procesos ácido-base y redox y el comportamiento y destino de contaminantes, conceptos que finalmente se utilizan para exponer las distintas tecnologías aplicadas para la remediación de los sistemas edáficos e hidrosféricos contaminados. Este texto, basado en la amplia experiencia de los autores en la docencia de Química Ambiental, va dirigido a universitarios de las titulaciones de Química, Ciencias Ambientales e Ingeniería Química, así como de alumnos de otras especialidades con un cierto bagaje en química (Farmacia, Biología, Biotecnología, Ingeniería Agrícola, etcétera).

Control de la calidad del agua Walter J. Jr Weber, 2021-02-22 La obra está redactada de tal forma que puede utilizarse como un libro de texto para: un curso amplio de un semestre de duración sobre los procesos físico-químicos, durante el cual se expliquen extensamente los doce capítulos; y un curso de un semestre de duración durante el cual se estudien con profundidad los capítulos que tratan de los procesos convencionales y de los que se aplican corrientemente; o como en nuestra opinión sería más conveniente, un curso de dos semestres durante el cual se estudien con profundidad los conceptos sobre la dinámica de procesos y todas las materias del libro.

Desarrollo con identidad Robert E. Rhoades, 2006 Se reporta seis años de investigación multidisciplinaria acerca del manejo de recursos naturales en Cotacachi, así como las interacciones hombre-ambiente con relación a la biodiversidad, suelo y agua del lugar. Se narra cómo los indígenas, a lo largo del tiempo, han utilizado los recursos que encuentran a su alcance y han formado el paisaje andino contemporáneo.

TRATAMIENTO DE AGUAS INDUSTRIALES : AGUAS DE PROCESO Y RESIDUALES Miguel Rigola Lapeña, 1989 Estudia las principales características del agua y las diferentes tecnologías de tratamiento disponibles en la actualidad para su aplicación industrial. Realiza descripciones de datos y presenta criterios de tipo práctico que permiten hacer un diagnóstico de un tratamiento existente o de una instalación nueva. Expone cuál es la naturaleza de las aguas residuales, cómo seleccionar un tratamiento y sus procesos. Estudia los parámetros para medir la calidad del agua, presenta un resumen

de los efectos más importantes, muestra la clasificación de estos parámetros y describe los índices de estabilidad de las aguas. Índice resumido del libro: - Fundamentos de la química del agua - Parámetros de calidad de las aguas - Criterios generales en la selección de un tratamiento de aguas - Procesos unitarios de tratamiento de aguas - Tratamientos de agua para generadores de vapor - Tratamiento de aguas de refrigeración - Tratamiento de aguas residuales.

Potabilización del agua Barreto Tejada, Juan Alejandro, 2015-05-08 Esta obra ha sido escrita con la ambiciosa intención de corregir los vacíos y errores que se encuentran en los textos de diseño de plantas potabilizadoras, disponibles actualmente en el mercado. Esta intención inicial conlleva, inevitablemente, a preponderar el fin último de brindarle al lector un texto que no sólo llene sus expectativas de aprendizaje y consulta, sino que también le explique, sin profundas y a veces innecesarias disquisiciones teóricas, los aspectos más importantes del diseño, del control de los procesos y del trascendental papel de los estudios de laboratorio en la proyección matemática y conceptual de las plantas de tratamiento de agua potable.

Introducción a la química ambiental Stanley E. Manahan, 2006 Este nuevo libro de S. Manahan es una introducción concisa a la Química ambiental que está estrechamente relacionada con sus textos sobre Química verde y Ecología industrial. El concepto de Química ambiental va más allá de la mera discusión sobre la contaminación y los problemas ambientales y pretende enfocar los conocimientos actuales en la resolución de esos problemas basándose en la sostenibilidad y en la prevención de la contaminación. De esta forma, se invocan constantemente disciplinas emergentes como la Ecología industrial, la Química verde y la Ingeniería verde.

Análisis de riesgos del tratamiento del agua para calderas Margarita Alba Gonzalez, 1999-01-01

Calidad del agua Carlos Alberto Sierra Ramírez, 2021-01-29 Este libro recoge los aspectos más importantes relacionados con la calidad del agua en ambientes lóticos ríos y corrientes superficiales y lénticos lagos y embalses. De una manera práctica e integrada, el texto recopila los conceptos básicos de diferentes ciencias como la estadística, la química del agua, las evaluaciones ambientales y la modelación, y los aplica para que el lector pueda diagnosticar y evaluar la calidad del agua, proponer medidas de mitigación a los problemas y establecer criterios, usos y objetivos de calidad del agua. Los temas están presentados recurriendo a la discusión teórica y presentando ejemplos prácticos de cada aspecto contemplado. Con base en lo anterior, el libro está dirigido a que sea utilizado en programas de pregrado y posgrado en ingeniería en los cursos de calidad del agua, tratamiento de aguas, contaminación de recursos hídricos, evaluaciones ambientales, etc. También, puede ser una herramienta muy importante en la planeación, ordenamiento y conservación de cuencas para las autoridades ambientales y empresas prestadoras de servicios públicos.

Guía sobre recirculación acuícola Organización de las Naciones Unidas para la Alimentación y la Agricultura, Bregnballe, J., 2025-01-28 Las estrictas restricciones ambientales para minimizar la contaminación de los criaderos y las instalaciones acuícolas terrestres en los países del norte de Europa han provocado un rápido desarrollo tecnológico, inversión e innovación en sistemas de recirculación en muchas partes del mundo. En general, la producción acuícola afecta al medio ambiente, pero los métodos de recirculación más modernos reducen considerablemente este efecto en comparación con las formas tradicionales de cría de peces. Los sistemas de recirculación ofrecen así dos ventajas inmediatas: rentabilidad y reducción del impacto medioambiental. La recirculación también garantiza una producción acuícola mayor y más estable con menos enfermedades y mejores formas de controlar los parámetros de los criaderos que influyen en el crecimiento de los peces en los sistemas de producción acuícola. Este avance es bienvenido y está totalmente en línea con el Código de Conducta para la Pesca Responsable de la FAO. Esta guía se centra en las técnicas para la conversión de métodos de cultivo tradicionales a la acuicultura recirculada y asesora al piscicultor sobre los obstáculos que deben evitarse en el camino. Las características clave de la guía son ayudar a los agricultores a convertirse a la acuicultura de recirculación; introducir la tecnología y los métodos de gestión; asesorar sobre buenas prácticas para pasar a la acuicultura con recirculación; especificar el funcionamiento de un sistema de recirculación, educación y formación del personal; proporcionar historias de casos de diferentes proyectos de recirculación.
