Pain Assessment and Management in Veterinary Medicine Caterina Di Bella, Petra Dmitrović, Alessandro Mirra, Luca Pennasilico, 2025-01-31 Pain is a complex experience with sensory and affective elements, whether associated with tissue damage or not. In veterinary medicine, its complexity is heightened by the inability of animals to communicate it as people do, despite there is plenty of scientific research showing that they perceive pain in the same way. Numerous factors complicate the diagnosis and treatment of pain in animals (e.g., species, age, location, origin and duration of pain, etc.). Scientific research is constantly updated in order to correctly identify and understand the main pathogenetic mechanisms of pain, the diagnostic tools available, the characteristics of the drugs and the non-pharmacological techniques that can be used.
