coding style - Using "super" in C++ - Stack Overflow As for chaining `super::super`, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). **How does Python's super () work with multiple inheritance?** In fact, multiple inheritance is the only case where `super()` is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. *'super' object has no attribute '__getattr__' in python3* Mar 5, 2015 · The Python attribute retrieval mechanism works in a way that a class `__getattr__` is called as "last resource" to try to get an attribute for an instance of that class. Your code is right - it fails due to your superclass of "Example" - in this case "object" - not having a `__getattr__` attribute. If you are not at a deep class hierarchy and want to perform custom attribute retrieval ... **Python: 'super' object has no attribute 'attribute_name'** After the base class's `__init__` ran, the derived object has the attributes set there (e.g. `some_var`) as it's the very same object as the self in the derived class' `__init__`. You can and should just use `self.some_var` everywhere. `super` is for accessing stuff from base classes, but instance variables are (as the name says) part of an instance, not part of that instance's class. **AttributeError: 'super' object has no attribute - Stack Overflow** Jul 9, 2018 · I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: `AttributeError: 'super' object has no attribute do_something` class Parent: def `__init__`(self):... oop - What does 'super' do in Python? - Stack Overflow Nov 3, 2015 · The one without `super` hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with `super` has greater flexibility. The call chain for the methods can be ... *Understanding Python super() with __init__() methods* Feb 23, 2009 · `Super` simply guarantees we call the correct next class's method in the method resolution order, whereas the other way hard-codes the next method to be called, which makes cooperative multiple inheritance more difficult. *super () in Java - Stack Overflow* Sep 22, 2010 · `super()` is a special use of the `super` keyword where you call a parameterless parent constructor. In general, the `super` keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. *python - replace block within { { super () } }* - *Stack Overflow* In the child template, I would like to include everything that was in the head block from the base (by calling { { `super()` } }) and include some additional things, yet at the same time replace the title block within the `super` call. **'super' object has no attribute '__sklearn_tags__'** Dec 18, 2024 · 'super' object has no

attribute '__sklearn_tags__'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions.
