Greenson, MD, is a visually stunning, easy-to-use reference covering all aspects of gastrointestinal pathology. Outstanding images - including gross pathology, a wide range of pathology stains, and detailed medical illustrations - make this an invaluable diagnostic aid for every practicing pathologist, resident, or fellow. Diagnostic Pathology Susan Carole Lester, 2014 When a patient is under anesthesia, every second counts. An intraoperative consultation provides essential information to ensure every operation has a successful conclusion. The stakes are high and the challenges are great - no special stains, limited access for consultation with colleagues, often suboptimal slide preparation, and cases that may be out of a pathologist's normal sphere of practice. Diagnostic Pathology: Intraoperative Consultation is designed to be the best resource when pathologists need assistance. No time is wasted looking for information because each chapter is directed to a specific question posed by a surgeon, such as Does this patient have pancreatic cancer?, Is there an intrauterine pregnancy?, Does this patient have lung cancer?, or Are the margins free of carcinoma?. The clinical setting and what the surgeon needs to know - and why - are explained. Specimen processing (gross and microscopic), tissue selection, and reporting of results are detailed. All major entities in the differential diagnosis are described and shown in photographs. Major pitfalls are discussed and illustrated. This is the book every pathologist will want at their side the next time a page calls them to the frozen section room. Lastly, this book features all the classic benefits of all Amirsys(R) titles, including time-saving bulleted text, key facts in each chapter, stunning annotated images, extensive index, and Amirsys eBook Advantage(TM), an online version of the print book with larger images and fully searchable text.

**Gastrointestinal Pathology** Geraint T. Williams, 2012-12-06 There have been many advances in the field of gastrointestinal pathology which are of considerable clinical significance during the 13 years since the last publication of a volume of Current Topics in Pathology devoted to this subject. Many have arisen from the application of new techniques of histochemistry, immunocytochemistry, quantitative morphometry and molecular and cell biology to gastrointestinal diseases, but some, notably the recognition of the association of *Campylobacter pylori* with the commonest type of chronic gastritis, have been achieved using such long established 'routine' histological procedures that one wonders how their significance had escaped recognition for so long. The topics covered in this volume have been selected because they present advances of relevance to the diagnostic clinical pathologist. However, they represent the personal selection of the editor, and are in no way exhaustive. Many other examples of progress in our understanding of the pathophysiology of gastrointestinal diseases have been omitted, either because of the confines of space or because they have been well reviewed recently in other publications. Most of the workload of the practising gastrointestinal pathologist involves the diagnosis and assessment either of inflammation or of neoplasia in the alimentary tract, and this is reflected in the topics presented in this book.
