Exploring Digital Libraries Karen Calhoun, 2014-01-01 A landmark textbook on digital libraries for LIS students, educators and practising information professionals throughout the world. Exploring Digital Libraries is a highly readable, thought-provoking authoritative and in-depth treatment of the digital library arena that provides an up-to-date overview of the progress, nature and future impact of digital libraries, from their collections and technology-centred foundations over two decades ago to their emergent, community-centred engagement with the social web. This essential textbook: • Brings students and working librarians up to date on the progress, nature and impact of digital libraries, bridging the gap since the publication of the best-known digital library texts • Frames digital library research and practice in the context of the social web and makes the case for moving beyond collections to a new emphasis on libraries' value to their communities • Introduces several new frameworks and novel syntheses that elucidate digital library themes, suggest strategic directions, and break new ground in the digital library literature. • Calls a good deal of attention to digital library research, but is written from the perspective of strategy and in-depth experience • Provides a global perspective and integrates material from many sources in one place - the chapters on open repositories and hybrid libraries draw together past, present and prospective work in a way that is unique in the literature. Handbook of Research on Knowledge and Organization Systems in Library and Information Science Holland, Barbara Jane, 2021-06-25 Due to changes in the learning and research environment, changes in the behavior of library users, and unique global disruptions such as the COVID-19 pandemic, libraries have had to adapt and evolve to remain up-to-date and

responsive to their users. Thus, libraries are adding new, digital resources and services while maintaining most of the old, traditional resources and services. New areas of research and inquiry in the field of library and information science explore the applications of machine learning, artificial intelligence, and other technologies to better serve and expand the library community. The Handbook of Research on Knowledge and Organization Systems in Library and Information Science examines new technologies and systems and their application and adoption within libraries. This handbook provides a global perspective on current and future trends concerning library and information science. Covering topics such as machine learning, library management, ICTs, blockchain technology, social media, and augmented reality, this book is essential for librarians, library directors, library technicians, media specialists, data specialists, catalogers, information resource officers, administrators, IT consultants and specialists, academicians, and students.

Ethics and Values in Librarianship Wallace Koehler, 2015-09-01 Ethics and Values in Librarianship: A History addresses the processes of development of library and information sciences, largely but not exclusively in a western context. It focuses on the field's ethics and values. Here, Wallace Koehler, a leading researcher in the area of information ethics, debunks the prevailing notion that library and information science concepts and ethics have and remain constant. He demonstrates that in almost all areas of practice, this is simply not so. Instead of staying the same, our professional ethics and standards have evolved or shifted in their application as well as in the recognition of those standards by practitioners and users. Some of these changes are of very recent etiology. Topics covered include: · the freedom of expression, · intellectual freedom, · libraries and democracy, · intellectual property, copyright, and fair use and, · professional qualifications and credentialing. Koehler examines the development of and changes to library and information science through practice and the writings of library and information theorists and practitioners from Varro during the reign of Julius Caesar to the present. He documents technological and social changes that have had foundational implications for the information professions and argues that ethical standards may be redefined overtime and new standards may emerge, older precepts and newer ones coexist. Not only a history, this is also one of the few contemporary books suitable for use in foundational courses and courses covering information and library ethics.

The Pataphysician's Library Ben Fisher, 2000-12-01 The Pataphysician's Library is a study of aspects of 1890s French literature, with specific reference to the traditions of Symbolism and Decadence. Its main focus is Alfred Jarry, who has proved, perhaps surprisingly, to be one of the more durable fin-de-siècle authors. The originality of this study lies in its use of the enigmatic list of books termed the livres pairs, which appears in Jarry's 1898 novel *Gestes et Opinions du docteur Faustroll*, pataphysicien, his best-known prose work. The greatest interest of the livres pairs lies in a group of works by Jarry's friends and contemporaries, primarily Leon Bloy, Georges Darien, Gustave Kahn, Catulle Mendès, Josephin Madan, Rachilde, and Henri de Regnier. Several of these authors feature as the lords of islands visited by the pataphysician Dr Faustroll in his curious voyage around Paris. In conjunction with Jarry's own works, the contemporary livres pairs serve to illustrate the vibrant and experimental atmosphere in which these authors worked.

Library and Information Science Education in the Indian Job Market. A Study of Indian Universities and Corporate

Libraries Bobby Goswami Baruah, 2019-07-09 Doctoral Thesis / Dissertation from the year 2014 in the subject Library Science, Information- / Documentation Science, grade: A, , language: English, abstract: This study examines the Information Science Education of Indian Universities and Corporate Libraries, with a specific focus on how the criteria of the Indian job Market are met within the context of this education. The Library and Information Science curriculum needs to adapt to the changes in today's job market requirement. The job market demands much more competencies, including information and communication skills. However, various studies reported a lacuna in the profession in terms of being fully compatible to the job requirement or in other words the profession fails to meet the expectations of the job market. Here, the enquiry arises as to who is accountable? Are the LIS curricula in the universities offering Library and Information Science courses not up to date and practical oriented or not at par with the job descriptions for LIS professionals in different sectors? This big question is affecting the whole profession globally, but steps have been taken in some developing countries to streamline the curricula with diverse job requirements. When we talk in terms of India, a lot has been discussed and talked about the current library and information science professionals in the context of the emerging Indian job market. But steps to modify, remodel and implement the curricula as per national and global necessities are yet to be done. This is the main problem in statement. There are two major concerns- firstly, the inclusion of ICT and non ICT course contents in the curricula and secondly the job requirements of corporate and university libraries. The critical examination of the specific needs of the corporate employees should be given due consideration in redesigning the curricula. The non-lucrative nature of jobs for the LIS professionals could also be an issue that concerns the fraternity that can be solved by dealing first with the course contents. The rationale behind this study is not only to critically examine the curriculum of the post graduate levels currently followed in India and study the job requirements of university and corporate libraries, but also to identify the discrepancies and thereby come up with some concrete measures. A review of the results on earlier empirical studies carried out in India indicates that the variables in the study (curriculum and job requirement) are examined from different perspectives of narrower scales but no studies of the intended magnitude and landscape are done so far.
