how does a floor function work? - Mathematics Stack Exchange Aug 18, 2017 · I understand what a floor function does, and got a few explanations here, but none of them had a explanation, which is what i'm after. Can someone explain to me what is going on behind the scenes ... [Solving equations involving the floor function](#) Nov 5, 2019 · Solving equations involving the floor function Ask Question Asked 12 years, 6 months ago Modified 1 year, 8 months ago *Floor Function Proof - Mathematics Stack Exchange* The floor function (also known as the entier function) is defined as having its value the largest integer which does not exceed its argument. When applied to any positive argument it represents the integer part of the argument obtained by suppressing the fractional part. **'Floor' and 'ceiling' functions - TeX - LaTeX Stack Exchange** Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do $\lceil x \rceil$ instead of $\lceil x \rceil$... **How do the floor and ceiling functions work on negative numbers?** The correct answer is it depends how you define floor and ceil. You could define as shown here the more common way with always rounding downward or upward on the number line. [How to write ceil and floor in latex? - LaTeX Stack Exchange](#) Jun 8, 2013 · Is there a macro in latex to write $\lceil x \rceil$ and $\lfloor x \rfloor$ in short form? The long form $\lceil x \rceil$ \rceil is a bit lengthy to type every time it is used. [How to represent the floor function using mathematical notation?](#) 4 I suspect that this question can be better articulated as: how can we compute the floor of a given number using real number field operations, rather than by exploiting the printed notation, which separates the real and fractional part, making nearby integers instantly identifiable. How about as Fourier series? [Integration of some floor functions - Mathematics Stack Exchange](#) The floor function turns continuous integration problems in to discrete problems, meaning that while you are still "looking for the area under a curve" all of the curves become rectangles. **Rounding to nearest integer symbol in Latex** 17 There are some threads here, in which it is explained how to use $\lceil x \rceil$ \rceil $\lfloor x \rfloor$ \rfloor . But generally, in math, there is a sign that looks like a combination of ceil and floor, which means round, aka nearest integer. Is there a way to draw this sign in Latex's math mode?
