**Ingeniería ambiental: contaminación y tratamientos** Ramón Sans Fonfría,Ramón Sans,Joan de Pablo Ribas,1989 Se ofrece una visión global a todos aquellos productos y procesos, que de alguna manera pueden producir contaminación, en los suelos, aguas y atmósfera. Se tratan los residuos sólidos, por la posibilidad que éstos tienen de producir contaminación en aguas subterráneas y superficiales, así como en el aire. Se diferencian los residuos urbanos, de los tóxicos y peligrosos. Se hace una especial mención a los residuos radioactivos dadas sus especiales características. Respecto a la contaminación atmosférica; se comentan aspectos meteorológicos que influyen de manera importante en la dispersión de los contaminantes. Se indican los tipos de contaminantes, ya sean gaseosos o en forma de partículas, haciendo hincapié en los sistemas de tratamiento, así como los procesos industriales más importantes que pueden generar este tipo de contaminantes. Por las características especiales de los motores de combustión, se comentan las emisiones que éstos pueden producir. En cuanto a contaminación de aguas, se indica el tipo de contaminantes que por vertidos pueden producir algunas industrias, así como los principales procesos de depuración y tratamiento a que pueden someterse unas aguas procedentes de un proceso industrial, para su eventual reciclaje al proceso industrial o para que su evacuación a las redes de alcantarillado, cumpla con las normativas vigentes de vertidos. Sobre el autor; BR" Ramón Sans Fonfría. Ingeniero Técnico Químico. Ingeniero Industrial de la especialidad de Técnicas Energéticas. Profesor encargado de la Cátedra de Química Analítica de la EUITI de Terrassa de la UPC, y actualmente Profesor Titular en el departamento de Ingeniería Química de la UPC. Miembro del Consejo Social de dicha Universidad.BRBRSu actividad docente se raliza en el campo de la química analítica y su actividad investigadora se desarrolla en el análisis de aguas y suelos, colaborando con diversas empresas e instituciones.BRBRAActualmente, su campo de investigación se dirige a la determinación de trazas de pesticidas en productos agrícolas, aditivos en alimentación, así como a la optimización de los enjuagues y reciclaje de las aguas, en industrias de acabado de superficies.BRBR" Joan de Pablo Ribas. Doctor en Ciencias Químicas por la Universidad Autónoma de Barcelona.

Realizó parte de su tesis doctoral en el Royal Institute of Technology de Estocolmo, como investigador invitado, trabajando sobre el almacenamiento de calor a partir de la utilización de energías alternativas. Actualmente es profesor Titular del Departamento de Ingeniería Química de la Universidad Politécnica de Cataluña, desarrollando su actividad investigadora en temas relacionados con el medio ambiente, sobre el cual ha publicado diversos artículos científicos en revistas internacionales especializadas.

**Tratamiento físico-químico de aguas residuales** M. I. Aguilar,2002 En este libro se aborda el estudio del tratamiento físico-químico de aguas residuales coagulación-flocculación. Tras una descripción del proceso que incluye la estabilidad coloidal de las partículas presentes, la desestabilización de las mismas y las teorías sobre coagulación-flocculación, se mencionan los productos coagulantes y coadyuvantes más utilizados. Se explican los factores que influyen en el proceso, la fenomenología de las partículas flocculadas y la producción de fangos, realizándose una descripción de cómo se llevan a cabo los ensayos de coagulación-flocculación a escala de laboratorio. A título de ejemplo se incluye un caso práctico de aplicación a un efluente de matadero.

**Infraestructuras Hidráulico-Sanitarias II. Saneamiento y drenaje urbano** Arturo Trapote Jaume,2014-02-03 El presente manual supone una herramienta didáctica de gran utilidad para los alumnos de Ingeniería Sanitaria y de otras materias afines impartidas en la carrera de Ingeniería Civil. El libro se concibe como la segunda parte de Infraestructuras Hidráulico-Sanitarias I. Abastecimiento y distribución de agua. La bibliografía compilada en esta ocasión se centra en cuestiones relativas a la normativa vigente, las técnicas y los proyectos vinculados al saneamiento y al drenaje urbano. Arturo Trapote Jaume es Doctor Ingeniero de Caminos, Canales y Puertos por la Universidad Politécnica de Madrid, y profesor de Ingeniería Sanitaria en la Escuela Politécnica Superior de la Universidad de Alicante.

**Integrated Pollution Prevention and Control for the Municipal Water Cycle in a River Basin Context** Alberto Galvis-Castaño,2019-08-14 The protection of water resources from deterioration in quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades. In practice, most countries have adopted pollution control strategies and measures which are based on 'end-of-pipe' solutions: wastewater treatment plants and adjustments to the regulations, including taxes for wastewater discharges (Conventional Strategy). Although this approach involves very high costs, on many occasions, this strategy has been a complete failure. The research described in

this book contribute to the development of sustainable solutions for the previously outlined problem. It was based on the validation of the Three-Step Strategic Approach concept (3-SSA), which includes: 1) prevention or minimisation of waste production; 2) treatment aimed at recovery and reuse of waste components, and 3) disposal of remaining waste with stimulation of natural self-purification of the receiving water body. The study showed overall positive effects of the 3-SSA, in comparison of Conventional Strategy, on wastewater management in the Upper Basin (389 km) of the Cauca river, the second most important river in Colombia. The Cost Benefit Analysis clearly favoured the 3-SSA, generating a major impact on the river water quality at lower cost compared to the Conventional Strategy.

Progress in Aquatic Ecosystem Research A. R. Burk, 2005 Ecology is the study of the interrelationships between organisms and their environment, including the biotic and abiotic components. There are at least six kinds of ecology: ecosystem, physiological, behavioural, population, and community. Specific topics include: Acid Deposition, Acid Rain Revisited, Biodiversity, Biocomplexity, Carbon Sequestration in Soils, Coral Reefs, Ecosystem Services, Environmental Justice, Fire Ecology, Floods, Global Climate Change, Hypoxia, and Invasion. This new book presents new research on aquatic ecosystems from around the world.

**Water Pollution XII** C. A. Brebbia, 2014 Water Pollution XII contains the proceedings of the 12th International Conference in the series of Modelling, Monitoring and Management of Water Pollution. The book will be of interest to scientists, managers and academics from different areas of water contamination.

Fisicoquímica y microbiología de los medios acuáticos Marín Galvín, Rafael, 2019-01-01 El estudio del agua, su control de calidad, así como su tratamiento y depuración, es sin duda una parcela pujante en la sociedad actual con notable cantidadde técnicos ocupados en la misma. Se antoja pues, interesante, contar con obras que conjunten aspectos de sesgo más académico, tales como los relativos a fenómenos fisicoquímicos, y microbiología y microorganismos acuáticos (tanto en aguas naturales como modificadas por el hombre), con otros más técnicos relacionados con el tratamiento y depuración industrial de aguas, y aún con aquellos que fundamenten la aplicación de las normativas aplicables al sector, y no necesariamente dirigidos a especialistas. Todo lo dicho intenta conjugarse en este libro que recoge en sus tres primeros capítulos una visión sistemática sobre la dinámica fisicoquímica y microbiológica natural de las aguas, desarrollando los mecanismos que determinan la presencia y la concentración final de especies químicas y microorganismos en los medios acuáticos, con o sin la posibilidad de alteración de su estado original por causas naturales o antropogénicas. En el capítulo cuarto se recogen las bases de los procesos usuales de tratamiento y depuración industrial de aguas, reseñando primero los principios fisicoquímicos y microbiológicos de los procesos unitarios aplicados, y después sutraslado a la práctica a escala industrial. El quinto capítulo realiza una exposición actualizada de las normativas sectoriales más relevantes (españolas yaún europeas) de obligado cumplimiento para aguas naturales, de consumo humano, residuales, regeneradas y aguas de piscinas, resaltando

sus puntos más relevantes. El capítulo sexto presenta una aproximación a la problemática de los contaminantes emergentes, verdadera fuente de preocupación en el mundo actual, seguido de un capítulo séptimo recopilando las técnicas aplicables en control fisicoquímico, microbiológico, virológico y radiológico de aguas, con especial atención a las consideradas como métodos de referencia. Finaliza esta obra con la reseña bibliográfica (capítulo octavo) nacional e internacional más reseñable sobre aguas, incluyendo revistas imprescindibles para todos los interesados en este apasionante campo.

**Química en Murcia, 2002** Antonio Bódalo Santoyo, Elisa Gómez, 2002-12-11 La profesión y la titulación de Químico en la Región de Murcia, han sido sinónimos de todo en los ámbitos, industrial, agrícola, de la enseñanza, y de otras muchas actividades productivas, hasta que recientemente han aparecido otras titulaciones científicas y técnicas, precisamente al amparo de la Facultad de Químicas, única durante siempre, madre generosa, y matriz de aquellas que, comenzando por Biología, y terminando, por ahora, en Ingeniería Química, han ido implantándose. Este libro recoge las aportaciones, que con motivo del 50 Aniversario de la creación de los Colegios de Químicos, han aportado un selecto grupo de profesionales que nos sitúan en sus posiciones de conocimiento y su experiencia.

**Water Reclamation and Sustainability** Satinder Ahuja, 2014-05-15 Many hydrological, geochemical, and biological processes associated with water reclamation and reuse are poorly understood. In particular, the occurrence and effects of trace organic and inorganic contaminants commonly found in reclaimed water necessitates careful analysis and treatment prior to safe reuse. Water Reclamation and Sustainability is a practical guide to the latest water reclamation, recycling, and reuse theory and practice. From water quality criteria and regulations to advanced techniques and implementation issues, this book offers scientists a toolkit for developing safe and successful reuse strategies. With a focus on specific contaminant removal techniques, this book comprehensively covers the full range of potential inorganic/organic contaminating compounds and highlights proven remediation methods. Socioeconomic implications related to current and future water shortages are also addressed, underscoring the many positive benefits of sustainable water resource management. - Offers pragmatic solutions to global water shortages - Provides an overview of the latest analytical techniques for water monitoring - Reviews current remediation efforts - Covers innovative technologies for green, gray, brown and black water reclamation and reuse

**Water Resources in Mexico** Úrsula Oswald Spring, 2011-08-26 Water resources in Mexico are threatened by scarcity, pollution and climate change. In two decades water consumption doubled, producing water stress in dry seasons and semi-arid and arid regions. Water stress rises due to physical and economic stress. In seven parts a multidisciplinary team analyzes hydrological processes in basins and their interaction with climate, soil and biota. Competing water use in agriculture, industry and domestic needs require savings, decontamination processes and desalination to satisfy the growing demand. Water quality affects health and ecosystems. This creates conflicts and cooperation that may be enhanced by public policy, institution building and social organization.

Biotechnology and Bioengineering Eduardo Jacob-Lopes,Leila Queiroz Zepka,2019-11-06 Biotechnology and Bioengineering presents the most up-to-date research on biobased technologies. It is designed to help scientists and researchers deepen their knowledge in this critical knowledge field. This solid resource brings together multidisciplinary research, development, and innovation for a wide study of Biotechnology and Bioengineering.
