Steven M. Oberhelman

Canon of Medicine Volume 4: Systemic Diseases, Orthopedics and Cosmetics Avicenna, 2015-02-02 Volume 4, translated for the first time in English, contains seven parts. Part 22: On Dysfunctions in Various Parts of the Body, Avicenna gives a detailed analysis of the pain that comes from various physical dysfunctions. Part 23: On Fevers is a famous section of his Canon, often published on its own in the Latin translation. Part 24: On Diagnosis Based on Symptoms includes a discussion on what a medical crisis is and how to deal with it. Part 25: On Swellings and Pimples includes these illnesses as part of Systemic Diseases along with Part 26: On the Loss of Continuity. Part 26 essentially deals with the importance of energy in Avicennian medicine and the resulting illnesses when the movement of energy is disrupted causing a loss of continuity in its flow. Christian-Muslim Relations. A Bibliographical History. Volume 6 Western Europe (1500-1600) David Thomas, John A. Chesworth, 2015-01-08 Christian-Muslim Relations. A Bibliographical History, volume 6 (CMR 6), covering the years 1500-1600, is a continuing volume in a history of relations between followers of the two faiths as it is recorded in their written works. Together with introductory essays, it comprises detailed entries on all the works known from this century. This volume traces the attitudes of Western Europeans to Islam, particularly in light of continuing Ottoman expansion, and early despatches sent from Portuguese colonies around the Indian Ocean. The result of collaboration between numerous leading scholars, CMR 6, along with the other volumes in this series, is intended as a fundamental tool for research in Christian-Muslim relations. The Greening of Pharmaceutical Engineering, Applications for Physical Disorder Treatments M. R. Islam, Jahanara Monaf, A. O. Islam, 2023-02-13 The Greening of Pharmaceutical Engineering This fourth volume in a groundbreaking new four-volume set offers new philosophies and ideas for diagnosing and treating physical disorders, with a view toward bringing the pharmaceutical industry closer to chemical, environmental, and economic sustainability. This fourth

and final volume in a four-volume series on the greening of pharmaceutical engineering presents evidence for the applications of new theories advanced in the first two volumes. Similar to the Volume three, which was for mental health, this volume presents applications for the diagnosis and treatment of physical disorders. Based on the groundwork laid in the first two volumes, the authors now embark on significant, real-life scenarios that apply their theory to physical disorder treatments. In keeping with the tradition of engineering solutions, practical yet sustainable solutions are presented. The fundamental flaws of the conventional approach to medicine is well known. However, this book does not stop at unearthing criticism of western medicine. It offers hope and recommends a series of solutions for both prevention and treatment of physical ailments. Both evidence in studies and the theory behind various treatments are analyzed. Furthermore, food and energy sources are discussed in general as they both directly impact human health. Physical and emotional activities are the other tangible and intangible factors that play a role in human health are discussed. All major diseases, scientific diagnoses, and their common treatments are presented and analyzed. Recommendations for lifestyle changes that could prevent and reverse syndromes are discussed with comprehensive analysis and evidence in medicinal studies. Seasonal flus as well as Covid-19 and other recent viruses with deadly consequences are discussed and ways to manage them through diet, exercises, and meditation are presented. Treatment plans, along with food recipes for specific ailments are presented with discussion of the logic behind these remedies. Valuable as a learning tool for beginners in this area as well as a daily reference for engineers and scientists working in these areas, this is a must-have for any library.

Iconophages Jérémie Koering, 2024-08-20 An unprecedented art-historical account of practices of image ingestion from ancient Egypt to the twentieth century Eating and drinking images may seem like an anomalous notion but, since antiquity, in the European and Mediterranean worlds, people have swallowed down frescoes, icons, engravings, eucharistic hosts stamped with images, heraldic wafers, marzipan figures, and other sculpted dishes. Either specifically made for human consumption or diverted from their original purpose so as to be ingested, these figured artifacts have been not only gazed upon but also incorporated—taken into the body—as solids or liquids. How can we explain such behavior? Why take an image into one's own body, devouring it at the risk of destroying it, consuming rather than contemplating it wisely from a distance? What structures of the imagination underlie and justify these desires for incorporation? What are the visual configurations offered up to the mouth, and what are their effects? What therapeutic, religious, symbolic, and social functions can we attribute to these forms of relations with icons? These are a few of the questions raised in this investigation into iconophagy. *Iconophages* aims to retrace, for the first time, the history of iconophagy. Jérémie Koering examines this unexplored facet of the history of images through an interdisciplinary approach that ranges across art history, cultural and material history, anthropology, philosophy, and the history of the body and the senses. He analyzes the human investment, in terms of culture and imagination, at stake in this seemingly paradoxical way of experiencing images. Beyond the hidden knowledge unearthed

here, these pages bring to light a new way of understanding images, just as they illuminate the occasionally outlandish relations we maintain with them.

Literature and Medicine: Volume 1 Clark Lawlor, Andrew Mangham, 2021-06-24 Offering an authoritative and timely account of the relationship between literature and medicine in the eighteenth century and Romantic period, a time when most diseases had no cure, this collection provides a valuable overview of how two dynamic fields influenced and shaped one another. Covering a period in which both medicine and literature underwent frequent and sometimes radical change, the volume examines the complex mutual construction of these two fields via various perspectives: disability, gender, race, rank, sexuality, the global and colonial, politics, ethics, and the visual. Diseases, fashionable and otherwise, such as Defoe's representation of the plague, feature strongly, as authors argue for the role literary genres play in affecting people's experience of physical and mental illness (and health) across the volume. Along with its sister publication, *Literature and Medicine in the Nineteenth Century*, this volume offers a major critical overview of the study of literature and medicine.

The Nature of Melancholy Jennifer Radden, 2002-04-04 Spanning 24 centuries, this anthology collects over thirty selections of important Western writing about melancholy and its related conditions by philosophers, doctors, religious and literary figures, and modern psychologists. Truly interdisciplinary, it is the first such anthology. As it traces Western attitudes, it reveals a conversation across centuries and continents as the authors interpret, respond, and build on each other's work. Editor Jennifer Radden provides an extensive, in-depth introduction that draws links and parallels between the selections, and reveals the ambiguous relationship between these historical accounts of melancholy and today's psychiatric views on depression. This important new collection is also beautifully illustrated with depictions of melancholy from Western fine art.

Understanding Diabetes R. F. Dods, 2013-02-13 A clear explanation of the cause, diagnosis, and treatment of diabetes. Written for a broad range of readers, including students, researchers, policymakers, health care providers, and diabetes patients and caregivers, this book explains the underlying biochemistry and physiology of diabetes mellitus. Each chapter contains a glossary that defines key terms, a summary that highlights essential concepts discussed in each section of the chapter, as well as a set of simple problems to help readers gain a richer and deeper understanding of diabetes, from its history to treatment options. *Understanding Diabetes* begins with an overview of the disease, its worldwide prevalence and cost, and its connection to the global obesity epidemic. The author then explores the history of diabetes, including the first documented description of the disease dating back to 3400 BCE in Ancient Egypt. The next chapter, *A Glucose Metabolism Primer*, sets forth the pathways for the metabolism of glucose. Next, the book covers: Regulation of glucose metabolism and glucose metabolism gone wrong Diabetes classification system Diagnosis, including current laboratory tests Complications, such as retinopathy, neuropathy, and cardiovascular disease Hereditary transmission Prevention and treatment, including

emerging research Although a cure has still not been found, this book demonstrates that researchers are continuing to make major breakthroughs on all fronts in the fight against diabetes, including a better understanding of its causes and an improved ability to diagnose and treat the disease.

Construction and utilization of digital twins for personalized therapeutic predictions Samuel Schäfer, 2024-10-18 Modern healthcare faces a significant challenge, namely that 25-70% of patients with common diseases do not benefit from standard treatments despite the availability of over 13,000 drugs registered in DrugBank. This discrepancy is likely due to these diseases' complex and heterogeneous molecular nature rather than a lack of therapeutic options. Emerging technologies have revealed the immense molecular complexity underlying common diseases. For instance, singlecell RNA sequencing (scRNA-seq) has demonstrated altered gene interactions in and across multiple cell types in numerous tissues. Furthermore, these technologies have revealed vast molecular differences between patients with the same diagnosis. There is a wide gap between this complexity and the current diagnostic and therapeutic approaches. Aim: To bring personalized medicine one step closer to the clinic; this thesis focuses on developing digital disease models that can capture the molecular biological complexity of disease in individual patients. We aim to harness these disease models to identify optimal treatments for each individual patient. Paper I: We started by exploring the usefulness of OMIC-based approaches for diagnostic and therapeutic predictions. Utilizing a single-cell RNA-sequenced mouse model of antigen-induced arthritis, we aimed to prioritize cell types and therapeutic targets. Initial pathway enrichment analyses did not yield relevant prioritization, prompting an investigation into network-based approaches. Multi-cellular disease models (MCDMs) for AIA and human rheumatoid arthritis were constructed, incorporating predicted cell type interactions. Centrality analysis indicated that these interactions could quantify a cell type's relative importance in disease pathogenesis. We hypothesized that transcriptomic alterations in central cell types might reflect the MCDM, serving as potential diagnostic markers. An analysis of CD4+ T cells from patients with 13 different inflammatory diseases and healthy controls demonstrated that these profiles could discriminate between healthy and diseased states and among diseases. Furthermore, a network-based approach identified drugs targeting disease-associated changes common to multiple inflammatory diseases. Notably, one of these drugs, bezafibrate, successfully dampened inflammation in the AIA mouse model. Paper II: Building on the insights from Paper I, we investigated multicellular network models (MNM) with time as an additional dimension. Using seasonal allergic rhinitis (SAR) as a disease model, we analyzed time-series scRNAseq data to construct MNMs of inflammatory diseases. We identified thousands of disease-associated expression changes across multiple cell types, varying at different disease stages. Notably, upstream regulators (URs) of these changes were also stage-dependent and multidirectional. To prioritize URs for drug discovery, we focused on those causing significant expression changes in multiple cell types across all time points. This strategy was validated through similar analyses of atopic dermatitis, ulcerative colitis, and Crohn's disease, confirming that ranked URs

aligned with the efficacy of existing drugs targeting the URs in the respective diseases. Furthermore, experimental validation included targeting the top-ranked regulatory gene in SAR, which was more effective than previously discovered IL4 inhibition. Paper III: While Paper I established the use of transcriptomic data for therapeutic predictions, it focused on overlapping disease-related changes across multiple inflammatory diseases and considered transcriptomic changes in only one cell type. Paper II indicated a potential benefit in UR prioritization in numerous cell types. However, it yielded heterogeneous results and was limited by the fact that few drugs directly target URs. Neither of these approaches was feasible for individualized drug predictions. Drawing on previous insights by us and others, we next aimed to develop digital disease models for individual patients, termed digital twins, with the capability for drug efficacy screening. We proposed scDrugPrio, a strategy utilizing single-cell scRNA-sequencing-based multicellular disease models incorporating key biological and pharmacological properties, such as varying gene expression levels, varying gene interactions within and between cell types, and drug effect. scDrugPrio was constructed based on a mouse model of arthritis and validated by improved precision/recall for known drugs and in vitro studies of predicted drugs that were FDA approved for other diseases and had not yet been tried in rheumatoid arthritis or mouse arthritis. For validation, scDrugPrio was applied to human multiple sclerosis as well as Crohn's disease data that included tissue samples from healthy and sick tissue of all patients; scDrugPrio was able to identify relevant treatments for individual patients and could distinguish anti-TNF responders from non-responders. Conclusion: This thesis demonstrates a framework for constructing digital disease models for personalized therapeutic predictions that might hold potential for better clinical treatment decisions. By leveraging advanced genome-wide analyses and network-based approaches, we may enhance the precision and efficacy of treatments for immune-mediated inflammatory diseases, bringing personalized medicine closer to clinical reality.

Roots of Ecology Frank N. Egerton, 2012-07-17 Ecological questions are at the center of many of the most important decisions faced by humanity. *Roots of Ecology* documents the deep ancestry of this enormously important science from the early ideas of Herodotus, Plato, and Pliny; up through those of Linnaeus and Darwin, to those that inspired Ernst Haeckel's mid-nineteenth-century neologism ecology. Based on a long-running series of regularly published columns, this important work gathers a vast literature that illustrates the development of the ecological concepts, environmental ideas, and creative reasoning that have led to our modern view of ecology. *Roots of Ecology* should be on every ecologist's shelf.--Back cover.

Speculum Lapidum Camillo Leonardi, 2023-08-29 In early modern Europe precious and semiprecious stones were valued not only for their beauty and rarity but also for their medical and magical properties. Lorenzo de' Medici, Philip II of Spain, and Popes Leo X and Clement VII were all treated with expensive potions incorporating ground gems such as rubies, diamonds, and emeralds. Medical and magical/astrological lapidaries, texts describing the stones' occult and medical qualities as well as their abilities to ward off demons and incantations, were essential resources for their use. First published

in Venice in 1502, Camillo Leonardi's *Speculum Lapidum* is an encyclopedic summary of all classical and medieval sources of lithotherapy. In describing the natural, manifest, and occult properties of precious and semiprecious stones as well as their graven images and applications, the *Speculum Lapidum* provides tremendous insight into the role that medical astrology and astral magic played in the life of an Italian court in the early modern period. Liliana Leopardi's English translation, complete with critical apparatuses, gives unprecedented access to this key text within the magical lapidary genre. A vital addition to the existing canon of lapidaria in translation, Leopardi's work will be of special importance for students and scholars of the history of magic, medicine, religion, and Renaissance humanism, and it will fascinate anyone interested in the occult properties of precious and semiprecious stones.

Natural Health Sciences Rasit Dinc, 2025-02-25 *Natural Health Sciences: A Comprehensive Guide* serves as a valuable resource for both healthcare practitioners and business professionals, supporting ongoing professional development by bridging the gap between proponents of traditional or natural health systems and those who follow scientific or medical perspectives. The book synthesizes existing literature and fosters a more nuanced understanding of the benefits and limitations of natural health practices. By presenting academic and scientific evidence in an accessible format, it offers evidence-based insights into a broad spectrum of natural health approaches. These include herbal remedies, nutritional strategies, lifestyle interventions, and alternative therapies, covering key areas such as Ayurveda, bioenergetic therapy, music therapy, Traditional Chinese Medicine (TCM), and aromatherapy. It also addresses criticisms, ethical and regulatory concerns, and the future of natural health sciences. With the increasing awareness of the limitations and side effects of conventional medicine, people are seeking natural, preventive, and personalized approaches to maintain and improve their health. *Natural Health Sciences: A Comprehensive Guide* provides a comprehensive overview of natural health sciences and its various sub-disciplines, allowing readers to gain a deeper understanding of these practices and make informed decisions about their health.

Tome 3: Remedies. Pharmacy, Drugs, Archaeology, Tradition Steven M. Oberhelman, 2025-07-21 This three-volume set of essays is dedicated to Alain Touwaide, known for his far-reaching investigations in fields such as ancient medicine, botany, pharmacy, texts and manuscripts, the classical tradition, translation, the history of science, ethnopharmacology, and

plant therapies. The essays, penned by 80 international scholars and researchers and written in six languages, are grouped into three broad categories—Manuscripts, Plants, and Remedies—to reflect Alain's main areas of research. Each category is broken into subgroups, such as manuscripts, texts, and science; botany; gardens, materia medica, pharmacy, drugs, archaeology, medical traditions, and continuity of scientific knowledge in the East and West. The papers reach across many fields of scholarship, science, and medicine and are, necessarily and fundamentally, trans-disciplinary, trans-chronological, and trans-geographic. These volumes are not so much a Festschrift as an approach to Alain's work through many disciplines and methods, a discussion of the current status of each field, and an opening into new perspectives.

Avoiding the Dire Straits Mathieu Torck, 2009 Scurvy is known to be one of the most gruesome pathological phenomena that, in the course of centuries, has made innumerable victims. Long distance seafaring operations, war zones, prisons and crop failures all created breeding grounds for the vitamin C deficiency disease, which was commonly characterized by swelling and bleeding gums and internal haemorrhages in the limbs. While the history of scurvy is rather well-known from a Western perspective, the higher proneness to scurvy of Asian peoples in comparison to Europeans, Polynesians and other peoples, as proven in recent biochemical studies, compelled to broaden that horizon and look for scurvy in China and beyond. The purpose of this book is to trace the history of the disease in China, Japan and Southeast Asia and to highlight the ways in which peoples from these regions in pre-modern and early modern times dealt with provisioning in their seafaring and military enterprises. This cross-cultural quest for scurvy and food supplies, involving such areas as maritime and military history and the medical traditions from East and West, is ultimately meant as an attempt to elucidate whether historical sources can confirm the biochemical findings.

A Catalogue of Books Printed in the Fifteenth Century Now in the Bodleian Library Bodleian Library, Alan Coates, 2005 The Bodleian's incunabula catalogue describes the Library's fifteenth-century western printed books to the same standards expected in the best modern catalogues of medieval manuscripts. It records and identifies all texts contained in each volume, and the detailed analysis of the textual content is an innovative feature. Further information about authors, editors, translators, and dedicatees is given in an extensive index of names, complete with biographical and other information; this index will be of interest to textual scholars from the classical period to the renaissance. The detailed descriptions of the copy-specific features of each book (the binding, hand-decoration and hand-finishing, marginalia, and provenance) form another important contribution to scholarship. The provenance index will be of great value to all those interested in the history of the book from the 1450s to the present day.
