Tecnología de proceso y transformación de materiales Maria Nuria Salán Ballesteros,2009-07 Los principales objetivos de esta asignatura son la introducción de los distintos tipos de materiales de aplicación industrial, el establecimiento de relaciones estructura-propiedades de cada grupo de materiales y la descripción de los principales procesos de transformación que se desarrollan industrialmente para convertir un material en un componente final. Para ello, se parte del conocimiento básico de la estructura de los materiales de ingeniería (metales, materiales cerámicos, polímeros y compuestos), así como del comportamiento y las características que se asocian con dicha estructura. Se describen los procesos de transformación de componentes, cuya selección se justifica sobre la base de las características de los materiales que se han de transformar, y se indican algunos de los tratamientos más comunes que permiten modificar el comportamiento macroscópico de un componente para adecuarlo a las solicitudes requeridas. En la descripción de los procesos, se introducen los criterios a considerar a la hora de realizar la selección del material más adecuado, en la medida de lo posible.

RECURSOS GEOLÓGICOS. UNA PERSPECTIVA MINERAL Y AMBIENTAL GARCÍA DEL AMO, Dolores ,REGUEIRO Y GONZÁLEZ-BARROS, Manuel ,2024-11-04 El suministro seguro de materias primas para la industria es clave para el mantenimiento de nuestro modo de vida. Los recursos minerales son parte fundamental de este suministro, siendo la geología la ciencia básica para su estudio y prospección. Los aspectos tecnológicos y medioambientales de la extracción y el uso de estos recursos deben dotarse de una visión sostenible para garantizar su utilización futura. Por ello, la Comisión Europea ha propuesto un conjunto integral de medidas para garantizar el acceso de la UE a un suministro seguro, diversificado, asequible y sostenible de materias primas fundamentales. La Ley de Materias Primas Fundamentales también mejora la capacidad de la UE para supervisar y mitigar los riesgos de perturbaciones, e incrementa la circularidad y la sostenibilidad.
