Threat And Error Management

Threat and Error Management (TEM) in Air Traffic Control ,2008 This circular describes an overarching safety framework intended to contribute to the management of safety in aviation operations and known as Threat and Error Management (TEM). TEM is based on a model developed by the Human Factors Research Project of the University of Texas in Austin (United States): the University of Texas Threat and Error Management Model (UTTEM). ...--Page iii.

Safety at the Sharp End Rhona Flin,Paul O'Connor,2017-05-15 Many 21st century operations are characterised by teams of workers dealing with significant risks and complex technology, in competitive, commercially-driven environments. Informed managers in such sectors have realised the necessity of understanding the human dimension to their operations if they hope to improve production and safety performance. While organisational safety culture is a key determinant of workplace safety, it is also essential to focus on the non-technical skills of the system operators based at the 'sharp end' of the organisation. These skills are the cognitive and social skills required for efficient and safe operations, often termed Crew Resource Management (CRM) skills. In industries such as civil aviation, it has long been appreciated that the majority of accidents could have been prevented if better non-technical skills had been demonstrated by personnel operating and maintaining the system. As a result, the aviation industry has pioneered the development of CRM training. Many other organisations are now introducing non-technical skills training, most notably within the healthcare sector. Safety at the Sharp End is a general guide to the theory and practice of non-technical skills for safety. It covers the identification, training and evaluation of non-technical skills and has been written for use by individuals who are studying or training these skills on CRM and other safety or human factors courses. The material is also suitable for undergraduate and post-experience students studying human factors or industrial safety programmes.

Crew Resource Management Barbara G. Kanki,José Anca,Robert L. Helmreich,2010-01-20 Crew Resource Management, Second Edition continues to focus on CRM in the cockpit, but also emphasizes that the concepts and training applications provide generic guidance and lessons learned for a wide variety of crews in the aviation system as well as in the complex and high-risk operations of many non-aviation settings. Long considered the bible in this field, much of the basic style and structure of the previous edition of Crew Resource Management is retained in the new edition. Textbooks are often heavily supplemented with or replaced entirely by course packs in advanced courses in the aviation field, as it is essential to

provide students with cutting edge information from academic researchers, government agencies (FAA), pilot associations, and technology (Boeing, ALION). This edited textbook offers ideal coverage with first-hand information from each of these perspectives. Case examples, which are particularly important given the dangers inherent in real world aviation scenarios, are liberally supplied. An image collection and test bank make this the only text on the market with ancillary support. - The only CRM text on the market offering an up-to-date synthesis of primary source material - New edition thoroughly updated and revised to include major new findings, complete with discussion of the international and cultural aspects of CRM, the design and implementation of LOFT - Instructor website with testbank and image collection - Liberal use of case examples

Patient Safety in Emergency Medicine Pat Croskerry,Karen S. Cosby,2009 With the increased emphasis on reducing medical errors in an emergency setting, this book will focus on patient safety within the emergency department, where preventable medical errors often occur. The book will provide both an overview of patient safety within health care—the 'culture of safety,' importance of teamwork, organizational change—and specific guidelines on issues such as medication safety, procedural complications, and clinician fatigue, to ensure quality care in the ED. Special sections discuss ED design, medication safety, and awareness of the 'culture of safety.'

Human Error in Aviation R.Key Dismukes,2017-07-05 Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

The Aviation Safety Action Program Michelle Loren Harper,2011 The Aviation Safety Action Program (ASAP) is a voluntary, non-jeopardy reporting program supported by commercial airlines. The program provides pilots with a way to report unsafe occurrences, including their own errors, without risk of punitive action on the part of the airlines or the Federal Aviation Administration (FAA). Through a set of on-site visits to airlines with ASAP programs, deficiencies were identified in the way airlines collect ASAP reports from pilots. It was concluded that these deficiencies might be limiting the ability of airlines to identify hazards contributing to reported safety events. The purpose of this research was to determine if the use of an ASAP reporting form based on a human factors model, referred to as the Threat and Error Management (TEM) model, would result in pilots providing a larger quantity and higher quality of information as compared to information provided by pilots using a standard ASAP reporting form. The TEM model provides a framework for a taxonomy that includes factors related to safety events pilots encounter, behaviors and errors they make, and threats associated with the

complexities of their operational environment. A comparison of reports collected using the TEM Reporting Form and a standard reporting form demonstrated that narrative descriptions provided by pilots using the TEM Reporting Form included both a larger quantity and higher quality of information. Quantity of information was measured by comparing the average word count of the narrative descriptions. Quality of information was measured by comparing the discriminatory power of the words in the narrative descriptions and the extent to which the narrative descriptions from the two sets of reports contributed to a set of latent concepts. The findings suggest that the TEM Reporting Form can help pilots provide longer descriptions, more relevant information related to safety hazards, and expand on concepts that contribute to reported safety events. The use of the TEM Reporting Form for the collection of ASAP reports should be considered by airlines as a preferred collection method for improving the quantity and quality of information reported by pilots through ASAP programs.

Human Factors in the Maritime Domain Michelle Grech,Tim Horberry,Thomas Koester,2008-03-27 The piecemeal fashion in which human factors research has been conducted in the maritime domain makes information retrieval available only by scanning through numerous research journals and conference papers. Bringing together human factors information from this and other domains, Human Factors in the Maritime Domain integrates a common body of knowledge into one single volume. The book provides the vital background information necessary to acquire a core knowledge base and a much-needed overview of human factors within the maritime domain. It starts by putting the topic into an historical and theoretical context, moves onto more specific and detailed topics and contemporary thinking in human factors, then reviews new maritime technology. The authors take a holistic approach based on a model of the socio-technical system of work in the maritime domain. They synthesize available knowledge and research, then present in an easily acceptable framework with example, illustrations, and case studies whenever possible, making the text rigorous, useful, and enjoyable. The three authors draw on a range of diverse backgrounds including working as a maritime surveyor, transport consultant, human factors lecturer, and mechanical engineer. They have undertaken maritime research in Denmark, Australia, Malta, and the UK. They have published several other human factor books on related topics. This combination of human factors knowledge, maritime wisdom, and substantial publication experience results in a book that is effective and practical.

Safety Management Systems in Aviation Alan J. Stolzer,2017-11-30 Although aviation is among the safest modes of transportation in the world today, accidents still happen. In order to further reduce accidents and improve safety, proactive approaches must be adopted by the aviation community. The International Civil Aviation Organization (ICAO) has mandated that all of its member states implement Safety Management System (SMS) programs in their aviation industries. While some countries (Australia, Canada, members of the European Union, New Zealand) have been engaged in SMS for a few years, it's just now emerging in the United States, and is non-existent in most other countries. This timely and unique book covers the essential points of SMS. The knowledgeable authors go beyond merely defining it; they discuss the quality management

underpinnings of SMS, the four pillars, risk management, reliability engineering, SMS implementation, and the scientific rigor that must be designed into proactive safety. This comprehensive work is designed as a textbook for the student of aviation safety, and is an invaluable reference tool for the SMS practitioner in any segment of aviation. The authors introduce a hypothetical airline-oriented safety scenario at the beginning of the book and conclude it at the end, engaging the reader and adding interest to the text. To enhance the practical application of the material, the book also features numerous SMS in Practice commentaries by some of the most respected names in aviation safety.

The Oxford Handbook of Leadership and Organizations David V. Day,2014 The Oxford Handbook of Leadership and Organizations brings together a collection of comprehensive, state-of-the-science reviews and perspectives on the most pressing historical and contemporary leadership issues - with a particular focus on theory and research - and looks to the future of the field.

Human-Centered Computing Don Harris,Vincent Duffy,Michael Smith,Constantine Stephanidis,2019-11-11 The 10th International Conference on Human-Computer Interaction, HCI International 2003, is held in Crete, Greece, 22-27 June 2003, jointly with the Symposium on Human Interface (Japan) 2003, the 5th International Conference on Engineering Psychology and Cognitive Ergonomics, and the 2nd International Conference on Universal Access in Human-Computer Interaction. A total of 2986 individuals from industry, academia, research institutes, and governmental agencies from 59 countries submitted their work for presentation, and only those submittals that were judged to be of high scientific quality were included in the program. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of humancomputer interaction, including the cognitive, social, ergonomic, and health aspects of work with computers. These papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas, including offices, financial institutions, manufacturing, electronic publishing, construction, health care, disabled and elderly people, etc.

Introduction to Human Factors for Organisational Psychologists Mark W. Wiggins,2022-05-22 This text introduces industrial and organisational psychologists to the discipline of human factors. It also provides a range of tools necessary for the application of human factors strategies and techniques in practice. The text is intended to respond to the growing demand for organisational psychologists to assist in the development and evaluation of initiatives that are intended to optimise the relationship between workers and the operational environments with which they engage. The book • Contains practical strategies and examples that are intended to guide readers • Combines human factors and organisational psychological concepts in a single volume • Covers context-related examples that illustrate the application of human factors tools and principles • Presents an integrated approach to human factors from an organisational psychological perspective

The text begins by discussing the application of human factors in organisations, together with notions of risk and uncertainty. Frameworks for human factors are considered, including error-based and system safety approaches. It explores the links between individual differences and human factors, and it covers group processes and the impact on team performance, including the role of leadership and followership. The book also presents a range of tools and techniques that can be applied by organisational psychologists to acquire human factors-related information and develop an understanding of the situation or factors that may explain human behaviour.

The Mobility Forum ,2013

Innovation and Consolidation in Aviation Peter Pfister,2017-03-02 This unique book expands the contribution of aviation psychology and human factors to the aviation industry within the Asia Pacific region, with participation from many other parts of the globe, and key local and international experts, developing the safety, efficiency and viability of the industry. It is a forward-looking work, providing new strategies for psychology and human factors to increase the safe and effective functioning of aviation organisations and systems, pertinent to both civil and military operations. This is the formal refereed proceedings of The Fifth Australian Aviation Psychology Symposium, Manly Beach, Sydney 2000. The symposium had a diverse range of contributions and Development Workshops, bringing together practitioners from aviation psychology and human factors, flight operations management, safety managers, pilots, cabin crew, air traffic controllers, engineering and maintenance personnel, air safety investigators, staff from manufacturers and regulatory bodies, and applied aviation industry researchers and academics. This book will be of interest to anyone involved in human factors, safety systems or aviation psychology within both the civil and military aviation industry.

Safety Management Systems in Aviation Professor Alan J Stolzer,Mr Carl D Halford,Mr John J Goglia,2015-08-28 While some countries have been engaged in Safety Management System (SMS) programs for a few years, it is still non-existent in many other countries. In this second edition of Safety Management Systems in Aviation, the authors have extensively updated relevant sections to reflect developments since the original book of 2008. New sections include: a brief history of FAA initiatives to establish SMS, data-driven safety studies, developing a system description, SMS in a flight school, and measuring SMS effectiveness.

Teaming Up: Components of Safety Under High Risk Kateri Jochum,2017-09-29 All accidents and incidents at the workplace, and the resulting consequences, are tied to human beings and their actions. Although their avoidance has been a crucial part of training in aviation for the past twenty years, it has been largely ignored in many other occupations with team structures similar to those in aviation. In such professions and workplaces, those involved are under high stress, with enormous workloads, simultaneously completing mental and motor tasks, facing unexpected situations involving great risk, and with uncertain final outcomes. The goal of researchers is to find ways to minimize human error and to understand the

interaction amongst the members of the team fulfilling the task. Specialized training programmes, good management and clear rules that lay out which member is responsible for making decisions can be the first steps to reducing and managing such errors. This book is a major result of the Gottlieb Daimler and Karl Benz Foundation's 6th Berlin Colloquium, 'Interaction in High Risk Environments', hosted in 2002 by the Psycholinguistic Group of the Humbolt University Institute for German Language and Linguistics. This group is affiliated with the ongoing research group 'Group Interaction in High Risk Environments (GIHRE)' sponsored by the Foundation based in Ladenburg, Germany. The Colloquium brings together experts from aerospace, clinical medicine, nuclear power, psychology, linguistics and psycholinguistics, to include fields that have yet to be a major focus of scientific investigations. Together, the authors explore scientific advances with direct application to a range of high risk environments. The aim is to address the issues and root causes of error and lack of teamwork by combining the knowledge of scientific experts with experience gained in different fields of industry and public life. Chapters span space travel, risk in the cockpit, safety in medicine, nuclear submarine salvage, large construction sites, police

Proceedings of the 13th International Conference on Man-Machine-Environment System Engineering Shengzhao Long,Balbir S. Dhillon,2013-09-30 The integrated and advanced science research topic Man-Machine-Environment system engineering (MMESE) was first established in China by Professor Shengzhao Long in 1981, with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd, 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China!" MMESE primarily focuses on the relationship between man, machines and the environment, studying the optimum combination of man-machine-environment systems. In this system, "man" refers to people in the workplace (e.g. operators, decision-makers); "machine" is the general name for any object controlled by man (including tools, machinery, computers, systems and technologies), and "environment" describes the specific working conditions under which man and machine interact (e.g. temperature, noise, vibration, hazardous gases etc.). The three goals of optimization of Man-Machine-Environment systems are to ensure safety, efficiency and economy. Proceedings of the 13th International Conference on Man-Machine-Environment System Engineering are an academic showcase of the best papers selected from more than 400 submissions, introducing readers to the top research topics and the latest developmental trends in the theory and application of MMESE. These proceedings are interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environment science, management, education, and other related disciplines. Researchers and

professionals working in these interdisciplinary fields and researchers on MMESE related topics will benefit from these proceedings.

Handbook of Human Factors in Air Transportation Systems Steven James Landry,2017-11-22 One of the primary applications of human factors engineering is in the aviation domain, and the importance of human factors has never been greater as U.S. and European authorities seek to modernize the air transportation system through the introduction of advanced automation. This handbook provides regulators, practitioners, researchers, and educators a comprehensive resource for understanding and applying human factors to air transportation.

Safety and Quality in Medical Transport Systems John W. Overton,2019-07-23 The Commission on Accreditation of Medical Transport Systems (CAMTS) has been accrediting air and ground transport services since 1991. One of the most significant needs the Commission has recognized is to assist transport services in creating a culture that supports safety and quality for both crews and patients. Most of the helicopter EMS (emergency medical service) accidents and many ground ambulance accidents can be attributed to human factors and systems designs that lead to poor decision-making. Management commitment is vital to create and maintain a culture that supports risk assessment, accountability, professionalism and organizational dynamics. This reference book has been created by CAMTS to address this need directly and comprehensively. It offers a groundbreaking collection of expert insights and practical solutions that can be used by EMS, Fire and Rescue, public and private services, and professional emergency and transport professionals worldwide. Quoting from the foreword written by the late Robert L. Helmreich, Professor Emeritus of Psychology at The University of

Texas Human Factors Research Project, 'This is an important book which should be required reading for everyone involved in patient transport, from managers and dispatchers to those at the sharp end... The experienced and able authors and editors of this work use culture as the overarching concept needed to maximize safety while delivering patients expeditiously.'
