Restructuring land allocation, water use and agricultural value chains John P. A. Lamers, Asia Khamzina, Inna Rudenko, Paul L. G. Vlek, 2015-01-28 Central Asia underwent an agricultural transformation in the 20th century that was neither efficient nor sustainable. There is a need for innovations that will remedy these deficits by reversing environmental degradation and ensuring poverty alleviation. This book provides science-based findings and recommendations for restructuring land and water use and agricultural value chains to enable ecologically and economically sound practices that increase resource use efficiency, rehabilitate ecosystem functions, and enhance rural incomes. Innovations were designed in concert with stakeholders. The prospective benefits are shown for the Khorezm region, part of the lower Amudarya region, Uzbekistan, but the findings can be extrapolated to regions facing similar agro-ecological challenges.

Human-Insect Interactions Sergey Govorushko, 2018-01-09 This book presents a 360-degree picture of the world of insects and explores how their existence affects our lives: the good, bad, and ugly aspects of their interactions with humankind. **Historical Dictionary of Morocco** Aomar Boum, Thomas K. Park, 2016-06-02 A historical reference work on Morocco must take as its subject al-maghrib al-aqsa (the far west) as the Arabic scholars have generally referred to the approximate region of present-day Morocco, roughly the north-west corner of Africa but at times including much of the Iberian peninsula, because the modern nation-state is a relatively recent creation owing much to events in the late 19th and early 20th centuries. External influences on Morocco tend to come across the narrow straits of Gibraltar to the north, from the east along the Mediterranean littoral, or up from the Sahara. In each case, access is constrained by geography and continued control from outside the region has been difficult to manage over the long term. Although many of the dynasties that came to power in Morocco conquered much broader regions, history and topology have so conspired that there is still more coherence to an historical focus on al-maghrib al-aqsa than is the case for most modern nation-states. This third edition of Historical Dictionary of Morocco contains a chronology, an introduction, a glossary, and an extensive bibliography. The dictionary section has over 600 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent access point for students, researchers, and anyone wanting to know more about Morocco.

**Lifestyles and Feeding Biology** Martin Thiel, Les Watling, 2015 The second volume of The Natural History of the Crustacea Series, covering how crustaceans live in a wide range of environments, with emphasis on how they exploit food sources.

A Comprehensive Study of Volcanic Phenomena, 2025-02-26 This book is a new addition to research works exploring the diversity of volcanic geology. This book has collected works that approach volcanic phenomena via traditional methods and highlights the significance of volcanic geology in correct and realistic volcanic reconstruction through geological mapping and material science. This important and commonly less respected area of volcanology provides the fundamental basis for understanding volcanoes. The book has attracted works that show advanced technologies and their usage in volcano science. Research subjects such as hidden volcanoes deep beneath the sea surface are common targets of complex technology-aided mapping. Geophysical methods that use approaches to locate potential eruptible magma or magmatic fluids are among the most dynamically evolving methods. As one of the ultimate goals of volcanology is to provide geology-based models that identify volcanic hazards to offer science-based approaches for volcanic hazard mitigation, this book also contains some ideas to show eruption scenarios and historical record-based approaches to understand volcanoes and how to live with them. Overall, this book is a nice collection representing the broad and colorful nature of volcano science.

**Monitoring and Control of Macrofouling Mollusks in Fresh Water Systems** Gerald L. Mackie, Renata Claudi, 2009-12-23 Upon its initial publication more than fifteen years ago, this book broke new ground with its comprehensive coverage of the biology and ecology, distribution and dispersal mechanisms, physiology, monitoring, negative and positive impacts, and control of aquatic invasive species of mussels, clams, and snails. Building on this foundation, the second

**Periphyton** Yonghong Wu, 2016-08-29 Periphyton: Functions and Application in Environmental Remediation presents a systematic overview of a wide variety of periphyton functions and applications in environmental remediation, providing readers with an understanding of the biological/ecological features of periphyton, the methodology of their study, and their application in environmental conservation. With increases in environmental stress, anthropogenic impacts, and the global decline in biodiversity, there is a pressing need for methods to assess and improve environmental quality that are rapid, reliable, and cost-effective. Periphyton is an important component of benthic communities and plays a crucial role in the functioning of microbial food webs. Because of a number of advantages, such as a short lifecycle, relative immobility, more rapid responses to environmental stress and anthropogenic impact than any metazoa, ease of sampling, availability of taxonomic/molecular identification, and standardized methodologies for temporal/spatial comparisons, there has, in recent decades, been an increased interest in periphyton as a tool in biological conservation in aquatic ecosystems. - Presents case studies that help readers implement similar ecological designs - Focuses on the function of periphyton in remediating

destructured ecosystems - Provides readers with an understanding of periphyton in practice, especially the value of periphyton in enhancing environmental and ecosystem qualities - Discusses the role of periphyton in purifying water and its effect on abiotic elements

*The Geographical Sciences During 1986—2015* Shuying Leng, Xizhang Gao, Tao Pei, Guoyou Zhang, Liangfu Chen, Xi Chen, Canfei He, Daming He, Xiaoyan Li, Chunye Lin, Hongyan Liu, Weidong Liu, Yihe Lü, Shilong Piao, Qiuhong Tang, Fulu Tao, Lide Tian, Xiaohua Tong, Cunde Xiao, Desheng Xue, Linsheng Yang, Linwang Yuan, Yuanming Zheng, Huiyi Zhu, Liping Zhu, 2016-07-28 In four chapters and an introduction, this book systematically helps readers understand the development of the Geographical Sciences both in China and in the world during the past 30 years. Through data analysis of methodologies including CiteSpace, TDA, qualitative analysis, questionnaires, data mining and mathematical statistics, the book explains the evolution of research topics and their driving factors in the Geographical Sciences and its four branches, namely Physical Geography, Human Geography, Geographical Information Science and Environmental Geography. It also identifies the role of the Geographical Sciences in the analysis of strategic issues such as global change and terrestrial ecosystems, terrestrial water cycle and water resources, land change, global cryosphere evolution and land surface processes on the Tibetan Plateau, economic globalization and local responses, regional sustainable development, remote sensing modelling and parameter inversion, spatial analysis and simulation, and tempo-spatial processes and modelling of environmental pollutants. It then discusses research development and inadequacy of Chinese Geographical Sciences in the above-mentioned topics, as well as in the fields including Geomorphology and Quaternary environmental change, Ecohydrology, ecosystem services, the urbanization process and mechanism, medical and health geography, international rivers and transboundary environment and resources, detection and attribution of changes in land surface sensitive components, and uncertainty of spatial information and spatial analysis. It shows that the NSFC has driven the development in all these topics and fields. In addition, the book summarises trends of the Geographical Sciences in China and the research level in major countries of the world through an overview of geographical education in colleges and universities, the analysis of publications, citations and author networks of SCI/SSCI and CSCD indexed articles, and the description of Sino-USA, Sino-UK and Sino-German cooperation. This book serves as an important reference to anyone interested in geographical sciences and related fields.

**Water Resources Research Progress** Liam N. Robinson, 2008 Water resources are sources of water that are useful or potentially useful to humans. They are important because they are needed for life to exist. Many uses of water include agricultural, industrial, household, recreational and environmental activities. Virtually all of these human uses require fresh water. Only 2.7% of water on the Earth is fresh water, and over two thirds of this is frozen in glaciers and polar ice caps, leaving only 0.007% available for human use. Fresh water is a renewable resource, yet the world's supply of clean, fresh water is steadily decreasing. Water demand already exceeds supply in many parts of the world, and as world population

continues to rise at an unprecedented rate, many more areas are expected to experience this imbalance in the near future. The framework for allocating water resources to water users (where such a framework exists) is known as water rights. This new book presents recent and important research in the field.

**Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth** Laith A. Jawad, 2021-09-12 The system of the Tigris-Euphrates Rivers is one of the great river systems of southwestern Asia. It comprises the Tigris and Euphrates Rivers, which follow roughly parallel courses through the heart of the Middle East. The lower portion of the region that they run through is known as Mesopotamia, was one of the cradles of civilisation. There are several environmental factors that govern the nature of the two rivers and shape the landscape the two rivers running through. Geological events create rivers, climate monitor the water supply, the surrounding land influences the vegetation and the physical and chemical features of water. The Tigris-Euphrates system runs through the territory of four countries, Iraq, Iran, Turkey and Syria. Therefore, any scientific approach to the environment of these two rivers should include the natural history events in these countries. The book *Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth* will be divided into nine parts. These parts deal with the issues of the environment, the status of the flora and fauna, the abiotic aspects, ecology, hydrological regime of the two rivers, the biotic aspects. Water resources, stress of the environment, conservation issues. Since the book of Julian Rzoska *Euphrates and Tigris Mesopotamian Ecology and Destiny* in 1980, no book or major reference has been published that includes between its cover the facts and information that the present book will present. Therefore, the importance of the present book falls in stating the present status of the environment of the two rivers and the comparison of their environment between now and that of 37 years ago as given by J. Rzoska (1980). The recent studies showed that there are a large number of natural and political events that happened within the last three decades in the area of the Tigris-Euphrates river system that for sure have done a great change to the environment of the two rivers and consequently changing the biological and non-biological resources of the two rivers. This book will be a reference book to both Academic and students across the Middle East in different disciplines of knowledge to use in their researches on Tigris-Euphrates river system. The scholars interested in this area will use this book as a guide to compare this freshwater system with other areas in Asia and the world.

**Microalgae Horizons** Ihana Aguiar Severo, Juan Carlos Ordóñez, André Bellin Mariano, José Viriato Coelho Vargas, 2025-06-16 This book provides comprehensive recommendations and insights into the fundamentals, innovations, and industrial applications of microalgae-based processes. Covering both upstream and downstream processes, it addresses challenges and solutions in scaling up microalgae technologies from laboratory to industrial uses. Key topics include cultivation techniques, bioreactor designs, harvesting and drying methods, and applications in food, biofuels, and environmental management. Special emphasis is placed on market trends, socio-political factors, regulatory frameworks,

innovation, and sustainability, ensuring a holistic understanding of this rapidly evolving field. In addition, the final chapters are dedicated to real-world cases, highlighting pilot projects and large-scale installations that tackle practical challenges in engineering and commercialization. As an interdisciplinary science, microalgae technology has significant relevance in academia, industry, and government, driving innovation and contributing to a growing billion-dollar global market for high-value products. This book serves as an essential resource for students, researchers, scientists, engineers, and professionals seeking to deepen their knowledge and stay updated on the latest developments in microalgae research and applications.

Metamorphosis in Fish Sylvie Dufour, Karine Rousseau, B. G. Kapoor, 2012-03-08 This book gathers current data on the two types of fish metamorphoses and their endocrine controls. It will be of interest for fish biologists as well as comparative physiologists and endocrinologists. Metamorphosis is a major developmental phase characterized by morphological and physiological changes. It prepares organisms for a drastic shift in habitat and behavior. Among vertebrates, besides the well-known larval metamorphosis in amphibians, two types of metamorphosis are also described in the life cycle of some fish species. Larval metamorphosis, also called first metamorphosis or true metamorphosis, is encountered in lampreys, representative species of basal vertebrates as well as in some teleost groups, elopomorphs and pleuronectiforms, and possibly also in some other teleost species. Secondary metamorphosis occurs in juveniles of some diadromic migratory teleosts, such as salmon and eels, and compared to larval metamorphosis, involves less drastic morphological changes.
