William Henry Howell

Atlas of Palpation Robin Bauer, Sandro Wolfram, 2024-10-28 This atlas with over 250 illustrations and videos is a modern basic work on palpation for physiotherapists. Members of the medical-therapeutic sector face the daily challenge of having to transfer theoretical knowledge into practice. The Atlas of Palpation addresses this process through its multimedia design. Evidence-based technical texts, the most modern illustrations and practical teaching videos illustrating structures and examination procedures address both students and therapists working in practice. All the essential structures of the body are shown in three-dimensional perspective, so that a basic understanding of interrelationships and movement patterns is conveyed. The palpation grips are explained in an understandable way and described in a comprehensible way. The instructional videos were specially made by the authors and the latest technical equipment in terms of camera, lighting elements and sound ensures the highest possible quality. The book is clearly divided into different body systems, which include bony, articular, ligamentous, muscular, nervous, and vascular system. A clear subdivision into subheadings makes it possible to quickly find the desired content. The multimedia approach of this book represents a unique selling point in the medical-therapeutic sector in the field of palpation. This new type of living book opens up completely new perspectives for readers when using it. Trainees and students will find here an optimal introduction for professional palpation; for already experienced physiotherapists it is an ideal reference book for tricky questions. Complications in Peripheral Vascular Interventions Martin Schillinger, Erich Minar, 2007-05-31 Increasing evidence suggests that particularly in high-risk patients, endovascular solutions offer substantial advantages compared to vascular surgical procedures. Nevertheless, growing numbers of procedures are associated with an increased incidence of complications. Knowledge of specific complications in different vessel areas will support the interventionist in preventing such adverse events and if necessary, provide considerable reassurance if such complications need to be resolved. In *Complications in Peripheral Vascular Interventions*, typical and atypical complications are described for all peripheral vessel areas, and methods for how to handle these events are outlined. The book is divided in two parts. Part 1 reviews general aspects on complications in peripheral interventions, and Part II covers the specific vessel areas. Each chapter on the specific vessel area includes Introduction to the frequency and kind of complications in this vessel area Factors identifying high-risk patients for these complications Complications of specific interventional steps and tools Endovascular techniques to resolve these complications Methods to avoid complications Summary Checklist for emergency equipment Offering practical tips for

the interventionist in the cath lab, high-volume interventionists share their experiences by reviewing complicated cases and outlining different strategies used in real-life scenarios.
